As a first example we may refer to the diagram fig. 1, which indicates a road with a side turning. A small body of women and perhaps a knot of children are stepping off the kerb at the corner to cross over to the other side. A motor cyclist turning into the side road sends the people back on to the kerb because he has not sufficient patience to wait until the women and children have safely crossed over. The right procedure in such a case is obvious; he should slow up and wait until the people have crossed over before turning into the side road; but often one sees the motor cyclist hoot loudly, and apparently try to take advantage of the fact that any person would step back under such rush tactics.

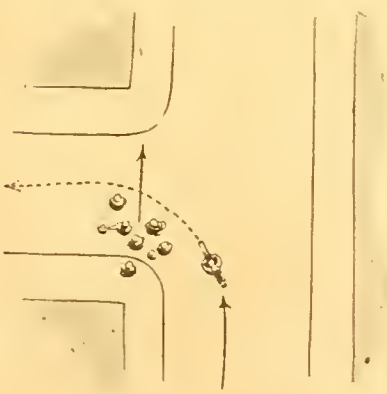

Fig. 1.—Do not be impatient to turn a corner when pedestrians are crossing.

Another example of bad form on the part of unthinking drivers is that shown in fig. 2. Trams are standing beside each other at some well-known tram stop in the main street of a town. A motor cyclist is proceeding in the direction as shown, and there is no chance of passing the tram on the off side owing to a traffic block on the other side of the road. It is Saturday morning, and the small body of shoppers are passing from the left-hand pavement to board the tramcar. The writer has often seen a rider in his hurry, and by making a very big fuss with his hooter, force a gap in the queue of people and pass through. (Be it noted, no policeman or traffic regu-

In the Traffic.—

Fig. 2.—No motor cyclist should force his way through a crowd entering or leaving a tramcar.

lator was present.) As in the previous case, the obvious and right thing for the motor cyclist to do was to have patience and wait until the people had boarded the car, and then proceed on his way.

Having given instances of inconvenience being caused to the public, we may now take a case showing how one motorist may cause risk to another. In the diagram fig. 3 is indicated a car proceeding along a main road on its correct side. A motor cyclist proceeding at a slightly faster pace in the same direction more or less suddenly decides to turn into the side road on the left-hand side; conforming with custom he puts out his left hand and suddenly pulls up the motorist to allow him to turn to the left. Such hasty and reckless procedure, again begotten by impatience, could be avoided by slowing up and allowing the car to proceed on its way before the cyclist turned into the side road.

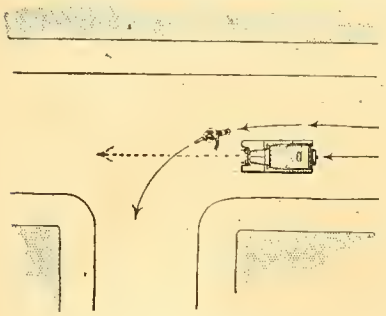

Fig. 3.—Do not cut in front of a car.

In the next illustration, fig. 4, is indicated a main road with central lamp standards and small islands at regular intervals. A motor cyclist proceeds along the road, and, by hugging the crown, passes each island within only a couple of feet. Another rider proceeding at a somewhat faster pace could not possibly pass the first machine under these circumstances, because it very often happens that the distance between the islands is too short to allow the second driver to overtake the first man. Of course, any attempt to pass to the right of an island in the centre of the road is unlawful. The moral in this example of bad driving is always to think of the man who might be coming up behind you and wishes to pass, and that any attempt to hug the crown of the road is selfish and unsportsmanlike.

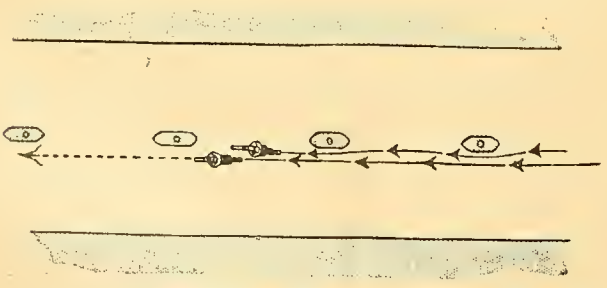

Fig. 4.—Any attempt to hug the crown of a road with central tram standards is selfish if a fellow motorist wishes to pass in the same direction.

In fig. 5 is shown one of those humped, narrow bridges one often finds in the country. If a rider should take this class of bridge at a blind, he runs the risk of having a crash with some car or vehicle coming over the bridge in the opposite direction, for the reason that in many cases he cannot be aware of vehicles approaching the bridge from the other side. Furthermore, it sometimes happens that the actual width of the bridge and its gradient are very deceptive, and where one might think that the width of a bridge is 25ft., it is in reality only 12 or 15ft. The dangers of taking such a bridge at a rush are immensely increased should the road bend sharply to the left or right on the other side.

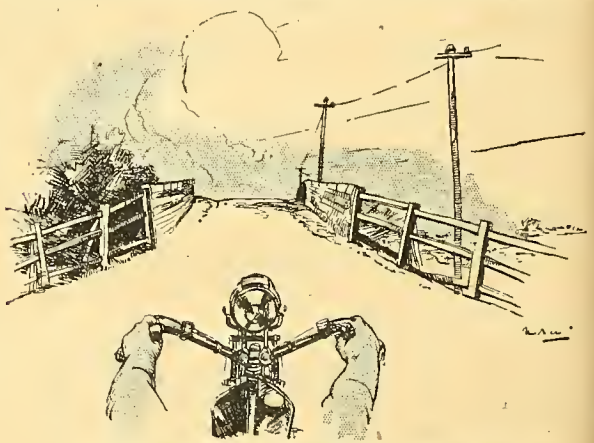

Fig. 5.—The rider who takes a hump back bridge at speed runs the risk of meeting a vehicle on the other side.

An incident of bad driving often seen is illustrated in fig. 6. A rider proceeding along a main road, for some reason or other suddenly decides to turn off to the road on the right-hand side. This decision may be accelerated by the fact that he has suddenly discovered the turning of which he is in search. A cyclist proceeding along the main road in the opposite direction is forced to turn into the side road as well, by the sudden action of the motorist, to avoid collision. Such interruption of the

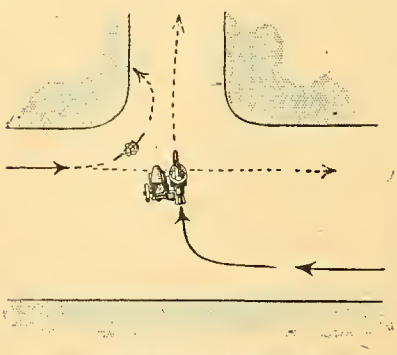

Fig. 6.—Do not make sudden dives into side streets—consideration is due to the traffic on the other side of the road.

In the Traffic.—

cyclist's course could have been avoided entirely by the motorist stopping and allowing the cyclist to proceed on his way, the point being that pedestrians, cyclists, and such folk should always be allowed priority in cases like these.

The risks of poor driving are illustrated in the next two diagrams. Fig. 7 shows a main road with a fairly complicated tramway system; the road surface and tram lines are very greasy, and the motor cyclist is proceeding up the road between the tram lines. The man who is slow in decision will invariably ride between the tram lines, and in order to avoid skidding, turns off the lines at the very worst spot, as shown by a cross.

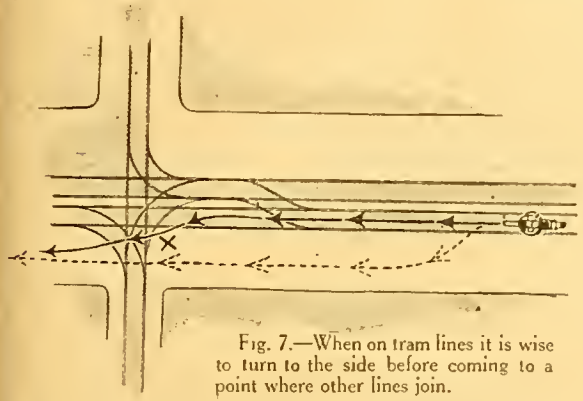

Fig. 7.—When on tram lines it is wise to turn to the side before coming to a point where other lines join.

The dangers of keeping up near to the rear of a tram are two-fold. There is always the chance of the tram pulling up very suddenly, with corresponding danger to the motor cyclist; while, as indicated in fig. 8, there is the risk of a collision with a tram proceeding in the opposite direction should the motor cyclist turn off to the right, and particularly if by chance the section of the road on the left-hand side of the oncoming tram should be blocked. The solution in such a case is to keep well to the rear of any tram at all times.

A Tip Worth Remembering.

In the next diagram, fig. 9, is shown a traffic stop on an up grade, with a string of stationary vehicles, and a motor cyclist at the extreme rear. In such a case the latter should always leave a few feet between

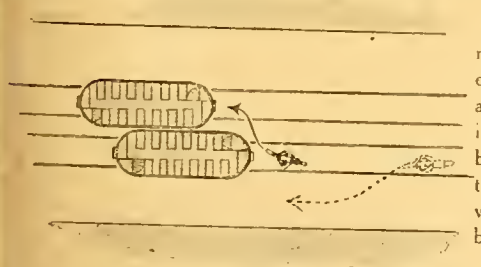

Fig. 8.—Do not follow too closely behind a tram. There is a risk that both sides of the railed vehicle may be blocked.

the vehicle at his immediate front, since, if each vehicle in the traffic stoppage should back down the gradient only a few inches, the sum total of movement may cause the last man's front wheel to be badly bumped.

Two more examples of thoughtlessness and the lack of consideration are shown in the remaining diagrams.

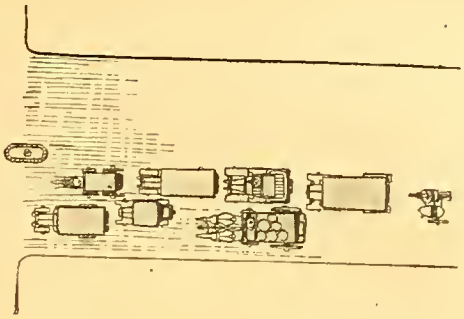

Fig. 9.—In a traffic stop on an up grade it is always safer to leave a few feet between one's machine and the vehicle immediately in front

The first is the case where a sidecar is left standing against the kerb opposite a big road obstruction on the other side of the road. The sidecar driver may have gone only into a tobacconist's for a few moments, but it is surprising how a machine under these circumstances can block the traffic in the road at a busy time; this is shown in fig. 10. One moment of thought simply shows that the sidecar should have been stopped at some spot on the road either at one or the other side of that section which is obstructed.

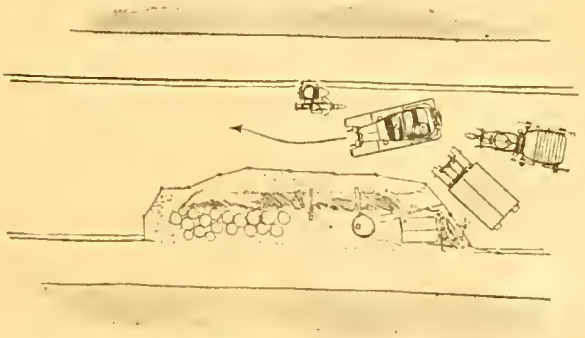

Fig. 10.—It reveals thoughtlessness to leave one's machine on the side of a partially blocked thoroughfare.

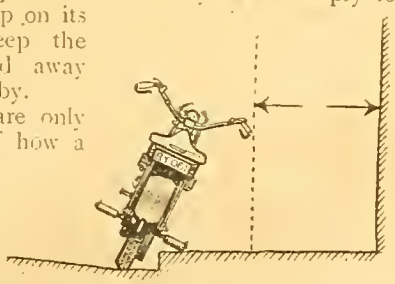
The last, and a very common example of pure carelessness, is the propping of a solo machine against the kerb of a path which happens to be very narrow. As seen in fig. 11, the width of the handle-bars and various projecting parts of the machine has at once the effect of reducing the available space for any pedestrians who walk between the machine and the shop at the sides; and, if it should be a very busy spot in the town, the machine, under these circumstances, will create a very considerable obstruction to pedestrians. A certain class of rider has a habit of doing this outside tea shops and cafés in seaside towns. The way out of the difficulty for the motor cyclist is simply to lift the machine up on its stand and to keep the handle-bars turned away from the passers-by.

The foregoing are only a few examples of how a thoughtless and foolish motor cyclist may either risk his own or the public's safety, and the remedy in each case is obvious.



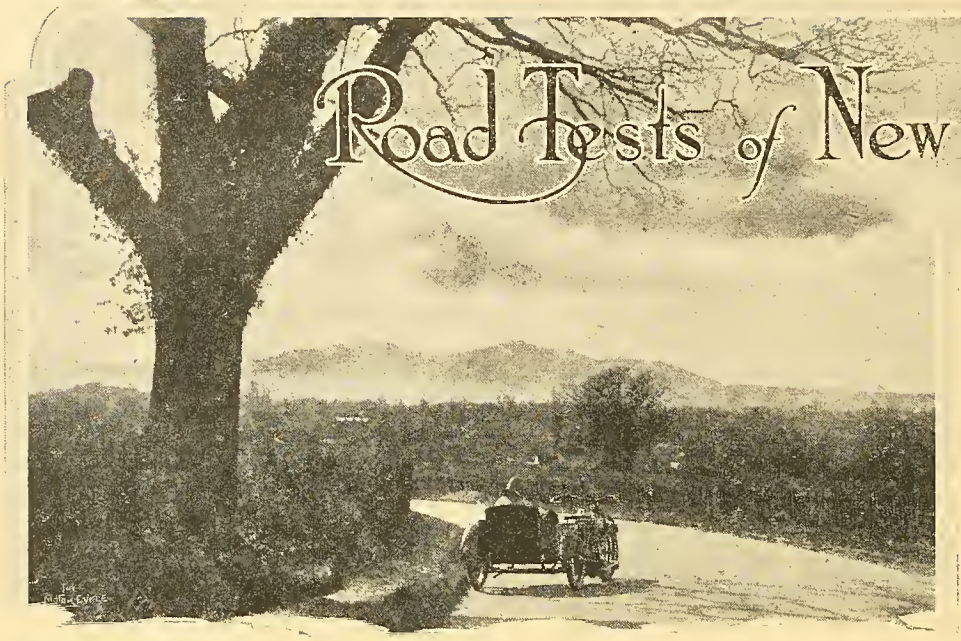


Fig. 11.—The handle-bars of a machine left leaning against the kerb will create considerable obstruction to pedestrians.

Road Tests of New Models

THE 8 h.p. ROYAL ENFIELD TWO-SPEED SIDECAR, WITH THE NEW VICKERS BUILT ENGINE.

TWO feelings uppermost in our mind when taking over the 1921 Royal Enfield sidecar outfit for a test run were curiosity regarding the new Vickers-made engine and a little uncertainty as to the possible difficulty of manipulating a lever-controlled selective two-speed "gear" after a long sequence of machines with handle-bar clutch levers and three ratios.

A remarkable point noticed about the machine when delivered was the wonderfully slow running of the engine, for it would tick over as slowly as will the engine of a lorry, each moment apparently coming to a standstill and then carrying over dead-centre in a way which mystified all who watched it. In the case of a two-speeded sidecar outfit, it is essential that the engine should have ample power, and, at the same time, be capable of pulling very slowly, since the clutch is not capable of the same delicate manipulation as one of the handle-bar controlled variety. In tight corners indeed a very complete range of responsiveness to the throttle is essential, for all "driving" is done on that control, and the method of driving "on the gears" must be largely forgotten.

A Flexible Engine.

Let it be said, then, that the Enfield outfit is equipped with an engine which gives smooth running at all speeds up to 40 m.p.h. (beyond that we did not go), dead slow pulling, a tick-over when idle, and very easy starting. Our test run included several "about town" journeys in the Midlands and one trip to Malvern and back; in all, probably 150 miles running, during which no adjustments or difficulties were encountered.

Owing to the total weight of the outfit being low when compared with the engine capacity, there is a delightful feeling of liveliness about the machine when driving on top gear; ordinary undulating main roads are flattened out to no small degree even on a 4½ to 1 top gear, and, as the engine is almost completely silenced at the exhaust and has only slight tappet noise, it gives a decided impression of effortlessness.

While at Malvern it was decided that the Old Wyche road should be attempted in order to form an idea of the climbing powers of the machine on its 9 to 1 low gear. As most modern three-speed sidecar outfits are geared about 14 or 15 to 1 on bottom, some little doubt was entertained as to the possibility of a successful climb, and, perhaps, in consequence of this pessimistic outlook, a failure was registered less than half way up, before the 1 in 2.9 crest was reached. Running backwards on such a hill is no joke, especially when the sidecar passenger is not used to "happenings" on freak gradients. However, the dummy belt-drum brake on the front wheel proved particularly effective, enabling the machine to be held while the driver dismounted. Turning round, it was decided to give the hill best and try something a little easier, so the new road to the Wyche Cutting was taken and then an attempt was made on the grass track to the summit of the Worcestershire Beacon.

Despite a violent head-wind, this climb was accomplished with the greatest ease, and, although the wind was too high to permit of standing upright on the

SPECIFICATION

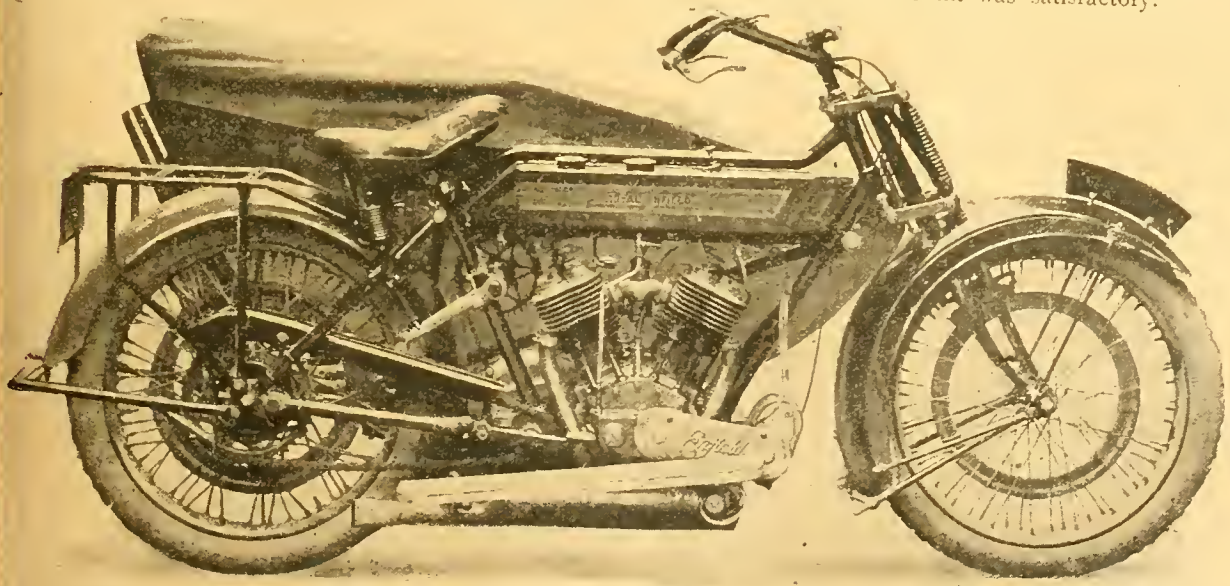
ENGINE: V twin, Vickers-Enfield, 85 × 85 mm. = 965 c.c.
LUBRICATION: Mechanical. *CARBURETTER:* Amac.
TRANSMISSION: ⅝ × ½ chains. *MAGNETO:* Lucas.
GEARS: Enfield two-speed, selective.
TYRES: 700 × 80 mm. *WEIGHT:* 289 lb. (solo).
SIDECAR: Royal Enfield. *PRICE:* £160 (sidecar).

Road Tests of New Models.—

steps of the memorial at the summit, the eighty mile circle of prospect was enjoyed from various sheltered corners.

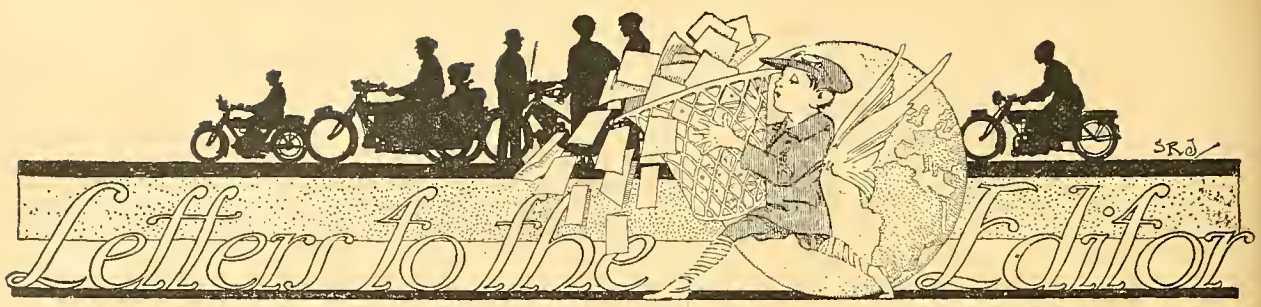
Descending again, it was considered impossible to leave the vicinity without having a second shot at the Old Wyche, especially after the performance on the Beacon, so another attempt was made, and, changing down early, a perfectly successful ascent was made—the difference in the two climbs being, in all probability, entirely a question of driver's *morale*. Being under the eye of the law, and the machine being equipped with the huge trade number plates (we felt like a tester on a surreptitious joy-ride), no delay was made to admire the scene of our triumph, and a quick run down to Worcester and so home to Coventry was made.

The Enfield, after making the ascent of Worcester Beacon. The sidecar is of goodly proportions, but not unduly heavy, and the springing, too, is excellent.



Petrol and Oil Consumption.

Many machines as delivered show shocking petrol consumption, but the Enfield did 50 to 55 m.p.g. throughout; being a new engine, however, the oil consumption was high, for the mechanical pump was set by the makers to give a slightly smoky exhaust and was not altered (for no instructions were provided)! Special praise must be given to the sidecar. Exceedingly well sprung, it has ample room for the average passenger, and the luggage accommodation is excellent. The placing of the tools in a drawer in the sidecar dash is also an excellent idea.



Regarding the machine itself, the same remarks on comfort cannot be applied to the particular one we sampled. Despite 700 × 80 mm. tyres, it was bumpy to ride, and something in the nature of a spring seat pillar would have been welcomed; the spring forks also appeared to work with extreme reluctance, though possibly further running would have eased the initial stiffness of the springs.

Speaking of the controls generally the clean appearance of the handle-bars is worthy of comment, the cables being concealed within the bars and no handle-bar clutch being fitted. The hand starter is easy to operate once the knack is acquired, but a certain amount of strength is needed.

Mudguarding is especially good, and, despite the fact that large tyres are reputed to be mudslingers, the cleanliness of the outfit was satisfactory.

One of the chief characteristics of the new 8 h.p. sidecar is the sweet running of the engine. A high average speed can be maintained without any symptoms of overheating.

The Editor does not hold himself responsible for the opinions of his correspondents.

All letters must be addressed to the Editor, "The Motor Cycle," Hertford Street, Coventry, and must be accompanied by the writer's name and address.

PRICES OF CARBIDE.

Sir,—I agree with "Carbide," who wrote, in a recent issue, that the price of carbide is disgusting, and wanted to know why we have to pay 1s. 2d. per lb. from the trader. I bought 1 cwt. of carbide "lumps," costing me 4¾d. per lb., including carriage. Now I should like to know where the difference comes in from 4¾d. per lb. to 1s. 2d. per lb. bought from the trader? DISGUSTED.

Cirencester.

EXCESSIVE ENTRY FEES?

Sir,—Most clubs at this time of the year are busy organising speed trials, etc. May I make the suggestion that, in the majority of cases, the entrance fees are rather high?

I feel sure that if the fees were kept down to a moderate figure the clubs would obtain much better entries and also would satisfy their own members. I sincerely trust that this will be considered by officials when arranging these matters. FRANK COLLARD.

SPEEDS—TWO UP.

Sir,—Your correspondent, M. Jean C. Watelet, states that on his 1914 Douglas (2¾?) he has travelled journeys of 125 miles, lady on carrier, at an average speed of 28.32 m.p.h.

I am neither a speed merchant nor a loiterer. On one or two runs from Sheffield to Aylesbury (about 125 miles) on a 2¾ h.p. Douglas, later than 1914, fitted with a speedometer (tested), often running 40 m.p.h., I find it takes me five and a quarter hours (excluding stops), which works out 23.80 m.p.h.

I take off my hat to one who could do the same distance, on a similar make, at an average of 28.32 m.p.h. with passenger on the carrier. I did not know it could be done. Most Douglases I know have a maximum speed of 55 m.p.h. under favourable conditions with one up (excluding T.T. models). To average 30 m.p.h. on the road one must often get up a 60-70 m.p.h. spurt [This is not so.—Ed.], and this average is rarely exceeded by high-powered touring cars on a road such as London-Portsmouth or the Great North Road.

Worksop. ECLIPSED.

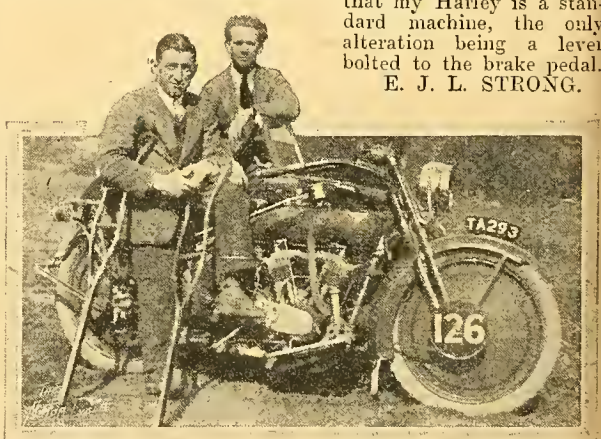
CLASSIFYING COMPETITION RIDERS.

Sir,—Is not all this correspondence making a mountain out of a miserable mole-hill? Admitted that the amateur cannot compete with the trade man in speed events, I still fail to see what the former has to grouse about. In all open speed events, and in most club events, there are special classes for him; and if he wishes to try his hand in the open classes he knows what to expect. And as regards reliability trials, I think that very few regular amateur competitors feel that they are out of it—except when what amounts to a "fast hill-climb" is used to find a winner, and it always seems to me that this is not a legitimate feature. It is, I suppose, a matter of common knowledge among competition riders that, as far as riding ability goes, the *average* trade rider is a long way behind the amateur. It is only necessary to watch competitors on a really bad hairpin bend or "colonial" road to see the truth of this. I have been many times surprised, though I am so no longer, to see what thoroughly bad exhibitions of riding trade men, even those with international reputations, have given when confronted with really difficult surface, while comparatively unknown amateurs sail serenely by with feet on rests. There are, of course, brilliant exceptions; but in reliability trials the good amateur can compete on perfectly equal terms with the trade man, and if he does not get his fair share of awards he has only his own lack of skill to blame. The remedy is obvious. Do not squeal, but go and practise riding in a farmyard till you really can ride.

(Rev.) J. M. PHILPOTT.

POLICE PREJUDICE AND THE SWISS SIX DAYS.

Sir,—No doubt a few of us who know the feeling against motors in Switzerland (except in the French and Italian cantons) would be glad to hear that some guarantee has been obtained by the organising body from the Swiss police authorities.



It should be remembered that a Swiss policeman has the power (and exerts it fully) to stop any motorist and fine him on the spot under the name of bail to appear at Court later on. South of Lac Léman (the lake of Geneva), where French is spoken, and south of the St. Gothard Pass, where Italian is spoken, all is well, but north of these points, where the German language and mentality rule supreme, the motorist is shown very clearly that he is not wanted. Speed limits of 4.5 kilometres (three miles) an hour on level lake-side roads bear witness to this, and these limits are no dead letter either, as one reports to the police on entering the section, and is given a time check to hand to the police at the other end. Kingston is a miracle of tolerance in comparison.

France is good enough for me when, like old John Gilpin, I wish to ride abroad. J. STUART WHITE.

GOLD MEDAL IN SPITE OF DISABLILITY.

Sir,—Perhaps the enclosed photograph of the Harley-Davidson on which I was lucky enough to win a gold medal in the "Land's End" may be of interest to other disabled men who are trying to decide on the choice of a mount. It says much for the ease and simplicity of control that my Harley is a standard machine, the only alteration being a lever bolted to the brake pedal.

E. J. L. STRONG.

A disabled rider who won a gold medal in the London-Land's End Trial on a Harley-Davidson sidecar, and made a good climb of Porlock Hill. This feat demonstrates the ease with which the modern sidecar is manipulated, but at the same time manipulation and driving alone cannot win London-Land's End gold medals. (See letter, Mr. E. J. L. Strong.)

TRACING TROUBLE BY A LITTLE LOGIC.

Sir,—"Ixion" has propounded some puzzling problems in mechanical troubles, but I fancy that the following would baffle even him.

My 4 h.p. single-cylinder sidecar outfit suddenly lost its tune after surmounting a stiff hill on second. There was no misfiring, no symptoms of carburetter trouble—just serious loss of power. Examination of every part disclosed nothing amiss, and I remounted, and went away again as well as ever. A few miles further on I had again to use second gear, and the trouble recurred. Again I tested everything, including compression, but all appeared in perfect order. Off I went once more (after taking the precaution to fit another plug), and all went well till I used second again, when the trouble reappeared. This time I started tabulating facts, which, naturally, led to an association of gears with the loss of power, but the gears seemed free enough, so I again resumed my journey and waited for the next change down. It came, but the trouble did not! Deductions wrong, O Watson! Nor did it recur after the next two changes down, but at the third it did it seriously. With a stiff wind and a hilly road before me, I was compelled to solve the trouble, and then I noticed that the exhaust valve tappet was suspiciously bright, as if it had been hammered by the valve. Yet the clearance was correct!

With the compression tap open I turned the engine round, but could not make the valve touch the tappet when down, nor could I make the tappet stick up. So I sat down and wrote in my notebook the following facts:

(1.) Trouble only after gear change.
(2.) Exhaust tappet being hammered.

Query: What connection between gear change and tappet?

Answer: Hand valve-lifter when change is effected.

But an inspection of the hand lifter revealed nothing wrong, so I determined to test it running. Again I went off in perfect style and waited for the trouble. It occurred right enough after changing down and changing back again to top, so, declutching, I left the engine running and carefully looked at the hand lifter. And, lo! I found the trouble. I was wearing a long-sleeved Cardigan, and a loop of the material was hooked on to the end of the wire where it comes through the handle-bar lever, thus preventing the wire from going back, and so holding the tappet up to the foot of the valve.

I may add that I usually lift the exhaust after throttling down to stop, and this allowed the loop to escape before I noticed it. I turned back my sleeve, and went on without any further trouble. G.A.

Northampton.

"IRREDUCIBLE MINIMUMS" IN CAMPING EQUIPMENT.

Sir,—I read with interest the article by Mr. H. Riley in a recent issue of *The Motor Cycle*. One is invariably struck by the difference of ideals held by several enthusiasts, and this is particularly true in regard to the "irreducible minimum" of equipment. I have no doubt that for your contributor's particular party the arrangement was perfect. My own ideal would be less camping and more riding. As regards equipment, I have found that even the tent can be dispensed with (provided there are no ladies in the party). In the summer I sleep quite comfortably in an oilskin suit, in colder weather in an oilskin covered sleeping bag. The only objection to this method is the discomfort of getting up and preparing breakfast if it happens to be raining; so I usually carry a special lightweight tent for use if the weather is unfavourable, otherwise I am off on the road at dawn with a minimum of trouble.

I have found the best cooking outfit to be an Army "billy" and a small blowlamp to take motor spirit. Strange as it may seem, however, in a long experience all over the country my greatest difficulty has been that of finding water. Good camping ground is easily found, but to find good camping ground with drinking water handy is *not* easy. If possible, therefore, a spare tin which can be filled on the road some time before settling down for the night should be included in the kit.

A little study of the map is of great assistance in finding good camping ground even in strange localities, and this brings me to my real reason for writing. What is the law regarding camping? Of course, I know the recognised method of requesting permission from the landowner and camping on his enclosed ground, but this has the objection of taking up considerable time. My own practice is to branch off into a by-road on which the hedges or fences are at some distance back from the road itself, wheel the bicycle up on the grass, and camp out in the shelter of the hedge. Suitable places of this kind are always easily found without trespassing, and, if the road is carefully selected, one may be there half the day without anyone passing, except occasional farm hands.

Only on one occasion have I been challenged. In a sparsely populated district in Oxfordshire, one day about 6 a.m., I was told to move on by the local constable. Possibly only half awake, I was too much taken by surprise to discuss the matter, and he did not wait. The others of my party say he muttered something about having had to move some gipsies earlier that morning, and could not make any distinctions. I have never been able to get an authoritative statement on this point, and shall be glad if you can give your camping readers a ruling.

I may add, even if illegal, only the suspension of my licence would make me give up camping, which I consider the perfect complement of a motor cycle holiday.

J. JAMESON.

[Generally speaking, camping by the roadside and on waste ground is illegal, and, although the law is not often enforced, it is much preferable to obtain permission from an obliging farmer.—ED.]

MECHANICAL OIL PUMPS IN COLD WEATHER.

Sir,—I hope I am not presuming too much in asking you to publish an account of two photographs which I enclose. My reasons for making this request are:

(1.) Shortly after the last Show you stated that the "Best" mechanical pump could not be classed as a pressure lubricator. This point was certainly dealt with in a short letter published in your issue of December 30th, but evidence of the photographs was not available at that time.

Proving that a mechanical oil pump functions in cold weather—a test of the "Best" mechanical pump referred to in the letter from Messrs. Best and Lloyd.

(2.) There appears to be a feeling amongst current opinion that mechanical pumps are not capable of passing oil in cold weather. An instance of this is found in Mr. David Tod's letter published on January 6th. I feel, therefore, that the two experiments we have just made are of sufficient interest, as bearing on the subject of mechanical lubrication for motor cycles, to warrant their publication.

The first photograph shows a Best and Lloyd mechanical pump delivering a very thick mixture of oil and vaseline. As a matter of fact, it was of the consistency of butter, and was specially prepared to test the efficiency of the pump. Some idea of its viscosity can be obtained from the shape of the heap below the drip. It will be seen that this is roughly of conical shape, measuring about 1½in. across and 1in. in height.

The other photograph confirms the positive qualities of the pump, which shows oil being delivered at a pressure of over 100 lb. to the square inch, so that there appear to be no grounds for thinking that mechanical lubrication is unreliable in cold weather when thick oil is used. R. D. BEST.

BEST AND LLOYD, LTD.

[The second photograph, which exigencies of space compel us to omit, clearly shows oil being forced out of the nozzle at a pressure, registered on an adjoining gauge, of 105 lb. per square inch.—ED.]

GETTING OUT OF LONDON.

Sir,—I quite agree that the condition of Edgware Road is disgraceful. I often go to Town from Radlett, and find the following route fairly good :

Take road from Regent's Park to Finchley Road and Swiss Cottage, then straight on to Golder's Green Tube Station. Turn to left opposite the station and continue to Hendon until on the top of Hendon Hill, where a turning to the right is seen. Take it, and bear round to the left towards the Aerodrome, but turning to right at the bottom of the hill. Thence continue straight on to Mill Hill, through Mill Hill to Arkley and Barnet Gate. Turn to left towards Elstree when at Barnet Gate, and go right into Elstree. Then turn to right for Hertfordshire. This road is Watling Street, the continuation of the Edgware Road.

The above route is the one I always take, and is about twenty-one miles from Regent's Park to Radlett. It is not nearly so bad as the main roads, though more difficult to follow. LT 3815.

Radlett.

WAS IT ENGINE SEIZURE?—THE BEST SOLUTION.

Sir,—After reading the symptoms detailed by the writers of several letters, appearing under the heading, "Was it Engine Seizure?" in a recent issue of *The Motor Cycle*, I have little doubt that the purely temporary apparent seizure, or "locking," as it might be described, of the engine was due, not to the true seizing of frictional, or bearing, surfaces, but simply to sparking plug incandescence.

I have proved this by experiment. Certain apparently perfect plugs would cause it ; others of similar type and manufacture would not. At a certain factory I saw a box of plugs, apparently perfect, all of which would cause this state of affairs on all similar engines.

The explanation seems to be this. With both valves closed, the engine being on the compression stroke, the incandescent plug fires the charge when nearly fully compressed, and the resultant gas pressure prevents the piston rising to the top of the stroke, in consequence skidding the back wheel. At the same time, the explosion is not powerful enough to rotate the engine sufficiently backwards to open the inlet valve, and let the exploded gas escape that way.

Thus a deadlock exists, until the machine comes to rest, or, and this is a further proof of the theory, until compression is artificially released by the lifting of the exhaust valve.

Something similar used to happen in the old days of accumulator ignited machines if the advance and retard of the ignition was out of order, but then the connecting rod generally went. That it stands the very great strain of such an occurrence now says a lot for present day materials.

If your correspondents will try raising the exhaust lift lever the moment the trouble happens, I think they will find my theory justified. For permanent cure, change the plug, preferably to a post-war type. SPARKING PLUG.

Binfield, Berks.

AN ECCENTRIC MAGNETO.

Sir,—I should like to know if any of your readers have ever been harassed with the same trouble that it has been my lot to experience lately. My machine is a 4¼ h.p. B.S.A. (1917, I believe), fitted with a war-type American magneto, and since I have become its proud possessor it has been difficult to start from cold. Some few weeks ago, however, it gave up the ghost completely, and, try as I might, the wheels refused to gyrate without external assistance.

The "juice" seemed to be getting there all right, and was of good modern quality. The timing of valves and of the magneto was correct, and the plug gave, what seemed to me, quite a decent spark when rested against the cylinder head. I tried every conceivable setting of the B.S.A. variable jet, exhausted all the known permutations and combinations of throttle and air levers, set the points of the plugs and of the magneto at all distances from zero to a maximum—and as for air leaks!

I spent thus three hectic, unshaven, and perspiring days, wore threadbare my complete vocabulary with its Army guarantee of durability, and I have since worked out the nett result to be .835 explosion per hour, or 273 revolutions per explosion.

I will swear that towards dusk on the second evening I caught my Hoodoo Devil mascot positively leering at me from the handle-bars. He has joined the angels now.

In despair, I removed the magneto and disembowelled it to discover a break in the insulation of the lead from the high-tension coil to the "breaker" points. I patted myself on the back, and almost decided then and there to write a treatise on "Magnetos I have Met." This idea was further strengthened when, on reassembling the magneto—having had the magnets remagnetised just for luck—I found that I could ignite petrol in the plug practically every time, turning the sprocket by hand.

Almost shrieking with joy, I rushed to the bicycle, stuck the magneto back on the platform, timed it so carefully, and called the entire household and a few specially privileged friends to witness the first kick, which I assured them would be the only one required to cause the old 'bus to burst into song.

Determined to impress, at all costs, I set my stage with the utmost care, and, I fear, no little swank. Throttle 32° 14′ and air lever 15° 17′ from zero position. The magneto advance lever was set so that the fourth broken strand was just showing and the thumbscrew over the jet rotated three-quarters of a revolution plus one click. A few kicks with the exhaust valve up and the right hand held over the air inlet gauze "to ensure a rich mixture," a condescending nod to the conductor of the village jazz band, to let him know that the curtain was about to rise, and, finally, amid cheers, one hefty heave.

Total result, one splendid bang ; but alas! for all my pride, I fear it was the magneto's swan song. It has not spoken since.

To convince myself fully that the magneto was at fault I borrowed a modern English magneto from a trusting friend, and the machine started up first kick. This self-same friend, by the way, I found to be a former sufferer from the same cause, and his case showed exactly the same symptoms. Since then I have met still a third, and we are all completely baffled.

The only solution I have to offer is that the magneto is not generating enough energy to cause the spark to jump the points when under compression, but why it should do so for some time and then suddenly cease is more than I can fathom, except that the insulation on the winding is, somehow or other, at fault.

If any of your readers could give me an explanation I should be greatly obliged. T.C.D.

Co. Tyrone.

SUMMARY OF CORRESPONDENCE.

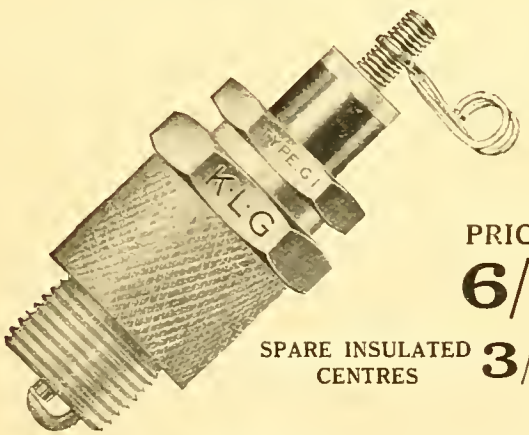
Mr. A. C. Robbins gives it as his opinion that the present system of price guaranteee is altogether wrong, and, in actual practice, only causes prospective customers to withhold their orders.

Attracted by a recent article on "Camping Equipment," a Coventry correspondent, who signs himself "Family of Three," wishes to get in touch with other motor cyclists who would care to join his party for a camping tour in August holiday week.

BOOKS AND MAPS FOR MOTOR CYCLISTS

Issued in conjunction with *The Motor Cycle*.

	Price net.	Book post.
"HINTS AND TIPS FOR MOTOR CYCLISTS." Containing over 400 useful "wrinkles" and helpful hints in regard to motor cycles. Seventh Edition	2/-	2/3
"TRACING MOTOR CYCLE TROUBLES." A system for tracing motor cycle faults and of remedying them when found. Fourth Edition ..	2/-	2/3
"MAGNETOS." By A. P. Young. A complete treatise on magneto ignition for motor cars, motor cycles, and aeroplanes. Second Edition	4/6	4/10
"TWO-STROKE MOTOR CYCLES." A reliable treatise on Two-strokes from the rider's point of view. Just published	3/-	3/3
"MOTOR CYCLE REMINISCENCES." By "Ixion," of *The Motor Cycle*	5/-	5/4
"THE MOTOR CYCLE" ROAD MAPS, England and Wales, Scotland, London (showing roads into and out of London and avoiding London). Mounted on linen. Set of three, complete in case.	5/6	5/10
"THE MOTOR CYCLE" ROUTE BOOK. With 32 pages of Road Maps of England and Wales, Scotland, and the London District ..	5/-	5/4



Obtainable by post (remittance with order) from ILIFFE & SONS Ltd., 23, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.

K·L·G

ON Saturday, April 16th, at the first 1921 Brooklands Meeting of the British Motor Cycle Racing Club, riders using K.L.G. Sparking Plugs won six of the eight events.

THE sustained successes in track and competitive work which are being constantly secured by K.L.G. Plugs are the most convincing proof that could be offered of their stability and unfailing reliability.

Of interest to the motor cyclist, the "G" model is detachable with replaceable centre and rust-proof body.

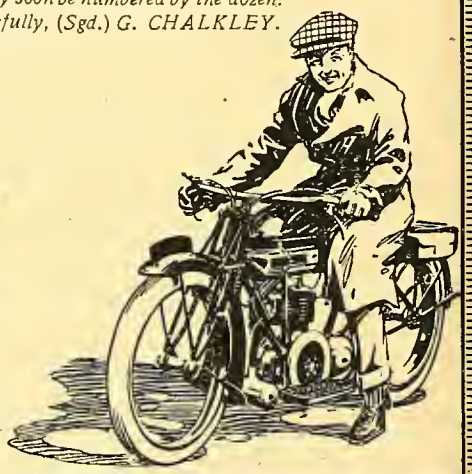
"The machine is perfect" says



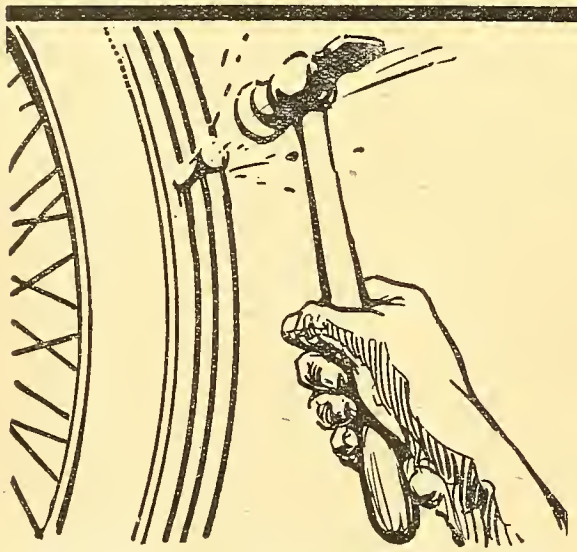
Mr. G. CHALKLEY, of Dartford, Kent.

Here is a letter dated April 5th, 1921 :—

Dear Sir—The Connaught Motor Cycle was delivered to us on April 1st, ***unscratched.***
We have endeavoured to find some fault either in the manufacture or in the running, but have failed to do so.
The machine is perfect.
I know of only one other Connaught in the town of Dartford, may they soon be numbered by the dozen.
Yours faithfully, (Sgd.) G. CHALKLEY.

Can you say the same about the machine you have in mind ? You could not go wrong if you ordered the same machine. It was a single-speed model MIN.—costing £47 10 0.

Send for our free illustrated descriptive booklet—no obligation whatever.



CONNAUGHT

2½ Two-stroke Single-speed Model MIN.

Inside Flywheels.

We have in preparation an authoritative article in defence of the inside flywheel type of engine from the pen of Major F. Strickland, M.I.A.E.

Belgian Tariffs.

The Belgian Government has imposed a tariff of 20% on motor cycles and motor cycles and sidecars, and 15% on motor cycle parts.

To Holyhead and Back.

The Ealing and District M.C.C. twenty-four hours trial to Holyhead and back starts to-morrow night (midnight, Friday, April 29th). The venue is the Berkeley Arms Hotel, Cranford Bridge, and the route includes Bwlch-y-Groes, while the premier award is the Maudes Challenge Shield.

Heavy Transport on Roads.

I am in great hopes (writes "Owen John" in *The Autocar*) that the Road Board will remain the sole survivor of the wreck of the over-ambitious Ministry of Transport, and will inspire a confidence that at present we sadly lack in our masters—or, should it be, servants? There is plenty of work ahead of it, but it cannot be expected to do much if at the same time there is to be allowed on the roads traffic that is nothing but the embodied spirit of destruction. Really very heavy transport demands specially made roads, and should not be allowed elsewhere in its present shape. As it exists it is costing the country more than it is worth.

Motor Cycling in South Africa.

In the hill-climb recently held by the Pretoria M.C., the winner was J. W. McIlwraith (A.B.C.), 2m. 4s.; 2, P. Flook (Norton), 2m. 50s.; 3, C. D. Wolfswinkel (Harley-Davidson sports model), 3m. 5⅗s. In the sidecar class the winner was Lond (Excelsior), 3m. 22s., while a Harley-Davidson gained second and third places.

A handicap reliability trial was recently held by the Maritzburg M.C.C. to Camperdown and back. The handicapping was carried out by making certain time allowances for various classes. The distance of the trial was about twenty-six miles. The winner was A. Morcom (Norton, 633 c.c.); 2, T. Kenyon (Triumph, 550 c.c.); 3, C. E. Mountfort (Indian, 250 c.c.).

An Open Hill-climb in Staffordshire.

Oakamoor Hill in North Staffordshire will be the venue, on May 28th, of an open climb of the East Midland Centre A.C.U. All the usual capacity classes, "open" and "expert barred," are included; and, in addition to gold medals for fastest times, a silver cup will be awarded for the fastest ascent of the day. Entry forms may now be obtained from Mr. S. Foden, the hon. secretary of the organising body, the Derby and District M.C., at 56, Sacheverel Street, Derby.

Special Features.

LIGHTWEIGHTS FOR HARD SERVICE
TT. NOTES AND NEWS
DRIVING IN TRAFFIC.

Absentees.

Two O.K.'s were to have been ridden in the Midland Centre A.C.U. open reliability trial by Hall and Handley. They were unable to compete, owing to the fact that both these riders had joined the National Defence Force.

A ROYAL MOTOR CYCLIST.

H.R.H. Prince Henry and the 3½ h.p. Sports Model Douglas recently supplied to his order. The Prince is thoroughly conversant with the mechanism of his mount, and is an expert rider withal. This overhead valved Douglas is the third machine of that make he has owned.

Clubs in Competition.

Seventeen club teams have entered for the Surbiton and District M.C.C. inter-team trial for Maudes challenge shield. The start takes place at one o'clock on Saturday at the Talbot Hotel, Ripley, near Guildford, and all competitors are requested to report to the chief marshal by 11.30 a.m.

British Speed Successes in Italy.

Three recent important Italian road races have resulted in distinct successes for British machines. These events were of considerable severity, and were all keenly contested.

CIRCUIT DE CREMA (1,000 c.c. CLASS).—1, Biagio Nazzaro (7-9 Harley-Davidson); 2, Erminio Visioli (8 New Imperial); 3, Gaetano Tanzi (8 M.B.); 4, Vanomi (8 New Imperial).

CIRCUIT DE CICAGNA (1,000 c.c. CLASS).—1, Nino Vanomi (8 New Imperial); 2, Giuseppe Foligno (7-9 American X); 3, Dino Cassioni (7-9 Indian).

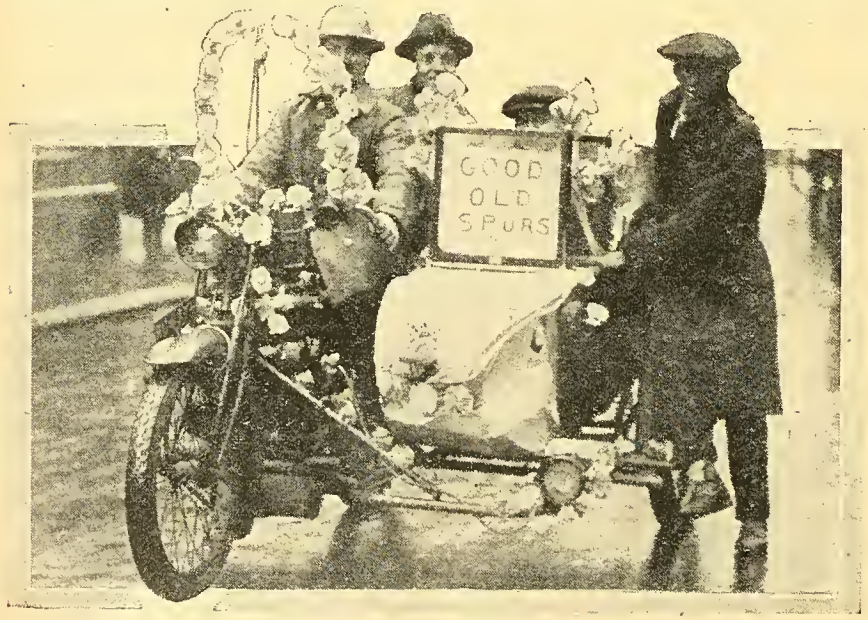
TIBER CIRCUIT (350 c.c. CLASS).—1, Giovanni Cocchi (2¾ Douglas); 2, Davide Gambini (2¾ Douglas); 3, Carbonini (Motosacoche).

500 C.C. CLASS.—1, Luigi Morabito (3½ Rudge Multi); 2, Ernesto Vailati (3½ Sunbeam); 3, Olio Ottorino Dall (3½ Frera); 4, Erminio Visiolo (3½ Norton).

The Motor Cycle Grand Prix.

Among the entries for the Motor Cycle Grand Prix, the Union Motocycliste de France has received the following from British firms: Two B.S.A.'s and three Nortons, to be ridden by Victor Horsman, Hubert Hassall, and Graham Walker.

Another Important Whitsun Event.



Midland motor cyclists, who are not competing in the London-Edinburgh run, have another attractive trial—or, rather, two important events—open to them at the Whitsuntide holidays. The Birmingham M.C.C. is holding a competition for the Lycett Trophy, starting from Birmingham on Saturday, May 14th, *via* Bristol to Bridgwater, and thence *via* the "Porlock-Lynton" route to Land's End. The return journey on the following Tuesday will constitute an entirely separate trial for the Sangster Cup.

A SCENE IN THE MIDLAND CENTRE TRIAL.
C. W. Lewis (3½ Beardmore) and L. L. Sealey (4¼ B.S.A.) on Giddynap. Incidentally, the spectators here were much disappointed at the lack of thrills!

Condoleuces to Well-known Rider.

Our sincere sympathies are extended to G. E. Stanley, who, on arrival home from Brooklands last Saturday, learned the sad news of the sudden death of his wife.

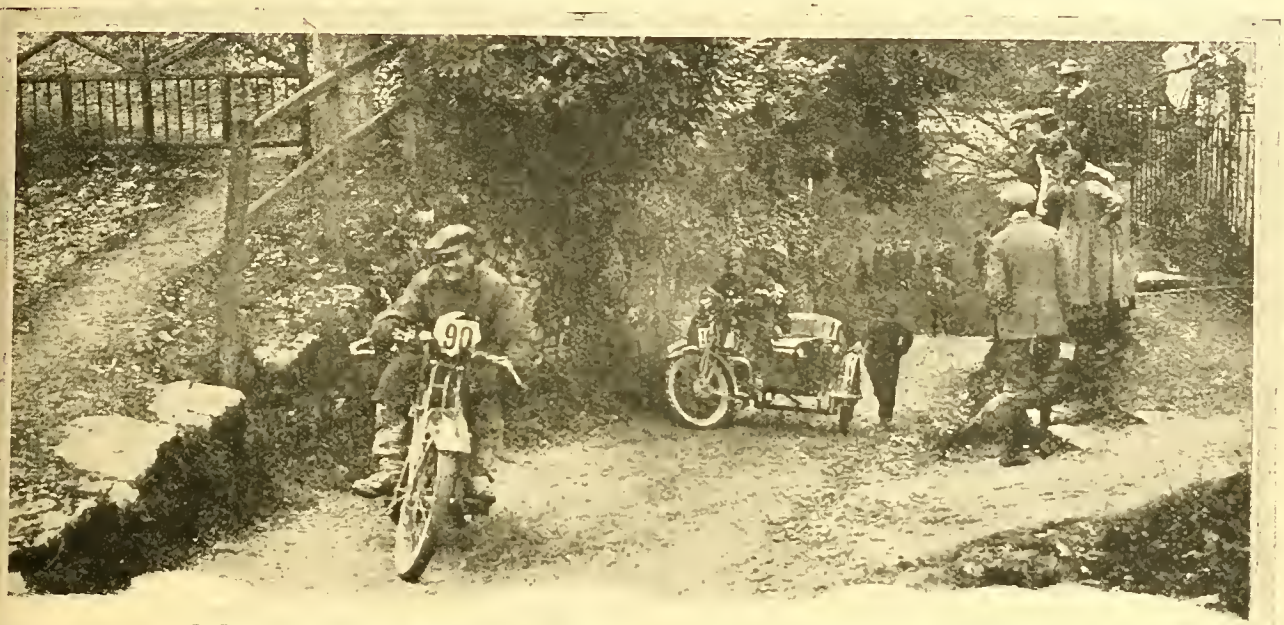
TO THE FOOTBALL FINAL BY SIDECAR.
This photograph was not taken at a battle of flowers, but at Stamford Bridge last Saturday. It shows a heavily laden Matchless outfit which was elaborately decorated with Tottenham Hotspur colours (blue and white). The number of people who travelled to the match by sidecar from the provinces was remarkable.

Visibility of Road Signs.

Some years ago direction-posts painted with alternate black and white 9in. bands were demonstrated to possess the maximum visibility at night. Although the results of the experiments were laid before the Ministry of Transport by the Roads Improvement Association, the official opinion was returned that white posts were equally satisfactory. Many of our touring readers will have noticed that several local authorities have adopted the black and white scheme, and that the effect is most successful.

The Number of Motor Cyclists.

The American Automobile Association estimates that the number of motor cycles in America is approximately 271,000. Yet American visitors to this country have expressed their surprise at the popularity of the motor cycle in Great Britain. The large area of the U.S.A. may have an effect of spreading out the 271,000, and so lessening their apparent number. All the same, we should like to know how many machines are *in use* in the U.S.A. It is said that 69,349 motor cycles are located in the State of New York, while Pennsylvania claims 23,981.



Motor Cycling in Belgium.

In the recent Coupe de la Meuse reliability trial, which included tests of flexibility, speed, reliability, etc., Breslau (on a Norton) was first, having 139.38 marks; Thys (on a Triumph) second, with 139.52 marks; and Antoine (Triumph) third, with 123.99 marks. The best performance by a Belgian machine was by a Saroléa, which finished sixth, with 115.21 marks. Thus British machines scored distinct successes.

In the sidecar class, Spinguel (on a Harley-Davidson) was first, with 152.68 marks; Pirard (Saroléa) second, with 109.45 marks; and Verlaine (Abingdon) third, with 98.85 marks.

A TEST FOR TYRE TREADS.

Nine Very Stiff Climbs in One Section of Twenty Miles in the First Midland Centre A.C.U. Open Trial.

G. E. Stobart (6 James) making light of Knapp Hill. A. G. Beasley (3½ Sunbeam sc.) is in difficulties.

A TEST for tyre treads. This, in a few words, describes last Saturday's Open Trial in the Cotswolds organised by the Midland Centre A.C.U. The course was of such a character that everything depended upon the weather to render it moderately easy for modern motor cycles or the reverse.

Thirteen observed and difficult hills, several unobserved but quite hefty climbs, and a course that had been well "lubricated" by early morning showers was the stiff task set the 130 competitors. A good entry; for there could be no implications of "pot-hunting"—there was no "pot" to "hunt"—and we rather agree with the disgruntled Irish competitor who remarked that, "never was a gold more hardly won—and, then, it isn't a real gold, anyhow!" (Gold centre medals were the premier 100% awards; and there will be few claimants).

A Start in the Rain.

Rain, heavy rain, greeted the earlier men at the start at Redditch, but, fortunately, it had cleared somewhat before Saintbury was reached by the lightweights—all the leading forty odd were mounted on "babies." From Redditch to the stop and re-start test on the summit of slippery Saintbury was down as a non-stop section; but the going was comparatively good, and few worried, although two fell out within the first half-mile.

Mr. Douglas Arter, the marshal in charge, however, decided that a test on the bend would be unfair, and wisely elected to transfer the section to the top portion of the hill.

In spite of the greasy state of Saintbury some very excellent ascents were made. Conspicuous among these the following deserve special mention: G. M. Townsend (3½ P. and M.), J. L. Stocks (6-7 Ariel sc.), F. W. Giles (7 A.J.S. sc.), G. S. Arter (5-6 James sc.), T. G. Amphlett (4½ James sc.), H. F. S. Morgan (8 Morgan), and T. Doyle (3½ Lea-Francis). The last-mentioned impressed the observers by the easy speed at which he ascended.

Fast Times on Low Gears.

Several had to use their feet for steadying, including W. Bell (2¼ New Hudson), G. W. Shepherd (2⅜ Beaumont), and W. E. Smith (3½ Norton), while S. R. Philpot (2⅜ Douglas) did not keep up his "revs." and was forced to dismount and run beside his mount. G. A. Strange (3½ James), usually so successful, had fitted over-size tyres, and rolled one of them off its rim. Having lost marks by stopping in a non-stop section, and also on time, he elected to retire.

Frank Whitworth, mounted on a 3 h.p. Ivy, was none too happy in the grease, and went by with a cheery "All right, this is." to the observers. Higher up the hill the competitors were being timed in low gear over approximately 140 yards. The riders were brought to a stop between two marks, and sent away singly. The surface at this point was exceedingly greasy, and the highest speeds were made by those with (1) the most suitable tyres, and (2) the pluck necessary to ignore the possibilities of a skid.

F. C. Parkes (2½ Sun-V.T.S.) stopped his engine on restarting, but the regularity with which the majority got away was almost monotonous. G. E. Cuffe (2½ Metro-Tyler) decided to push off instead of keeping his engine running.

From the slow speed of some of the competitors, one rather suspected that they had mistaken the nature of the test, and were out to demonstrate how slowly they could cover the section. Others were just as fast. J. L. Stocks (6-7 Ariel sc.) accelerated in a wonderful manner, and covered the distance in 21⅕s. T. Stevens (5-6 James sc.) was only ⅖s. slower. L. Tonks (on a 2¾ New Imperial) beat this time by over a second. Incidentally, the New Imperials impressed spectators at various parts of the course by their speed. Another machine singled out on several of the hills was V. Hawkins's 2½ h.p. Excelsior two-stroke. In the low gear acceleration test, it was timed at 19⅕s., which was also the time occupied by G. J. Baragwanath (3½ Sunbeam), while H. Greaves (Beardmore-Precision) was only ⅕s. slower. S. Hall (3½ Sunbeam) occupied 19⅖s.

These times were beaten only by A. E. Taylor (6 B.S.A. solo), 18⅗s.; W. B. Gibb (3½ Douglas), 17s.; and G. S. Arter (5-6 James sc.), who made the fastest sidecar performance.

A Missing Check.

The route now led down Fish Hill into Broadway, over Snowshill, and *via* some very greasy roads indeed, through Kineton, with an unofficial refreshment stop at Air Balloon—"open all day"—up Birdlip (in good condition, and not worth observing), and on to a "time check two and a half miles from Stroud," *according* to the route card. Actually, this check was "missing," and many were the complaints in consequence.

Anyhow, at the point where (we presume) the check ought to have been, the riders were directed down the worst road of the day: a narrow steep horse—but not cart—track. Not a few came croppers in frantic wheel-locking attempts

Two riders on the steepest grade in the event, Giddynap. It was dry; and the Triumph rider nearest the camera is only changing down to low.

to check their momentum; but, although from now to the lunch stop at Stroud was strictly non-stop, there were no official observers visible! There were none of these gentlemen either on Stancombe Hill, a little further on, and the first of the "new" tests. Stancombe, or more properly Steanbridge Lane, was slightly wet and steep at the bottom corner, but dry, and even steeper at the hairpin higher up. From our personal observations, the following were amongst the best of the earlier men: G. Denley (2¼ Velocette), Rex Mundy (2¼ Cedos), L. E. Clulee (2½ Allon), P. J. Wilkins (2¾ New Imperial), W. H. Garlick (2½ Hobart), L. Tonks (2¾ New Imperial)—one of the new Imperial T.T. mounts—and G. W. Shepherd (2¾ Beaumont).

Mediumweights do Well.

Then E. J. Weal, on a 4 Triumph, simply sailed up, and indicated that the heavier machines were not going to provide much "fun" here after all. This surmise was correct, and the later solo men on more Triumphs, and Raleighs, Sunbeams, Ariels, and B.S.A.'s (including one big twin each of the latter two makes) made light of the grassy 1 in 5 hairpin. The Beardmores and the only solo Norton in the event, driven by W. E. Smith, were also quite fast.

Perhaps three sidecars failed altogether, and the consequent baulking formed the only other incident here.

Parsons Chains on the Three-wheelers.

Bismore, the next observed precipice, and only two and a half rough miles further on, was wetter all the way up, but scarcely wet enough to make wheel slip *unavoidable* for the really careful sidecar driver. Many were not careful, however, and there were some exciting moments.

Most of the solo men who came up Stancombe successfully also shone on Bismore (the B.S.A.'s in particular), and on the portion which we observed the three-wheelers of H. F. S. Morgan (8 Morgan) and J. W. Meredith (10 T.B.), who both had Parsons chains on their driving wheels, and J. L. Stocks's Ariel sidecar make star climbs. It was largely a matter of luck. On the other hand, for the solo men, Bismore was the *fairest* test of all.

It was well that the schedule speed for this section was only 12 m.p.h., for after but another three very vile miles came Bussage, the most "interesting" and, in the opinion of many, the severest climb of the thirteen observed hills.

Slithering along through deep and "clayey" mud the riders were suddenly confronted with a sharp right-angle bend with an initial gradient of nearly one in four, and, the road being sheltered by a wall, a surface of more mud, blacker, perhaps, but no less slippery. Fifty yards up the gradient eased, and the surface was drier, but further on there was much more one in four, fortunately drier. That was Bussage on Saturday; and even had it been level after the first fifty yards few would have made clean ascents. The "first-aid" man at the foot cannot have inspired much confidence!

Solo Men do Well.

J. E. J. Whitaker (4¼ B.S.A.) and G. J. Baragwanath (3½ Sunbeam) were remarkably steady; H. Greaves (3½ Beardmore) and C. N. Green (4 Triumph) both got up well, but had to use their feet to keep an upright course. All three Raleighs made imposing ascents—Fenn shouting that he was enjoying himself; and we believe he meant it!—A. Rollason (3½ Ariel) and R. W. Duke (4 Triumph) were sure and fast, but A. G. Cocks, on a Beardmore, was perilously wobbly.

F. A. Watson, who had fitted a sidecar to his 3½ h.p. Sunbeam, took the turn too fast and charged the wall; he made quite a good climb, however, on re-starting, but not before baulking another late arrival, C. W. Lewis (3½ Beardmore). Gibb (3½ Douglas) showed that confidence is a great asset.

One Way of Getting Up.

The sidecars coming along now failed (owing, generally, to wheel slip) with such regularity that it became necessary to queue them up at the foot, and send them up singly. Some of the failures were not without their humorous moments. T. Stevens (on a James), for example, tried to haul himself up by the railings! Several lady passengers plaintively expressed a wish to get out and walk, but one or two were braver, and energetically threw themselves on to the carrier—usually, alas, to no avail.

Where so many failed, those passenger vehicles to make clean ascents deserve special credit. By far the best were: H. Green (4 Triumph sc.), W. R. Brown (3½ Sunbeam sc.), F. W. Giles (7 A.J.S. sc.), H. F. S. Morgan (8 Morgan), J. W. Meredith (10 T.B.), and W. A. Ridley (10 New Hudson), the New Hudson being undoubtedly fastest of these.

Knapp, the fifth and last climb before lunch at Stroud, was much easier, and nobody who climbed Bismore and Bussage had any excuse for failing here. But everybody did not climb Bismore and Bussage!

In the afternoon the officials on Rodborough Lane had a very monotonous time; but Bownhill, a little further on, was a more difficult proposition. Reached by narrow, dangerous tracks it was a sheer climb without grease or corner, but after B. Bourke (2½ New Hudson) and Cox (2¾ Armis) early recorded stops, the riders came up almost without incident. F. J. Price (2¾ Diamond) made a wonder-

A Test for Tyre Treads.—

fully fast climb for so small a machine. The spring frame Raleigh riders again appeared very happy on the rough going near the summit. Most of the sidecar men were cautious.

On Giddynap.

Wandering over a golf course and then down Nailsworth W, the riders passed through Nailsworth village, and suddenly leaving the main road, up easily the longest and almost the steepest climb of the day, Giddynap. It was bone dry, however, and the surface was not at all bad. The huge crowds of spectators were consequently somewhat disappointed. Fenn (5-6 Raleigh) apparently came up in second, as did C. N. Green (4 Triumph), who, however, changed down just as he breasted the very steepest portion. A. E. Taylor, on a 6 h.p. B.S.A., was very fast but made an extremely noisy gear change here. J. W. Hazlewood (8 Hazlewood sc.) and H. Riley (6 A.J.S. sc.) both came to a standstill, but carried on under power. Almost without exception the mediumweight solo mounts and heavy sidecars made light of the gradient, and the climbing of most of the two-strokes was very favourably commented upon.

In rapid succession now came three more non-stop hills, St. Chloes, Dark Lane—not quite so bad as its name would indicate—and Whiteshill, and, although these were not so severe as those that had gone before, all were relieved to strike the main road again, at Painswick, for Cheltenham and Rising Sun.

After the grease on the Stroud hills, the competitors were reconciled to anything likely to be encountered on Rising Sun. The top portion of this hill, where the gradient is most severe, proved to be dry and caused comparatively little trouble. At the foot, however, quite a different state of affairs was found. Thick mud and the riders' pluck gave the crowd of spectators an interesting couple of hours watching the gymnastics produced when willing engines fought hard battles with jibing wheels.

Sidecars more Sure.

Very few riders indeed succeeded in negotiating this greasy 100 yards without touching the ground with their feet, and here impressions garnered from the preceding hills regarding tyre treads were confirmed.

At the lunch control, being curious to ascertain why certain machines traversed greasy gradients with such ease, we examined their rear tyres and made notes accordingly, and during the afternoon section we observed that most of the machines which defied the grease were shod with tyres having a tread of steel and rubber. Among these the Palmer non-skid combination type was clearly very popular.

It is rather unusual for sidecars to be consistently better than solo mounts on a greasy hill such as Rising Sun, but on Saturday the passenger vehicles suffered the least inconvenience.

Among the few solo riders to emerge from the Rising Sun grease test were the following: A. W. Thrush (2¼ Levis), W. A. R. Bown (2½ Bown-Villiers), D. A. Atkin (2¾ Hobart), H. V. Collins (2¾ Marloe-Blackburne), G. M. Townsend (3½ P. and M.), T. W. Woodcock (3½ Ariel), T. F. Blumfield (6 Ariel), A. G. Fenn (5-6 Raleigh), and F. W. Viles (5-6 Raleigh). The big Raleighs proved to be very steady and attracted a lot of interest. M. F. Powney (4 Triumph) made what was probably the neatest climb and drew from the spectators a hearty round of applause.

The majority of sidecars did well, but perhaps the star performance was made by F. W. Giles (7 A.J.S. sc.); seated well back, he charged the hill at a terrific speed, and without a falter got through where others had floundered about like novices on roller skates.

T. F. Watson (4 Norton sc.), H. F. S. Morgan (8 Morgan), W. A. Carr (8 Morgan), P. Yates (8-10 New Hudson), N. Rycroft (4 Triumph sc.), and W. R. Brown (3½ Sunbeam sc.) also made fast ascents.

Soloists in Difficulties.

These good performances were interludes in the pantomime provided by most of the others. The powerful little engine of Rex Mundy's 2¼ h.p. Cedos insisted that the driving wheel should precede the steerer. G. Denley's little Velocette turned right round. W. R. Urwin's 2¼ h.p. Levis dived into the ditch, and, apparently pleased by its performance, did it again. C. Hollyoak's 2½ h.p. Federal tried to climb a tree, and came to rest perfectly perpendicular, for all the world like a terrier after a cat.

R. Duke (4 Triumph) was another who found the ditch too narrow to negotiate, and H. Greaves (Beardmore-Precision), H. C. Jennings (3½ James), C. W. Ramstedt (2½ Cotton), and others who fell were in good company, since W. B. Gibb found his willing steed too restive.

We left Rising Sun convinced that present-day engines are sufficiently powerful to climb any gradient, and that grease is a test demonstrating the tractive qualities of tyres.

Sudeley and Willersey were in none too good fettle, but the survivors were so used to rough going by now that these once dreaded acclivities counted for little.

Redditch saw 75% of the soloists and less than 50% of the passenger drivers finish; but, as we know of several "finishers" who retired early and missed half the course, we refrain from publishing any lists until the official awards are notified.

BY THE WAY.

Many riders bemoaned their fate on the very first of the sixteen test hills. Saintbury is not really difficult when dry, but, like other Cotswold climbs, is very slippery after rain. Over a score lost their clean sheets here.

Pirouettes and figure eights were the order on Saintbury after the downpour.

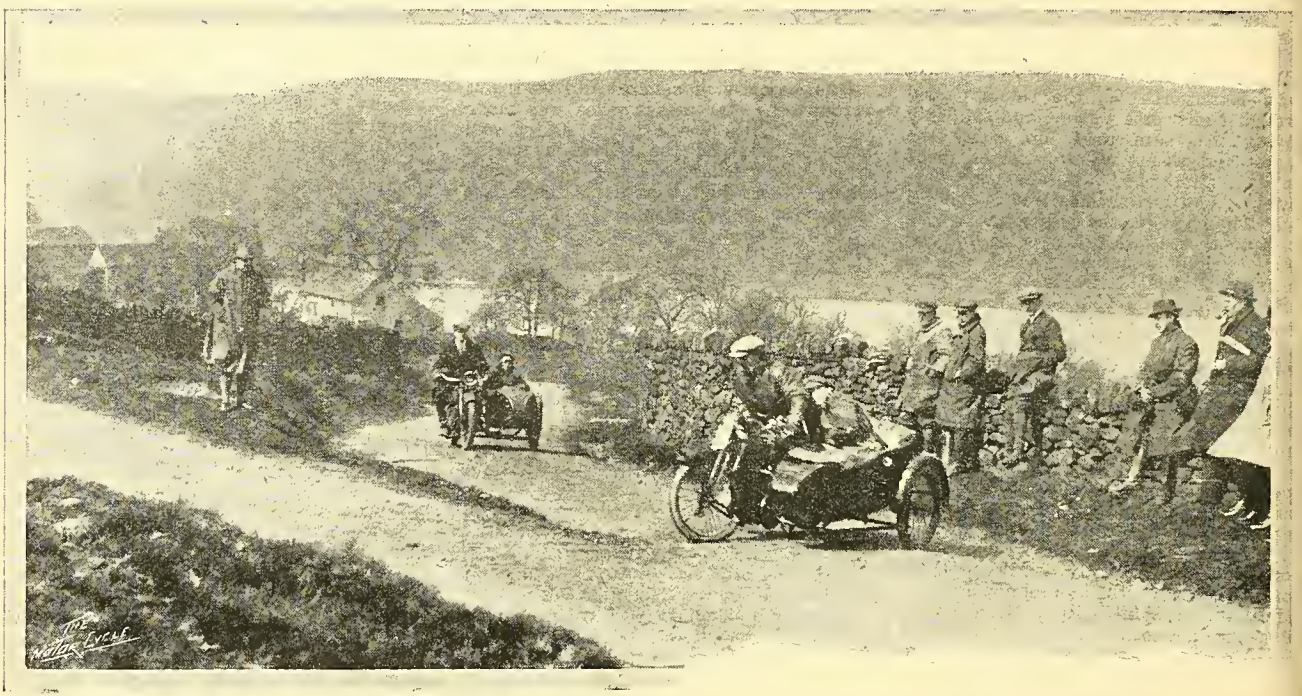
F. G. Edmond (Triumph) was replaced by Norman Ryecroft, the first-named being at Brooklands with his T.T. mount. Ryecroft made an excellent climb up Saintbury.

Copiously drilled outside flywheels were noticed in several instances on two-stroke machines.

George Cuffe hit a wall near Stroud and damaged his frame and handle-bars, but pluckily continued to the end.

Several examples of ultra-sporting sidecars with exceedingly narrow tracks were noticed. On bends these narrow machines apparently are none too safe; one competitor turned over twice.

There were two rather curious registration numbers on competing machines, viz., OH 5555 and OB 6666. If the owner of the last machine took tea at Collett's, in Broadway, last week, and inadvertently forgot to return a bunch of keys to the owner, would he please oblige by doing so.



Sam Hall (Sunbeam) suffered bad luck. But for his legging getting into the back wheel and pulling him up on Bismore Hill, he accounted for all hills.

Raleighs make a promising début. F. W. Viles finds Bussage Hill fairly easy work.

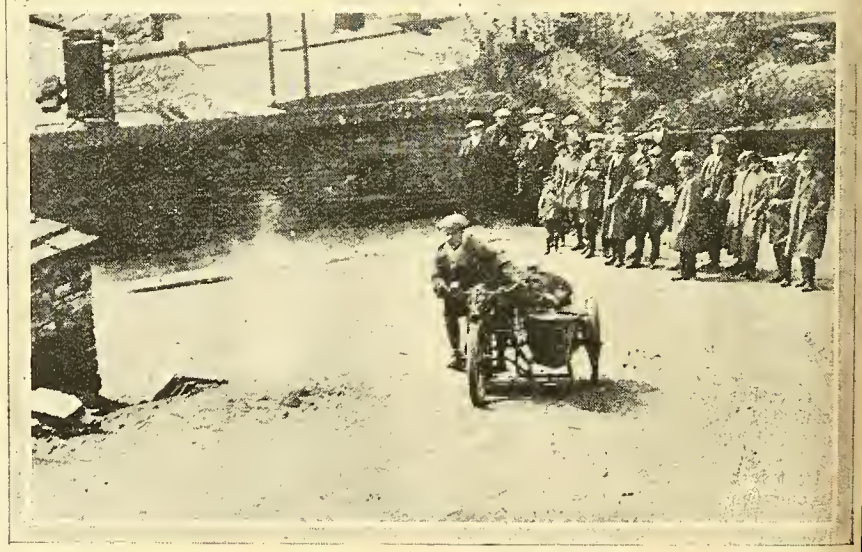
A TRADERS' TEAM TRIAL.

The Sheffield and Hallamshire M.C. Trial for the Traders' Cup.

A test of skilful driving. L. B. Henderson (4 Sheffield-Henderson sc.) on the acute hairpin above Midhopestones Reservoir.

OWING to the present state of affairs in the industrial world, the second annual competition for the Sheffield Motor Cycle Traders' Trophy was not so well supported as last year, and the event, which was held last week end, attracted but four teams of six riders.

Those who did take part, however, were well rewarded, for the weather was ideal, and the road conditions, although sporting, were infinitely better than they were last year on the same course. Although only a few miles out of Sheffield, the route lies amongst some very fine scenery, and under an almost cloudless sky the views were magnificent.



Three Non-stop Circuits.

As previously, three circuits of a decidedly arduous, although not freakish, course of twenty-seven miles had to be covered "non-stop" by each team. The teams consisted of six riders, three mounted on solo machines and three on passenger machines. A feature of the trial was the remarkably good timekeeping observed by all. Amongst those who completed the three circuits, the time variations did not exceed one minute at the most.

Thanks to the dry surfaces, the earlier part of the route was easy, and the first real difficulty was Windhill Lane: a rough and steep rise of about 1 in 6 gradient. Specially good climbs of this were made by S. C. Ashby ($3\frac{3}{4}$ Scott) and F. C. Wates (4 Triumph), both of whom seemed capable of rushing the hill on top gear, holding to a narrow path amongst the "rough."

The severe climb out of Stocksbridge over Hunshelf Bank did not appear to worry anyone, but an acute hairpin near Midhopestones Reservoir was quite troublesome, and some of the competitors found it difficult, for R. May (4 Norton sc.) overshot the corner, and D. H. Kay (4 Triumph) suffered a front wheel skid. F. D. Roper showed considerable skill in bringing round his 7-9 h.p. Indian outfit, while L. B. Henderson, despite his handicap of only having one leg, showed decidedly neat cornering. Incidentally, the Sheffield Hendersons, of which he is the manufacturer, made their first show in a competition on this occasion.

None of the hills actually caused failures, but punctures accounted for one or two retirements, including C. E. Turner ($4\frac{1}{4}$ B.S.A.) and L. E. Wilkinson (8 Morgan), but the percentage of non-stop runs was very high. R. Page

Hunshelf Bank, a severe gradient with cross gulleys. F. B. Roper (7-9 Indian sc.) rounding the hairpin out of Stocksbridge.

Traders' Team Trial—

6 A.J.S. sc.) finished with a flat side-ar tyre, while L. Padley (3½ Norton) nfortunately had tyre trouble ten miles rom the end of the final circuit. This top in Mr. D. Bradbury's team left Mr. . B. Roper's men as the only team to nish complete.

The provisional results are as follows:

MR. F. B. ROPER'S TEAM.

	Mileage.
C. Ashby (3¾ Scott)	81
. B. Roper (7-9 Indian sc.)	81
. Sneath (3½ Wilkin)	81
. Page (6 A.J.S. sc.)	81
. E. Budd (3¾ Scott)	81
. Fletcher (6 A.J.S. sc.)	81
	486

MR. D. BRADBURY'S TEAM.

. Padley (3½ Norton)	71
. R. Kay (4 Norton sc.)	81
. Hudson (3½ Norton)	81
. Fawcett (4 Norton sc.)	81
. Ashelby (3½ Norton)	81
. May (4 Norton sc.)	81
	476

MR. R. STACEY'S TEAM.

C. Wates (4 Trimph)	81
Raynes (7-9 Harley-Davidson sc.) ...	81
Wheatley (4 Triumph)	81
Stacey (7-9 Harley-Davidson sc.) ...	81
H. Kay (4 Trimph)	40
Searle (4 Triumph sc.)	81
	445

MESSRS. JAMES AND CO.'S TEAM.

E. Turner (4¼ B.S.A.)	54½
W. James (8 Morgan)	81
. James, junr. (4 Sheffield-Henderson)	42
E. Wilkinson (8 Morgan)	13
Fletcher (4 Sheffield-Henderson) ...	81
B. Henderson (4 Sheffield-Henderson sc.)	81
	351½

A TRIAL FOR CYCLE CARS AND LIGHT CARS.

Last Saturday the Junior Car Club held its annual London-Manchester run, and a number of cycle cars competed. Here is C. R. M. Mills (8 Morgan) climbing Kelstedge in Derbyshire.

CLUB NEWS.

Week-end Club Events.

April 30.—Bridgwater and District M.C. and L.C.C. Hill-climb.
April 30.—Exeter M.C. and J.C.C. Reliability Trial.
April 30.—Wolverhampton Auto Nomads. Paper-chase.
April 30.—Holwood M.C.C. Club Run to Tunbridge Wells.
April 30.—Bristol M.C.C. Club Run.
April 30.—Wallington and District M.C.C. Hill-climb.
April 30.—Dewsbury and District M.C.C. Picnic.
April 30.—Midland Centre A.C.C. Inter-club Team Trial.
April 30.—West Kent M.C. Members' Team Trial.
April 30.—Glasgow Western M.C.C. Open Hill-climb.
April 30.—Ipswich and District M.C.C. Hill-climb.
April 30.—Warrington M.C. Hill-climb.
April 30.—North West London M.C.C. Inter-club Team Trials.
May 1.—Burton and District M.C.C. Club Run to Cannock Chase.
May 1.—Halifax and District M.C.C. Club Run to Ilkley.
May 1.—Oxford M.C. Social Run.
May 1.—Leeds M.C. Club Run to Pateley Bridge.
May 1. Barrow and District M.C. Hill-climb.
May 1.—Essex County and Southend A.C. Opening Run.
May 1.—Bradford M.C. and L.C.C. Freak Hill-climb on Rosedale Abbey Bank.
May 1.—Portsmouth and District M.C. and L.C.C. Club Run.
May 1.—Kidderminster M.C.C. Social Run.
May 1.—Woolwich, Plumstead, and District M.C. Picnic.
May 1.—Eastbourne and District M.C.C. Club Run.
May 1.—Worcester and District M.C.C. Club Run to Clent.
May 1.—York and District M.C. Wolds Reliability Trial.
May 5.—North Wales M.C.C. Picnic.

A Section devoted to Club Announcements will be found on Supp. lii.

Bury and District M.C.C.

On Thursday the club held a general eeting and dinner, at which the epherd Walsh challenge shield was esented for competition by Mr. N. epherd Walsh, the president.

Rugby and District M.C.C.

The first event of the year, a reliabilty d speed-judging trial over a sporting ghty miles course, was held on the 24th st., and included Priors Marston and ewnham as observed hills. Results were follows: 1, S. Hooker (4 Humber sc.; B. G. Frost (4 Triumph sc.), 3, C. Guest Triumph).

North-west London M.C.C.

Owing to a deterioration in the con-tion of the road, the speed trials to ve been held on Saturday were can-lled. It is hoped to obtain a private ad for this event later in the year.

Eastern Valley M.C.C.

In the recent climb on Cross Hands Hill lady competitor, Mrs. G. Morris, on a h.p. fixed gear Rudge, made second stest time of the day being beaten only E. Howells on a 4 h.p. Norton. Full sults follow:

50 c.c.—1, F. Furlong (2¾ Douglas), 27⅗.; 2, o. Oliver (2¾ Douglas) and S. Howells (2¾ nglas), 30s., tied.

00 c.c.—1, E. Howells (4 Norton), 20⅘.; 2, Mrs. rris (3½ Rudge), 21s.

NLIMITED C.C.—1, E. Howells (4 Norton), .; 2, Mrs. Morris (3½ Rudge), 20⅘.

NLIMITED SIDECARS.—1, W. Weaver (8 field), 27⅘.; 2, J. Williams (8 New Imperial) d F. Williams (8 New Imperial), 29⅘., tied.

University of Sheffield M.C.C.

At a meeting on the 18th inst. it was decided to form a motor cycle club for the University. Mr. Geo. F. Jones was elected secretary, Mr. J. D. Ashbury sports secretary, and Mr. H. Boothroyd treasurer.

Clitheroe and District M.C.C.

This club has been formed for motorists residing within a four-mile radius of Clitheroe. On the occasion of the first general meeting eighteen members were enrolled, which has since increased to thirty-four. Intending members should communicate with the hon. secretary, Mr. H. Sainsbury, 27, Castle View, Clitherne.

Bristol M.C.C.

Official results are now to hand of a well-supported trial to Torquay and back on the 16th April. They are as follows:

1 (Rudge-Whitworth Cup and gold medal), W. Le Brun (3½ Rudge sc.); 2 (gold medal), A. E. Tozer (5-6 Rudge sc.); 3 (gold medal), F. Baxter (4 Norton sc.); 4 (gold medal), G. F. Mann (7-9 Harley-Davidson sc.); 5 (gold medal and special prize for best amateur performance), S. Hodge (3 A.B.C.).

Public Schools M.C.

A small party of members left Barnet on Saturday last. On arrival at Woburn they were reinforced by a contingent from the Midlands. After a pleasant evening at the Bedford Arms Hotel, where the party stayed the night, the "touch nothing" run was continued to Towcester for lunch. After lunch the London members returned to their starting points.

Club News.—

Oxford M.C.

There were thirty-four entries for the sporting trial on the 16th inst. Official results, now to hand, are as follows :

SOLO CLASS.—1, C. S. Burney (3½ Norton), 1m. error; 2, E. Colgrove (4 Triumph), 3m. error.
PASSENGER CLASS.—1, R. J. Pigott (3½ Norton sc.); 2, N. V. Young (4 Triumph sc.).

Gloucester M.C. and L.C.C.

A mid-week half-day trial recently held by this club resulted as follows :

TRADE CLASS.—1, O. Blackwell (8 Enfield sc.); 2, R. Walker (5-6 Excelsior sc.).
AMATEUR CLASS.—1, L. Paynter (3½ Norton); 2, J. H. Boakes (3 Beardmore-Precision).

Bishop Auckland and District M.C.

Althongh delayed at the start owing to inclement weather, the hill-climb on Leg's Cross on the 16th inst. was brought to a successful conclusion, and several very fast times were recorded. Full official results follow :

2¼ H.P. CLASS.—1, M. Hunter (2¼ Connaught); 2, M. Hetherington (2¼ Levis).
2¾ H.P. CLASS.—1, R. Scoon (2¾ N.U.T.); 2, C. Barker (2¾ Douglas).
4 H.P. CLASS.—1, F. Miller (3 A.B.C.); 2, G. Dawson (3½ Rudge).
6-9 H.P. CLASS.—1, C. W. Smith (6 N.U.T.); 2, M. Gibson (6 Zenith).
SIDECAR CLASS.—1, R. Terrance (7-9 Rudge sc.); 2, T. Scaife (4 Norton sc.).
OPEN CLASS.—1, C. W. Smith (6 N.U.T.); 2, M. Gibson (6 Zenith).

Wallington and District M.C. and L.C.C.

Out of twenty-four starters only twelve finished the recent fifty miles reliability trial. The President's Challenge Cup, awarded for the best performance made by an amateur rider, was won by R. B. A. Dawborn (4 Triumph), whose total time error was 3½m. J. B. Baddeley (8 Zenith) and R. A. Green (3½ Norton) tied for second place with 6½m. error.

Surrey M.C. and C.C.C.

Formula results are now available for the recent hill-climb at Newlands Corner, and (with the exception of Class 5, which was decided on time) are as follows :

CLASS 1.—1, H. Mitchell (2¾ Beaumont); 2, F. P. Verney (2¼ Triumph).
CLASS 2.—1, E. Manning (3½ Norton); 2, H. C. Mansell (3½ Rover).
CLASS 3.—1, E. R. C. Scholefield (8 Morgan); 2, R. P. Robinson (8 Buckingham).
CLASS 4.—1, E. Manning (3½ Norton sc.); 2, E. R. C. Scholefield (Morgan).
CLASS 5.—1, T. G. Meeton (7-9 Rudge); 2, E. Manning (Norton).
CLASS 6 (Standing Start, Stop, and Restart).—1, H. Mitchell (2¾ Beaumont); 2, R. H. Dickinson (G.N.).
CLASS 7.—1, E. R. C. Scholefield (8 Morgan); 2, R. P. Robinson (Buckingham).

Fastest time was put up by T. G. Meeten in 30.8s., and specially good climbs were also made by Manning and Scholefield.

Bridgnorth and District M.C.C.

Recently this newly formed club organised a social run to the Wrekin, more than forty members attending. The hon. sec. is Mr. S. H. Ryder, 7, Waterloo Terrace, Bridgnorth, Salop.

Yorkshire Centre A.C.U.

Two further clubs, the Wombwell and District M.C.C. and the Mexborough M.C.C., have joined the centre, bringing the total number now in membership up to twenty-four.

Acton M.C.C.

This is a new club in this district, and motor cyclists who are interested should apply for particulars of membership to Mr. H. P. Dignam, 11, Cumberland Park, Acton, London, W.3.

Keighley M.C.

Official results have now been announced for the reliability trial held a fortnight ago, which was run over a moderately stiff course, including Ingleton, across Ribblehead to Hawes, and back *via* Kidstones Pass. Results : 1, Marshall Trophy and gold medal, H. Foulds (4½ B.S.A.) ; 2, silver medal, R. Caswell (4 Triumph) ; 3, bronze medal, H. V. Wilkinson (4 Triumph).

SUTTON BANK RECORDS GO AGAIN.

Big Twin clips 1 sec. from Last Year's Record Time of a 500 c.c. Single.

ON THE CREST. R. T. Cawthorne (Norton) crossing the finishing line at the summit of Sutton Bank.

THREATS of a transport strike prevented many potential competitors from attending the York and District M.C. open hill-climb on Sutton Bank, but this did not prevent those who did turn up from smashing all previous records for the hill.

F. W. Dixon (7-9 Harley-Davidson) made an ascent in the unlimited solo class in 1m. 17⅗s., thus clipping exactly 1s. off L. Mitchell's record made last year on a Norton. Dixon's time is a record for the hill for any type of vehicle.

In the passenger class, Dixon's Harley-Davidson, with a sidecar attached, clocked at 1m. 30s. dead—another record.

Full official times are appended :

CLASS 6 (Solo up to 1,000 c.c.).—1, F. W. Dixon (7-9 Harley-Davidson), 1m. 17⅗s.; 2, R. T. Cawthorne (3½ Norton), 1m. 20s.; 3, C. N. Sadler (7-9 Indian), 1m. 29⅘s.

CLASS A (Sidecars up to 500 c.c.).—1, R. T. Cawthorne (3½ Norton sc.), 2m. 0⅘s.

CLASS B (Sidecars up to 600 c.c.).—1, R. T. Cawthorne (3½ Norton sc.), 1m. 58⅕s.; 2, D. W. Rhodes (3¾ Scott sc.), 2m. 9s.

CLASS C (Sidecars up to 750 c.c.).—1, R. T. Cawthorne (3½ Norton sc.), 1m. 47⅘s.; 2, W. Wells (4 Norton sc.), 2m. 13⅕s.

CLASS D (Sidecars up to 1,000 c.c.).—1, F. W. Dixon (7-9 Harley-Davidson sc.), 1m. 30s.; 2, W. Wells (4 Norton sc.), 2m. 4⅖s.; 3, G. Grinton (7-9 Harley-Davidson sc.) 2m. 4⅗s.

CLASS 1 (Solo up to 275 c.c.).—1, W. G. Harrison (2¼ Velocette), 1m. 59⅖s.; 2, R. Horsle (2¾ New Imperial-Jap), 2m. 31s.; 3, Miss S. F. Wilson (2¼ Velocette), 2m. 41⅘s.

CLASS 2 (Solo up to 350 c.c.).—1, G. W. Sheperd (2¾ Beaumont), 1m. 55⅗s.; 2, W. G. Harrison (2¼ Velocette), 1m. 58⅗s.; 3, D. Brigham (2¾ Omega), 2m. 5⅕s.

CLASS 3 (Solo up to 500 c.c.).—1, L. Mitchell (3½ Norton), 1m. 24⅘s.; 2, G. M. Townsend (3½ P. and M.) and R. T. Cawthorne (3½ Norton) tied 1m. 31⅗s.; 3, W. Royal (3½ Norton), 1m. 40⅗s.

CLASS 4 (Solo up to 600 c.c.).—1, R. T. Cawthorne (3½ Norton), 1m. 25⅕s.; 2, R. W. Stafield (3¾ Scott), 1m. 37s.; 3, L. A. Runton (A.B.C.), 1m. 37⅗s.

CLASS 5 (Solo up to 750 c.c.).—1, R. T. Cawthorne (3½ Norton), 1m. 21⅕s.; 2, L. A. Runton (3 A.B.C.), 1m. 30⅗s.; 3, W. K. Stanworth (3½ Rover), 1m. 42s.

QUESTIONS AND REPLIES

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 2d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

LIGHTING REGULATIONS.

What are the lighting regulations with regard to sidecar outfits in England, as I intend coming over from Ireland for my holidays?—J.C.

A sidecar outfit must carry two white lights in front showing the full width of the vehicle and one red light pointing in a rearward direction, and placed at the off side.

DECARBONISING.

I should be much obliged if you could tell me the best way of decarbonising a cylinder (four- or two-stroke) with a non-detachable head. Is there a special tool for this job?—R.L.G.

It is usual to take off the cylinder and scrape and chip away the deposit with a long screwdriver, but special tools can be obtained from the leading accessory houses which enable the piston and cylinder head to be cleaned without removing the cylinder itself from the engine.

LOW POWER AND SINGLE GEAR.

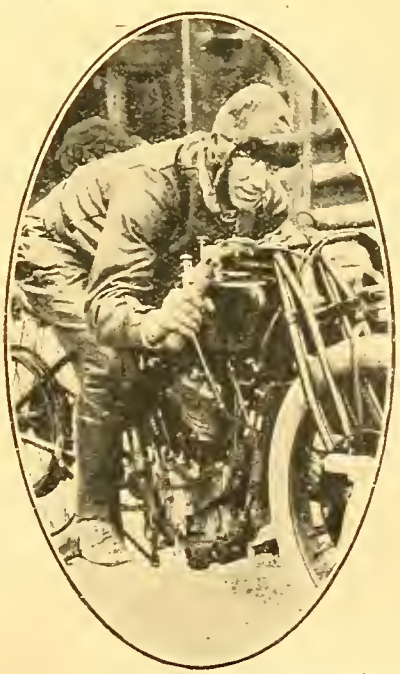
The machine I ride is a 2¾ h.p. four-stroke Lincoln-Elk (rather old), and it does not seem to have power enough to carry me up hills without help. The engine pulley revolves five times to one revolution of the back wheel. The carburetter is a Senspray, fitted, so I am told, with a 30 jet. Is this correct? The engine has been overhauled and fitted with new bushes and rings, but does not seem to be much better. My weight is about 12½ stone. Is an engine of this size powerful enough to carry me?—R.T.

It would probably be better to have a smaller engine pulley, which would give a 6 to 1 gear. The 30 jet should be quite large enough for your engine. You do not give sufficient particulars to enable us to give you any other information, but we would recommend you to obtain "Motor Cycles and How to Manage Them," as you will find therein many hints which will enable you to improve the running of an old model. The power is not great for a single-geared machine, and you must not expect too much from it when hill-climbing.

SPECIAL SILENCING FOR MORGANS.

Can you tell me if it is possible to fit (and if advisable—will it cause a loss of power?) a couple of Clair silencers to the exhaust pipes of a sporting model 1920 Morgan?—I.S.

It would no doubt be possible to fit additional silencers to the exhaust pipes of the sporting Morgan, but some Morgan owners dispense with the existing silencing arrangements (through the chassis tubes), and fit separate exhaust pipes with large expansion chambers. In all probability, the most effective way would be to run separate pipes from each cylinder to large silencers clipped on to the longitudinal chassis members. Any local sheet metal worker would be able to effect the alterations, while a good cycle mechanic would bend the necessary lengths of steel tubing for the exhaust pipes.



WINNERS AT THE OPENING BROOKLANDS MOTOR CYCLE MEETING.

E. B. Ware (Morgan-Jap), fastest in the time trials for three-wheeled cycle cars—speed 69.5 m.p.h.

J. V. Prestwich (2½ Diamond-Jap), second fastest time in the 250 c.c. time trials and winner of the race for the same class at 60.1 m.p.h.

In the 1,000 c.c. sidecar class, H. Le Vack (7-9 Indian sc.) covered the three laps at a speed of 63.2 m.p.h.

READERS' REPLIES.

In your issue of April 14th, in reply to "D.H.S." *re* 4 h.p. Douglas oiling system adjustment, there is a spring-controlled by-pass on the oil pump. Tightening up the set screw on the by-pass valve increases the oil supply, and *vice versa*. —J.S.H.

SELECTIVE GEAR SLIPPING.

I had exactly the same trouble as "W.M." (issue of April 14th) with the gear of an old Scott which I bought about two years ago. It was really suffering from an "overhaul" by a garage that evidently knew little of motor cycles and nothing of Scotts. Two things were wrong. (1.) Rollers much too large; they would not enter the taper space in bands, but expanded them by striking the corners of the opening. (2.) The thrust rod of gear was so adjusted that the gear pedal was at the end of its stroke before the gear lever was moved sufficiently far to engage the high-speed clutch. I put in rollers the correct size, and adjusted the throw of the pedal with washers, and have not had the least trouble since. I also had the radiator boil over, but this was due to sheer carelessness on my part plus ignorance of the carburetter—a B. and B. with pilot jet for starting. I left this on, and hence overheated through far too rich a mixture.—A.R.

Re "W.M.'s" query regarding the Scott gear (issue of April 14th): Low gear being used for starting, wear usually occurs on this drum first. As the low gear drum drives satisfactorily, I do not think rollers are worn. The gear should be adjusted thus: Place quick thread outer drum in position, but do not put thin washers or nut on centre spindle. Tighten up friction band until the drum binds when turned in either direction, while at the same time a "free" position remains when the drum is in the central position. The centre of this free movement must be arranged to be the centre of neutral position when the central actuating spindle is connected up. Washers arranged on the central spindle will adjust this. When correctly assembled with the friction band slackened off, tighten up band until pedal remains in position when depressed either way. If a little care is exercised in fitting the correct number of washers, a satisfactory result will be assured.—H.H.J.

DRIVING A DYNAMO.

Might I be allowed to inform your correspondent (who enquires on this subject in your issue of April 14th) that I am the patentee of a device known as the Hilstan dynamo drive system, from the rear road wheel of the motor cycle through the medium of skew gear and flexible covered shaft? This new system has been in constant use (and the throw-out-of-action device has not once been used) on my machine—a two-stroke lightweight, driving a Brolt 36 watt generator—for the past eight months, and the total mileage to date is 5,000, with no trouble whatsoever to the driving gear or the flexible shaft. I claim I have a most efficient system for driving a dynamo: *(a)* Non-slip transmission; *(b)* silence; *(c)* simple throw-out-of-action device operated by thumb and finger disengaging dynamo and drive, when accumulators are charged or lamps not required (not in existence on any other positively driven and non-slip dynamo transmission system); and *(d)* the driving gear can be fitted by a novice to 90% of machines at present on the market without interfering in any way with the structural build of the machine. As regards the difficulty of maintaining a constantly high speed, the dynamo driven by my system is unaffected by the various stresses of speed that are imposed where it is driven from the engine sprocket, *i.e.*, changing gears. The rise and fall in speed are gradual; the Brolt dynamo attains its full output at 1,800 r.p.m., *i.e.*, road speed 15-18 m.p.h.—STANLEY G. MUIR.

Important Dates.

Fri. April 29th. and Sat., April 30th—Ealing and District M.C.C. London-Holyhead Open Reliability Trial.

Sat., April 30th—Newcastle and District M.C. Travers Challenge Trophy Open Reliability Trial.

Sat., April 30th—Surbiton and District M.C.C. Open Inter-Team Trial (Private Owners only).

Sat. May 7th—B.M.C.R.C. Open Meeting at Brooklands.

Fri., May 13th, and Sat., May 14th—M.C.C. London-Edinburgh Run.

Sat., May 21st—Western Centre A.C.U. Open Hill Climb.

Wed., May 25th—A.C.U. Silencer Trial at Brooklands.

Sat., May 28th—East Midland Centre A.C.U. Open Hill Climb.

Tues., June 14th—Junior T.T. Race

Thurs. June 16th—Senior T.T. Race.

Sat., June 25th—M.C.C. Inter-team Trial for "The Motor Cycle" Cup

Sat., July 2nd—Bournemouth M.C.C. Open Reliability Trial.

Sat., July 2nd—North-Western Centre A.C.U. Open Speed Trials.

Wed., July 6th, and Thurs., July 7th—Arbuthnot Trophy Trial.

Thurs., July 7th—Essex County and Southend A.C. and Essex M.C. Joint Open Speed Trials.

Sat., July 9th—St. Andrews Speed Trials

Mon., July 11th, to Sat., July 16th—Scottish Six Days' Trial.

Sat., July 16th—Ilkley M.C. and L.C.C. Open Reliability Trial.

Sat., July 23rd—East Midland Centre A.C.U. Open Speed Trials.

Sun., July 24th—Motor Cycle Grand Prix Race in France.

Sat., July 30th—Newcastle and District M.C. Open Speed Trials.

Mon., Aug. 1st, to Sat., Aug. 6th—International Six Days Trial in Switzerland.

Mon., Aug. 29th, to Sat., Sept 3rd—A.C.U. Six Days Trial.

Sat., Sept. 17th—Grand Prix Race for Cycle Cars.

SPARKLETS

F.N. Four-cylinder Prices Down.

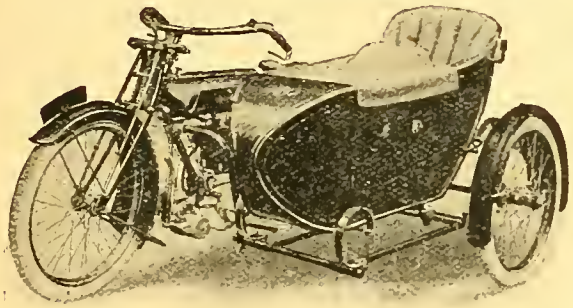
The price of the 7 h.p. four-cylinder Model A three-speed shaft-driven F.N. motor bicycle has been reduced to £150, and the price of the sidecar outfit to £188, hood and screen £7 extra. The specification has not been altered in any way.

Roads Improvement Association.

Although largely of a technical nature, the annual report of this body is well worth reading, for it shows how valuable work is being carried out behind the scenes in the matter of road improvement and traffic regulation. The Association acts on behalf of road users, both individually and collectively, as organisations, road clubs, trade associations, and the like. Despite the financial difficulties of the past year, the income of the Association shows a slight improvement on that of the preceding year.

A Comprehensive Fixture List.

The A.C.U. fixture list, price sixpence (the Auto Cycle Union, 83, Pall Mall, London, S.W.1), is a very useful publication, comprising, as it does, the scheme of affiliation to the A.C.U., a calendar for 1921, a list of A.C.U. events, the principal Continental fixtures, and a list of all the open and important trials arranged for this year. It also contains the names and addresses of the secretaries of the bodies affiliated to the F.I.C.M., and the names and addresses of the secretaries of the local centres of affiliated clubs, mentioning details of all the principal centres which have been instituted.

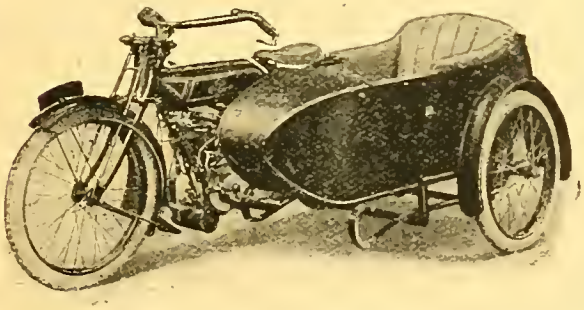


Catalogues Received.

Triumph Cycle Co., Ltd., Coventry: The latest catalogue of the Triumph machines contains an announcement of the recent price reductions. It is a well-illustrated book, and the reproductions of photographs of component engine parts show that the clean external design is also carried out internally.

Rennoc Sidecars, Rennoc Motors, Ltd., Rennoc Works, Victoria Road, Stroud Green, London, N.4: A comprehensive catalogue of Rennoc sidecars of all types, sizes, and weights, with a wonderful variety of bodywork. These bodies are built by the company itself. The list also contains sidecar accessories, such as screens, hoods, etc.

The Tryus Cycle Co., Poplar Works, Johnstone Street, Birchfields, Birmingham: A catalogue of the Silver Prince 2¾ h.p. two-stroke with Villiers Mark IV. (flywheel magneto) engine. This is a well-designed and well-equipped motor cycle with Albion two-speed gear. The catalogue contains hints on management, timing instructions, and a list of spare parts, while the producers have been enterprising enough to include a French translation.



Models of Economy
—THE COVENTRY EAGLE.

Model 44. 3½ h.p. Combination (green or black), with Sidecar with 26 × 2¼ tyre, as illustrated (including Mat and Apron)

£135 Net

or £37 2 6 down and 12 monthly payments of £9.

Model 66. 5-6 h.p. Combination, with Bulbous Back Sidecar (black, lined gold) as illustrated, with Luggage Compartment (including Storm Apron and Mat)

£165 Net

or £45 7 6 down and 12 monthly payments of £11.

The above machines are New 1921 Models, fitted with Sturmey-Archer 3-speed Gear Box, with Clutch and Kick-starter. Full specification sent on request.

GODFREY'S stock includes New 1921 Models of all the well-known makes.

GODFREY'S LTD.

208, GT. PORTLAND ST., LONDON, W.1.

¶ The price of the Coulson-B—the incomparable spring-framed motor cycle, with 4 h.p. Blackburne engine—is £126. There are 2¾ h.p. models at, of course, somewhat lower figures. The

COULSON-B

therefore costs more than many other excellent machines. Nevertheless, it can be said without hesitation that there is none that gives such good value for money as the Coulson.

The more you know of the Coulson springing the more must you be convinced of its essential "rightness" from start to finish. Examine every spring frame on the market; you will come back to the Coulson-B satisfied, and more than satisfied, that the claims we make for it are fully warranted.

¶ "The Book of the Coulson-B" tells you all about it. Let us send you a copy.

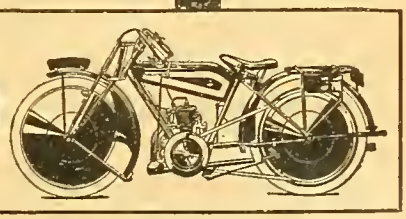
IVY
TWO STROKE



prices reduced by £7 to £12

Prospective purchasers of the famous IVY 2½'s and "Three's" will have noted with pleasure our reduction in prices recently announced in "The Motor Cycle" as coming into force as from April 7th last. We should like to reduce them still further but cannot do so without cutting down the "De luxe" equipment, *i.e.*, fitting a cheaper saddle in place of a "Brookes," cheaper tyres in place of "Dunlops," an inferior magneto in place of an "E.I.C.," and paring the quality of the machine generally. When you buy an IVY you get "The Aristocrat of its Type," a machine produced in our own model factory and not merely assembled. What we are compelled to purchase is the finest obtainable, and our product is backed up by a reputation of over twelve years' standing in the industry. The successful motor cycle is the one that stands the test of time, it becomes a make of repute, it's service is excellent, and it's second-hand value high. So if YOU are contemplating purchasing, think this over, and purchase an IVY, a "known" make, in other words—**A MAKE OF REPUTE**

FIRST ANNUAL GENERAL MEETING.

The First Annual General Meeting of the Company was held at the Registered Offices, 77, Cheapside, London, E.C.2, on the 13th April, 1921, Mr. Edward M. Illiffe, C.B.E., presiding.

The Chairman, in moving the adoption of the Directors' Report, Accounts, and Auditors' Report, said:

IT gives me considerable pleasnre to submit for your approval and adoption the report and the accounts for the first year of the Company's operations.

Turning first to the balance sheet, it will be observed that the issued capital of the Company is £250,000, upon which 10s. per share has been called up. This represents a paid up capital of £125,001—the two signatory shares being subscribed in full.

The revenue account shows that the net premium income, less all re-insurance and returns, amounts to £44,299 5s. 7d., interest and dividends to £3,397 16s. 7d., and other receipts to £432 16s., making a total income of £48,129 18s. 2d.

It will be observed that the claims paid and outstanding at the 31st December, 1920, amount to £12,894, and, after allowing for the expenses of management and commission, there is a balance which is being carried forward as a reserve for unexpired liability of £18,015. This sum represents over 40% of the premium income.

The expenses of management and commission amount to £17,220, and when it is considered that this is the first year of the Company's operations and that so small a sum as £4,101 has been charged to preliminary expenses, the item will not, I think, be considered unreasonable.

Your Directors regard this comparatively small premium with some satisfaction, as it is due entirely to the fact that the risks covered have been carefully chosen. The margins retained are in all cases well within the resources of the Company. It is, in the opinion of your Directors, more important to the ultimate success of the Company to secure a really sound premium income, although comparatively moderate in dimensions, than to show a large income which is so often the objective of new insurance companies, and which it is so easy to obtain if the Directors are willing to run the necessary risks. This, in my opinion, is entirely undesirable.

Before dealing with any Department of our activities specifically, I should like to say a word or two in general terms regarding our operations during the past year. As you are aware, the Company was formed on the 30th December, 1919, and had as its nucleus certain business controlled by The Autocar Insurance Department. You will, I am sure, be pleased to know that during the year arrangements were made whereby the whole of this business, together with certain rights, which, granted a favourable opportunity, should prove of considerable benefit to this Company, were transferred to us free of all cost.

In the early months of the year your Directors decided that it would be in the best interests of the Company were we to become members of the Fire Offices' Committee and the Accident Offices' Association, and we accordingly applied for and obtained admission to membership of both these Associations.

We were somewhat handicapped during the early months of our existence in that we found considerable difficulty in finding conveniently situated premises suitable for our Head Offices, but it is gratifying to report that we were eventually successful in securing our present premises in Cheapside, and we were enabled to occupy them in October last.

During the year we also decided to commence the underwriting of Marine insurance. I propose making a closer reference to this later on, but at this juncture mention it in connection with our organisation only.

Our organisation in connection with our business generally was developed in directions considered advisable, and agencies were created in certain parts of the world which should ensure a progressive volume of desirable business. At this period in our second year, despite the existing conditions of trade generally, we have every reason to be satisfied that these connections will prove of undoubted advantage to the Company in time to come. At present, apart from our Head Office here, we have three Branches in the provinces, each taking its part in the furtherance of our business.

I would now like to say a word or two about each of our Departments specifically. The first item in our Revenue Account is the income derived from our Accident Department. Motor Insurance forms a considerable part in this sphere of our activities.

It was, I believe, commonly considered during the year that we, by virtue of our acquisition of The Autocar Insurance Department, would have made special endeavours to develop Motor Insurance business. Your Directors have kept a very close watch on this particular class of business, and were of the opinion, despite the increases in premium rates that were made during the year, that it was still necessary to exercise great care in the selection of this class of business. This section of insurance business is dependent for success in the future on one of two things. We must either have further increased premiums or a reduction in claims costs, more particularly in the Accidental Damage section. We hope, and I believe this can be said with equal truth by other Companies transacting the business, that there will be no necessity to charge any higher premiums than are prevailing at present, and we are pleased to be able to say that there is now some indication, slight though it may be, of some reduction in the costs of replacements and repairs. Our own claims experience must, on the whole, be deemed very satisfactory, but this has been obtained only by very careful discrimination, endeavouring as we did not to write a large business, but contenting ourselves with a smaller volume, and that confined solely to the better classes.

The figures in the Fire Department are self-explanatory, and are, I think you will agree, quite satisfactory for a first year's Account. The present year will, we believe, show a considerable advance in this section of our business, and we hope to be able to show a result which will be considered equally satisfactory. Our relationships with other Companies in this Department are on a very friendly basis, and many of the larger offices have accorded us valuable support. We have every reason to believe that this support will be given us in still larger measure during the current year.

This brings me to the last and the most recently created of our Departments, namely, the Marine Department. I would be but repeating commonly accepted knowledge were I to reiterate that this is a department which calls for unremitting care and attention just now. We are fully cognisant of that, so much so that you will see by our accounts that our income for the three months during which the Department was in operation up to the end of the year was of very small proportions indeed. We are proceeding on very similar lines just now, and will continue to do so until conditions warrant a departure from that attitude.

I have now dealt with each section of our business individually, and before I cease I just want to say a word or two regarding our ideas for the future. The building up of an Insurance Company cannot of necessity be a quick process if we are to build well. Your Directors are concerned with building well. When we formed the Company we were not concerned with immediate profits; neither are we so concerned now. We are in no hurry to amass a huge premium income, our desire being quite the reverse. What we are anxious to do is to build up a business which shall merit the confidence of our Policy-holders, to the end that they may increase, and so that we may also continue to merit the confidence of the Companies with whom we are now doing business, and such other Companies with whom we expect to stand in closer business relationship during this and the years to come.

We appreciate to the full that the keynote of success in Insurance business is security. We are happily so constituted that we can apply our energies to this, which must be our main purpose for some time to come. We are anxious to make sure that our security shall continue to occupy a position which is at any rate equal to that of other Companies transacting a similar class of business.

My final word must be that of the appreciation which the Directors have for the work and energy displayed during the past year by the staff, both at Head Office and Branches. It is the loyal working together of all concerned which enabled us to close our first year showing the results we do.

I now beg formally to move that the Report and Accounts as submitted be adopted.

The resolution having been seconded, and carried unanimously, Mr. W. Coker Iliffe was re-elected a Director, and Messrs. Mann, Judd, Gordon & Co. Auditors.

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the Books and Accounts of the Autocar Fire and Accident Insurance Company, Limited, for the year ended 31st December, 1920, and have obtained all the information and explanations we have required.

In our opinion the foregoing Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs according to the best of our information and the explanations given to us, and as shown by the Books of the Company.

VILLIERS
TWO-STROKE ENGINE

Mr. A. E. Upton, of 20, Lillieshall Road, Clapham, S.W.4, writes us on APRIL 19TH, 1921, as follows:—

"I have had one of your engines running for 5 years without the slightest trouble. It is a fixed gear, petroil system, and I have covered 27,000 (twenty-seven thousand) miles without a fault. Youadvertise correctly when you say it is 'a little wonder.' I can take two up anywhere in reason."

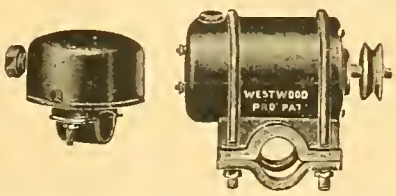
"DAYBEAM" Electric Solo Set

The Headlamp supplied with this set is our 5in Daybeam, a very powerful light-giver. The brackets are of exceptionally strong and handsome design. They carry the headlamp and also the (die cast) aluminium case. The accumulator is specially made for motor cycle lighting, and will brilliantly illuminate the head and the rear lamp for 20 hours if used intermittently. The tail lamp (our torpedo S.B.C.) is exceptionally strong and well made, and has a very attractive appearance. Each lamp is fitted with a switch, and one lamp may be used independently of the other. The outfit is despatched completely assembled, and 4 volt bulbs are fitted. The finish is ebony black and nickel plate.

Complete Outfit, List No. 30/1, Price £5 5 0
(If tail lamp is not required, deduct 12/6).



"DAYBEAM" Combination Set

The set comprises Daybeam 5in. Headlamp, Ideal Sidecar Lamp, and Torpedo S.B.C Tail Lamp. Each lamp is fitted with an independent switch, and is finished in ebony black with nickel-plated relief. The Accumulator (capacity, 6 volt, 40 amp.) is specially made for motor cycle lighting and will give very satisfactory service in use. Many have now been in use two or three years, and are as efficient as when first purchased. **All our Accumulators are specially made to stand vibration.** Ordinary accumulators are never satisfactory for motor cycle work. The hard wood case supplied with this set is finished ebony black, and is specially treated to withstand acid. This outfit is despatched completely assembled with bulbs and all necessary wiring, etc.

Complete Outfit, List No. 30/2, £7 7 0.

DYNAMO & SWITCH BOX

(Write for List No. 7.)
4.6 volts 20 watts. List No. 30/8, Price £7 10 0

TRIUMPH Motor Cycles.—Prices now reduced: 4h.p. chain-cum-belt drive, £115; 4h.p. chain drive, £125; Gloria sidecar, £50; lightweight, £70; exchanges or deferred payments.—P. J. Evans, 81-91, John Bright St., Birmingham. [4631

1920 Trimph 4h.p., Mills-Fulford sidecar, excellent mechanical order and appearance, Cowey speedometer, horn, Miller lamp, tax paid, mileage 3,000, tyres unpuncture; £150; any trial.—Jose, Falconers, Sawbridgeworth, Hertfordshire. [4677

TRIUMPH Combination, 3½h.p., 1910 frame renovated, N.S.U. gear, practically new engine, all fittings, good tyres, spares, excellent condition, licence and insurance paid; seen by appointment; £40.—Hutson, 96, Minard Rd., Catford, S.E.6. [4436

TRIUMPH Countershaft Combination, Gloria sidecar, 1919, Cowey speedometer, Dunlop extra heavies, Lucas lamps and horn, tax paid, perfect order not renovated, any trial; £120.—Harvey's, 47, South Lambeth Rd., S.W.8 (nr. Vauxhall Station). [5552

1919 W.D. Trimph Motor Cycle, as new, 3-speed, K.S., clutch, countershaft model, Cowey speedometer, P. and H. lamps, Klaxon, Ton-Sad, tool-all complete, ready to drive away; a real bargain. £100.—Hubbard, 5, Newcomen St., Southwark, S.E. [4350

All letters relating to advertisements should quote the number at the end of each advertisement, and the date of the issue. A33

MOTOR CYCLES FOR SALE.

Triumph.

WAUCHOPE'S, 9, Shoe Lane, London, E.C.4.—Triumphs, all models in stock, new chain drives, new chain-cum-belts, solos and combinations; also 4h.p. renovated models, £90 and £95; immediate delivery; supplied on easiest of easy terms; trade supplied. [5484

JUST Renovated, re-enamelled, and replated by Triumph Co., 4h.p. W.D. Triumph (latest decompressor), new gear box new oversize tyres, Lucas and Siemens lighting, tax paid, indistinguishable from new; £78, no offers.—Maclennan, 53, Mickleton Rd., Coventry. [X2635

GRAY and Raynes have 1920 4h.p. T.T. Triumph, specially tuned, very fast, long brass exhaust pipe, T.T. bars, lamps, horn, tax paid, and is as new, startes at a walk; £90, or cheaper mount and cash; see advt. Miscellaneous items columns.—8, Low Rd., Balby, Doncaster. [4499

TRIUMPH 1918 4h.p. Solo, countershaft, clutch and belt drive, perfect condition, recently overhauled, acetylene lamp and generator, tool-kit, etc., Government tax paid, owner gone abroad; £80, or reasonable offer considered.—Apply, Supply, Cox's, 11-13, Charing Cross S.W.1. [4494

TRIUMPH Late 1919 Combination, 3-speed countershaft gear, Renault blue bulbous back sidecar, Bluemel screen, hood, all lamps, Klaxon and bulb horns, aluminium discs, Jones speedometer, tools, spares, just overhauled, splendid condition and appearance, tax paid; £130.—Owner, 37, Smitham Downs Rd., Purley, near Croydon. [5028

TRUSTY 1912 Triumph, Bosch, horn, lamps, footboards, speedometer, Grado, kick-starter, renovated condition, and wicker sidecar; also 2-stroke Albion gear, Peco engine, A1 runner, sundries, A.K. knee-grips, pedals for Triumphs, new valve covers, old pattern sidecar body (wicker), sundry tubes and tyres, phonograph, 60 records, 50 gramophone records; what offers in market value?—Correspondence, 71, Waldeck Av., Bedford. [5076

1921 Triumph Combination, model S.D.C. de luxe, 4h.p., 3-speed countershaft,, hand clutch, and kick starter, new all-chain transmission, with Triumph gear box and patent spring drive, Gloria 1921 spring wheel sidecar, coachbuilt, purple and gold, beautifully upholstered light blue crocodile, bulbous back, 3 lockers, pocket, coverall, extra waterproof apron, rugs, etc., petrol tin carrier, luggage grid, leg shields, Triumph colours, and Easting wind screen, complete with all Lucas lamps, Cowey horn, Aco aluminium discs on all wheels, knee grips, spare valves, plugs, tyre, tools, mascot, and many other useful accessories, magnificent outfit, new this month, and absolutely unscratched, mileage under 120, tax and fully paid comprehensive insurance policy included, owner bought car and must realise; any trial, and ridden to purchaser within 100 miles; cost £225; will accept £165, no offers; first cheque secures.—Lieut. St. John White, Saxonhurst, Matlock. [4325

Velocette.

JULIANS of Reading have 1921 Velocette in stock. [0486

VELOCETTE, 1920, fully equipped, 1,200 miles, as new; £65.—Box 3,680, c/o *The Motor Cycle*. [5535

1915 Velocette, 2-speed, all-chain drive, fast, powerful, good tyres; £32.—3, Park St., Wellington, Salop. [X2596

IMMEDIATE Delivery can be given of the famous Velocette, 1921 model, 2½h.p., 2-speed, all-chain drive; £75.—Agents, W. Sparrow, Ltd., Osborne Garage, Yeovil. [1632

1921 Velocette, Model D3, 3-speed, £85; Model D2, 2-speed, £75; Model DL2, lady's open frame, £78; all in stock for immediate delivery.—The Premier Motor Co., Aston Rd., Birmingham. [X2524

VELOCETTE (late), 2-speed, B. and B., E.I.C., variable ignition, lamps, accessories, Dunlops, chain drive, licence, thorough trial; £38; exchange 2¾h.p. Douglas.—63, Solon Rd., Brixton. [5224

Verus.

1920 Verus-Blackburne, disc wheels, lamps, etc., ridden 250; bargain, £82.—Shepherd, Enfield Highway. Tel.: Waltham Cross 31. [0340

VERUS-BLACKBURNE 4h.p., Dec., 1920, K.S., 3 speeds, P.H. lamps, as new, £4 tax paid; 80 gns., offer, or and sidecar.—16, Rokeby Rd., Brockley, S.E. [4570

VERUS, late 1920 2½h.p. 2-stroke, 2-speed, clutch, K.S., lamps, horn, mileage about 500, £58; also 2¾h.p. Verus solo, £40; late 1920, hardly ridden, all accessories.—Virgo, 156, High St., Hounslow. Tel.: 125. [5283

IMMEDIATE Delivery of any Verus Model; cash or deferred payments; book your order now, and avoid disappointment later.—Burlington Motors, Ltd., South Side, Clapham Common, S.W.4. 'Phone: Brixton 2417. [0502

1920 Verus 2-stroke, 2-speed, K.S., no accessories, mileage only 400, condition as new; £50; exchanges or extended payments; approval with pleasure. —The Layton Garages, 90, High St., Oxford. 'Grams: Integrity. 'Phone: 581. [X2695

Our Trophy for Lightweights.

AS already announced, *The Motor Cycle* has again presented a valuable trophy to be won outright by the fastest lightweight in the Tourist Trophy Races. Last year the interest displayed in the development of engines under 250 c.c. in every way justified the inclusion of the class in the Junior T.T., and the competition among the miniatures was as keen as for the Tourist Trophy itself.

It cannot be expected that engines of 250 c.c. can beat those of 350 c.c., therefore until *The Motor Cycle* offered this special prize, there was no encouragement for manufacturers to concentrate upon the miniature which is now rapidly coming into its own as a fast touring machine. Owing to its low weight and remarkable economy it is a very desirable type to develop, and it has long been urged by this journal that it be given every chance to establish itself. Hence our offer in 1914 of a trophy for a genuine lightweight T.T. race.

It is interesting to recall the respective weights of the winning machines in last year's races. They were as follows:

		Average Speed.
1st in Senior T.T.	239 lb. (500 c.c.) ..	51.79
2nd ,, ,, ...	263 lb. (500 c.c.) ..	51.05
3rd ,, ,, ...	241 lb. (500 c.c.) ..	49.88
1st in Junior T.T.	217 lb. (350 c.c.) ..	40.74
2nd ,, ,, ...	252 lb. (350 c.c.) ..	39.41
3rd ,, ,, ...	258 lb. (350 c.c.) ..	39.37
1st in *The Motor Cycle* Trophy.	173 lb. (250 c.c.) ..	38.31

In both the Senior and the Junior Races the lightest mount won, as it must win if everything else be equal, and with present-day knowledge of metallurgy it should be possible to reduce weights considerably. The T.T. machines of a decade ago weighed approximately the same as their riders. In the 250 c.c. last year the winner of *The Motor Cycle* Trophy weighed a few pounds more than his mount. Pound for pound is an ideal for which manufacturers should aim, and we think that the Tourist Trophy regulations should include a maximum as well as a minimum weight. The T.T. races should not only develop more efficient engines, but better all round efficiency.

Weight is the keynote of economy, and economy is the most important factor to the greatest number of motor cyclists. It is not only for the good of the sport that we have again presented a Trophy for the miniatures; we wish to foster the light "go anywhere" solo mount for the "man in the street."

Over 100 m.p.h!

EXTRAORDINARY activity has been seen at Brooklands this year. Notwithstanding the fact that but four months have elapsed, practically all the classic records have been broken. For some extraordinary reason the speeds accomplished are not merely slightly in excess of last year's figures, but have jumped up by several m.p.h. Take, for instance, the epoch-making achievement of last Thursday, when for the first time a record of 100 m.p.h. was achieved by a motor cyclist in this country, subsequently increased to 106.5 m.p.h., at which the record now stands.

In considering the speed accomplished by the 1,000 c.c. machine at Brooklands last week, one can never overlook the fact that, even though the credit must go largely to America for the machines on which such exceptional speeds were attained, British-made 500 c.c. machines on which our home engineers specialise have already exceeded 92 m.p.h. Many consider that there is greater merit in the latter achievement considering the fact that the engine is but half the size of the big twins favoured by American manufacturers. In saying this we do not desire in any way to minimise the merits of the achievement of 106 m.p.h., but rather to show that this figure cannot be regarded as the maximum obtainable by an engine of such large dimensions. We expect to see the record beaten more than once during the present year, and it is even within the bounds of possibility that over a short distance the spectacular figure of 100 m.p.h. may yet be obtained by a 3½ h.p. machine before the winter arrives.

An index to the advertisements in this issue will be found on the page facing the back cover.

Occasional Comments

BY IXION

Some Legging Tips.

MY rough weather leggings this summer are a new type, made by the Express Manufacturing Co., of Rochdale Road, Manchester. They are designed by a practical rider, who has already added much to my comfort by a couple of wrinkles. Few of us like the baggy sensation and appearance of a heavy pair of leggings, supported only by a waist belt. My mentor adds trouser buttons to his overalls, wears his waistcoat outside the overalls, and runs a couple of extra leathers to the buckles of his braces, so that the leggings feel tautish, and hang well enough to show off their cut. In the second place he has taught me how to keep press buttons at the right fit. If they become slack, flatten the inner member; if they become tight, ease the inner member. Obvious enough, when you turn your mind on it; but how many of us suffer from tight or slack press buttons without doing a thing to them. These leggings are press buttoned down both legs, and the buttons are mounted in such substantial seams that the roughest user won't rip them away.

Stock Machines in Competition.

I AM getting rather tired of the frequent hints encountered in the press and in conversation to the effect that most awards in competitions go to "special" machines. There are just three kinds of competition in which a special 'bus scores, viz.:

(1.) Fuel economy trials.
(2.) Speed events.
(3.) Lightweight classes.

In all other events I would just as soon enter a stock machine purchased at random from any town or village agent as compete on one of the manufacturer's own entries. So far as ordinary reliability trials are concerned, whether they last half a day, twenty-four hours, or six days, a first-class award demands nothing more than a stock machine, which has bee carefully run in, is skilfully handled in the actual tria and encounters its fair share of luck. I am not sur that I should have included all lightweight classe in my exceptions, for I know one or two makes o which the standard issue is good enough for anything But with only 2 h.p. at call, and a heavy rider up there is no vast margin of power available: and I were putting a baby into the Six Days, I fear might address a tactful note to the works manage about a month before the start.

Success in Reliability Trials.

GIVEN a stock machine of 500 c.c. or over properly run in, the ambitious amateur shoul earn plenty of gold medals in a season, pro vided he can develop ability in three simple respects

(1.) He must diagnose trouble like grease lightning.
(2.) He must mend punctures about as fas as light travels.
(3.) He must be able to keep his saddle an steer on any surface.

Of these three qualifications only the last is reall difficult, and it is solely a matter of practice. It i also the most essential of the three, for a man ma ride in many trials without sustaining a single punctur and without striking any trouble of a perplexin character; but he cannot secure a solitary awar nowadays unless he can make clean ascents o extremely awkward hills. At the first essay suc rough-riding is alarming to a degree, and the novic is apt to fancy he can never acquire the knack o it. Let him spend one day practising on any hi which is very rough, very greasy, very loose, ver twisty, and very steep. At the end of such a practic he will feel a new man, and fear no climbable hi

casional Comments.—

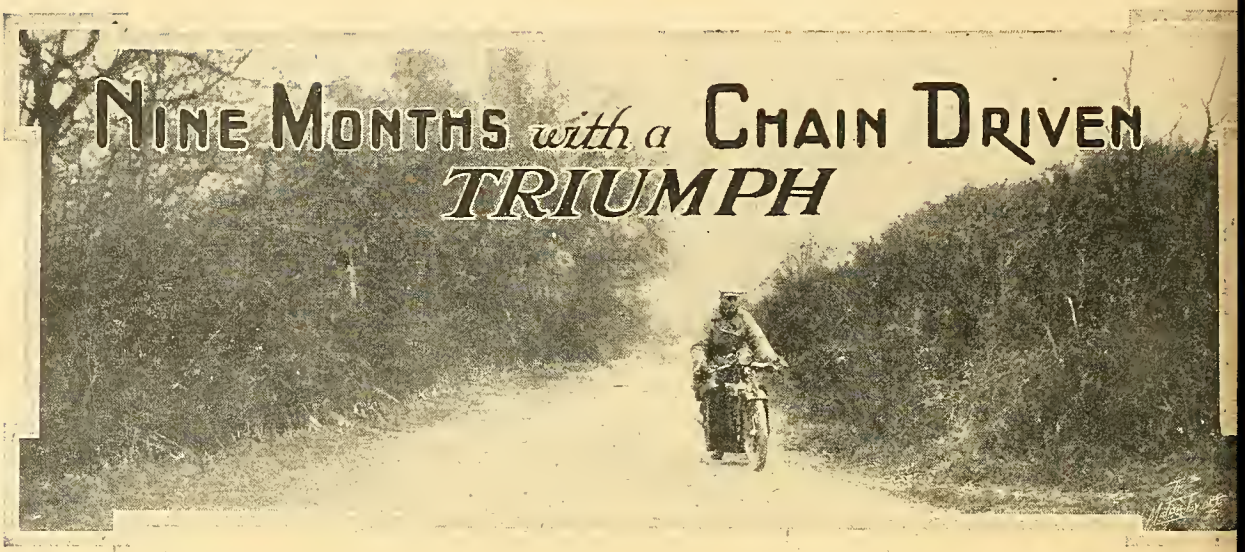
the second or third time of asking. Many freak lls are unclimbable at the first time of asking, ecause there may be but one practicable route up em, and a stranger is too busy holding on to his us to pick out that route at the first attempt.

Did they Seize?

THE heart of an experienced journalist is necessarily calloused into a substance like concrete, but appeals from motor cyclists in trouble always convert mine to its natural jelly. I must confess at I have never suffered any of those mysterious izures which have been mentioned by correspondents cently and which unseize themselves instanter, proing no evil after-effects. And before I can venture e timidest diagnosis of another man's woes, there e lots of data to be obtained, such as, "Was he ber?" "Does he know the difference between a lit pin and a con. rod?" and so forth. I have read e catalogue of mystic troubles with profound mpathy and certain vague speculations, but they ffle me. To contribute my quota, I suffered many lden seizures in 1911 with a new Rudge. It had bantam weight cast iron piston, with walls about as ck as a visiting card, and it used to distort like a ndle in the tropics. But it did not unseize so easily the various engines quoted by our correspondents; d it never gave up seizing until repeated overheat- had given it a permanent warp which I removed h emery cloth and a file, finally securing out of the nnant just about the finest 500-c.c. I have er owned. Since that date my only mysterious eizures have all occurred on Triumphs, and have proved to be severe pre-ignitions due to unsuitable rking plugs. My tentative solution of the majority such cases is duplex. Some may be due to an under-cooled sparking plug, and might be ended by trying a Lodge racing model. Others may be due to rather tight pistons—it does not matter how much oil is present in an engine if the piston expands enough to absorb all the available clearance; but I should not expect this trouble to end as suddenly as it began, though I have known a couple of cases in point.

Another Old Crock.

STUNG by the mention of Mr. Elyard Brown's 1904 Ormonde, another reader writes to say that he not merely owns, but also rides, an ancient 4½ h.p. Minerva twin, designed for racing purposes about 1905. On a fixed gear of 4¼ to 1, the machine averages 95 m.p.g., never overheats, and on a touring jet will keep up 35 m.p.h. indefinitely. Its owner has scrapped the accumulator in favour of an Ever-ready dry cell, which serves the ignition for about 1,000 miles; the coil is a C.A.V., originally manufactured for one of Harry Collier's racers, way back in the dark ages. Since I wrote the paragraph about the old Ormonde, I have personally encountered three more veterans still on active service, to wit, two chain-driven Beeston Humbers and a single-lever Quadrant.



SCENIC CONTRASTS IN YORKSHIRE.

Almost within sight of each other, and both barely nine miles out of Sheffield, these two pictures are both typical of the southern part of the West Riding. The riders are competitors in the recent Sheffield Traders' Team Trial, described in the last issue of *The Motor Cycle*.

NINE MONTHS *with a* CHAIN DRIVEN TRIUMPH

An S.D. Type Triumph in Daily Use as the Utility Mount of a Pressman.

THE normal road test of a motor cycle enables the initiated to form a very fair and clear idea of the capabilities of that machine. Nevertheless, it is daily usage, interspersed with occasional strenuous competition work, that proves the real merits (or otherwise) of any given type.

Since the end of May, 1920, we have had a 4 h.p. all-chain Triumph in constant daily use, and, since our mileage on this machine now amounts to over 8,000, it is possible to give a sound estimate of its qualities both as a hack and a competition mount.

The exigencies of the press demand that any breakdown shall be immediately repaired, and that no delay shall occur, therefore it was deemed advisable to carry a spare valve complete, spare chain links, a repair outfit, of course, and to hold a spare rear chain in reserve. Of these spares only the rear chain has been used, and though the first chain has stretched somewhat, being unprotected, it has never given trouble on the road, and appears good for a considerable further mileage. The front chain, which is entirely enclosed in an aluminium case, and runs in an oil bath, has been adjusted once only, and is still in perfect trim.

Undoubtedly the splendid results obtained from the chains are largely due to the excellent qualities of the shock absorber or "spring drive," as it is termed by the manufacturers. This spring drive has already been described in the pages of *The Motor Cycle*, its action being controlled by a quick-thread sleeve working against a compression spring. In action it provides a smooth soft drive, which enables the machine to be driven quite slowly through traffic on top gear.

In the first few weeks of its life the machine carried its owner safely round the stiff course laid out by the Ilkley Club for its open one day trial. On this occasion the owner first made the acquaintance of the noted Park Rash, and duly took the fearsome gradient on the wrong side and in the worst surface. In spite of this the ascent was simple as far as power was concerned, though somewhat slovenly owing to the wild attempts of the rider to steady the machine on the vile surface. However, the experience proved useful, and when the same hill was again tackled in the Scott trial an absolutely clean ascent was accomplished with both feet on the rests throughout. Among the more severe trial courses over which the Triumph has successfully carried its rider may be mentioned the Scottish Six Days, the Scott Trial and parts of the A.C.U. Six Days. In all its experiences no hill has been encountered on which the engine has had to be really exerted on low gear, and no mechanical failures have occurred. One possible exception to this statement can be made, for

The worst hills have no terrors for the Triumph, which has successfully negotiated everything encountered in 1920 trials.

ne Months with a Chain-driven Triumph.— uring the Scott Trial, the screw olding the clutch lever to its bracket nook out, with the result that both achine and rider became somewhat nvolved with a gate. The conse- uence was that a footrest was badly ent, and was forced partially through he front chain case.

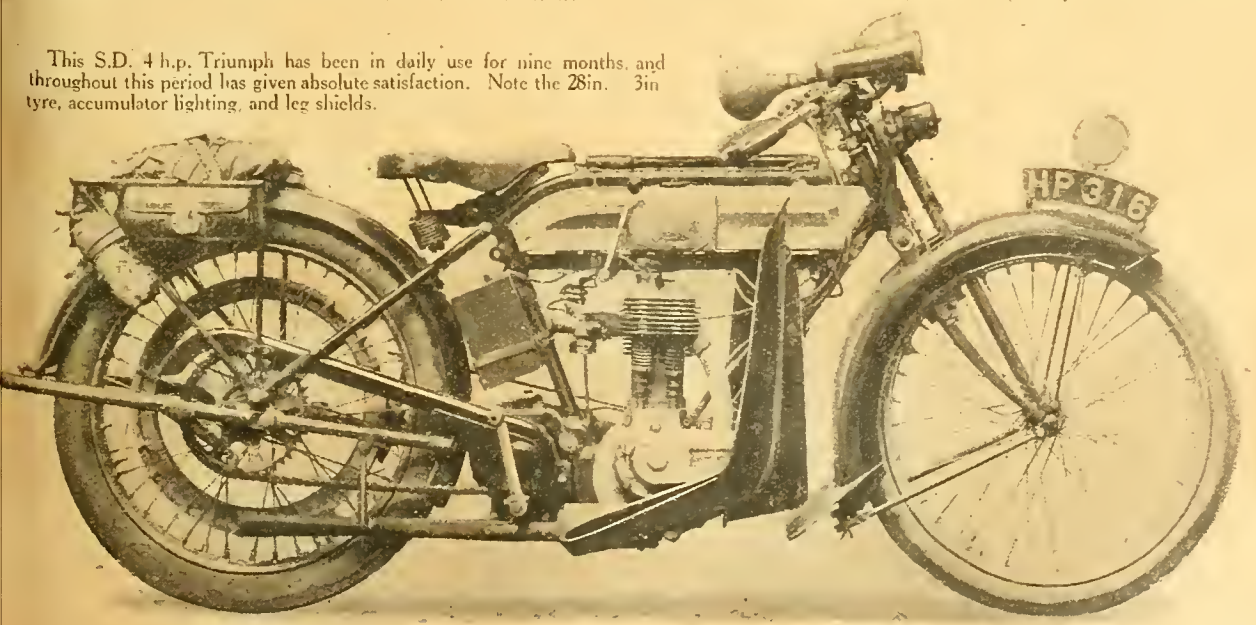
Wearing Qualities.

A pressman's motor cycle under- oes many vicissitudes, and many nd strange are the "gadgets" ested thereon; but in spite of this he Triumph has never grumbled, nd, with the exception of the ear chain already mentioned, shows o signs of wear after 8,000 miles hard work in all weathers. A almer Cord 28 × 3in. tyre has been tted to the rear wheel, and has sulted in greatly increased comfort nd freedom from punctures.

No machine is quite perfect, but ur grumble against the Triumph as regard to mudguards only. The ont guard can only be described s ornamental rather than useful, and e trouble has been obviated in the riter's case by substituting a ecially wide guard; it is only fair, owever, to add that the Triumph Cycle Co. have ow modified the design, and their new front guard not only neat, but appears to be effective.

The particular machine under discussion was one f the first of its type to be released to the public, nd was originally fitted with the old type spring rk. This fork had never given trouble on the road, it at the conclusion of the Scottish Six Days Trials, hen the writer arrived home at about four o'clock in the morning, the spring broke while wheeling the machine into its garage! Later the new enclosed fork spring was substituted, and has proved very successful. It is a distinct improvement as regards comfort and steering, and is neat and easy to clean.

A convenient replenishment pump. Despite complaints from certain quarters, the writer has found the measure given by this method to be quite reliable.



For several months a Claudel-Hobson single-lever carburetter has been used, and has given admirable results. Petrol consumption with this instrument is almost identical with that of the normal two-lever carburetter, and it is handier in traffic: on the other hand, the Triumph carburetter gives fractionally more power under normal touring conditions. For short runs on No. 2 spirit fuel consumption averages about 90 m.p.g., but as much as 120 m.p.g. has been attained on long runs with benzole and a slightly smaller jet.

External Condition.

Triumph finish and plating are almost proverbial, and, though no special precautions have been observed and the machine is seldom cleaned, the plating polishes up like new. This plating forms a violent contrast with that of certain proprietary accessories and fittings which are badly pitted with rust, though they have been in use for a considerably shorter period.

An exception must be made in the case of the rims which have suffered considerably from "Colonial surfaces." The rear rim is now protected by the 3in. tyre, but the front guard does not allow sufficient clearance for a similar increase in tyre size in front. In addition, the front rim brake (surely the best of its

This S.D. 4 h.p. Triumph has been in daily use for nine months, and throughout this period has given absolute satisfaction. Note the 28in. 3in tyre, accumulator lighting, and leg shields.

Nine Months with a Chain-driven Triumph.—

kind) has left its mark on the front rim, which is in consequence badly rusted. This point has not been overlooked by the manufacturers, who propose to use a dummy belt rim brake in the future.

A long shoe working on a dummy belt rim on the rear wheel provides an excellent rear brake, which is gentle in action, yet sufficiently powerful to lock the rear wheel when required. It is difficult to imagine anything more trustworthy than the 4 h.p. engine, which has run with clockworklike regularity. Although not capable of very high speed—about 45 m.p.h. is the normal limit—the Triumph will maintain an average quite as high as is safe on English roads, and always appears to have a reserve of power for emergencies.

Service with Minimum Attention.

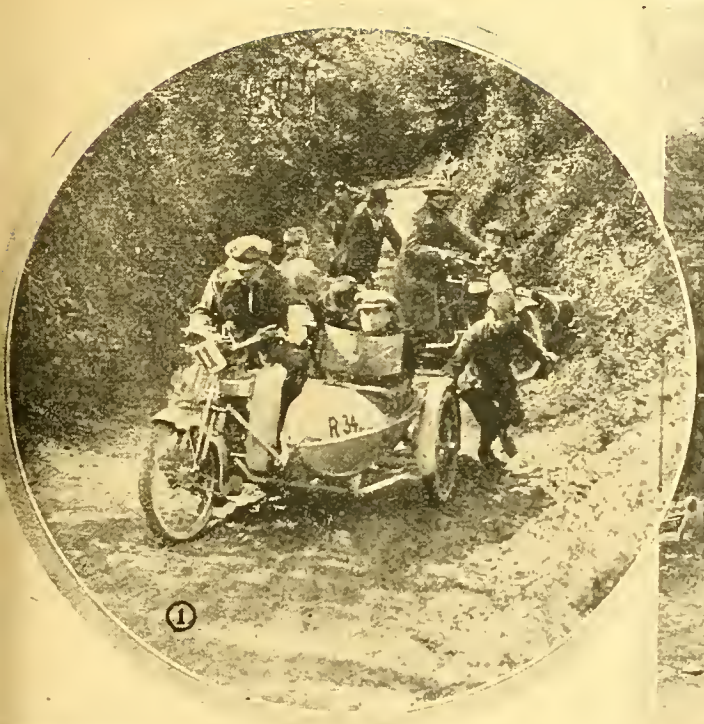
Edge Hill has been climbed on top gear of 4¾ to 1, and any hill requiring first gear is a hill indeed. The multi-plate metal-to-metal clutch, running in oil, is particularly sweet in action, though, like most of this type, it is apt to "drag" until the oil has warmed up.

Although primarily designed for dual-purpose work, and consequently on the heavy side as a purely solo mount, the S.D. Triumph, nevertheless, has travelled twelve miles every day in snow, rain, and shine with the reliability of a train, and is always ready for a week-end run or a severe trial without previous atten tion.

Being an enthusiast, the owner removes the cylinde for decarbonisation about every 2,000 miles, but ther is seldom enough deposit to warrant this precaution.

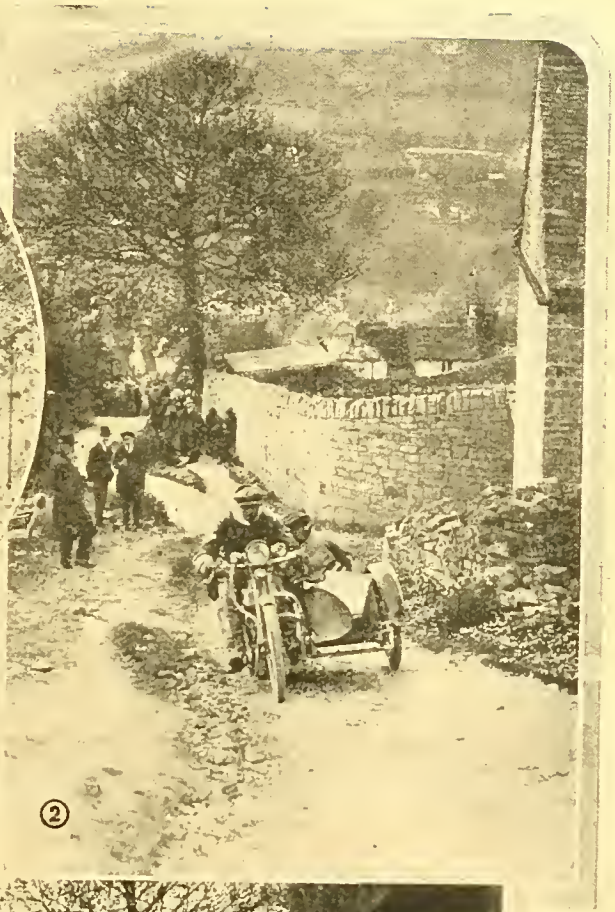
Lighting Equipment.

Every owner has his own fads with regard to equip ment, so that a list would prove of little value t readers; at the same time it may be of interest t some to know that plain accumulator lighting ha given perfect satisfaction throughout the winter. Hunt head lamp, fitted with a six-volt half watt bull is supplied by three small ex Government C.A.V accumulators, neatly packed in a wood box and carrie between the saddle tube and the rear mudguard.



A Unique tail light with a flash-lamp bulb is lit b a common bell battery attached to the carrier. Th battery originally cost 2s. 3d., and has been in us throughout the winter for a nightly run of six mile with a few spells of an hour or two thrown in. I spite of this, it appears to be as full of vim as eve and the owner will ever be grateful to a certain wel known competition rider and T.T. winner who gav him this valuable tip for rear lighting.

One may add that if its successor serves us a faithfully as has the S.D. Triumph we shall be sati fied indeed, for never has the writer owned a mor reliable and trustworthy machine.



AMERICAN CONCEPTION OF A HILL-CLIMB.

This remarkable photograph was taken in California on a gradient of 1 in 2. Such stunts, however, are purely spectacular, and whilst exciting for onlookers and riders, in no way help to advance design as do events in this country.

Bath and West of England M.C.

A sum of £1,220 has been raised by this club for the Mayor's Hospital Fund. The winner of the Douglas and sidecar has been announced as Mrs. A. E. Gunning, Holme Farm, Twerton-on-Avon.

Standard M.C.C. (Coventry).

Thirty-three riders competed in a short reliability trial on the 24th ult. Final results were as follows :

SIDECAR CLASS.—1, A. Berry (4 Triumph sc.); 2, J. Thomson (4 Douglas sc.).
SOLO CLASS.—1, W. Wilday (4 Triumph).

Cambridge County M.C.

Flying half-mile speed trials held recently by the Cambridge and County M.C. were somewhat spoilt by the inclement weather. Results are as follows :

600 c.c. CLASS.—1, H. Robinson (3½ T.T. Norton), 23s.; 2, G. O. Dawson (3½ Brough), 23⅘s.
UNLIMITED CLASS.—1, G. O. Dawson (3½ Brough), 23⅘s.; 2, H. Robinson (3½ T.T. Norton), 24s.
SIDECARS, UNLIMITED.—1, H. Robinson (3½ T.T. Norton), 28⅖s.
CARS UP TO 11.9 H.P. R.A.C. RATING.—1, K. Sanderson (8 Morgan), 33s.

Bradford M.C. and L.C.C.

It is estimated that 3,000 spectators attended the handicap speed trials held on the Yorkshire Moors on the 24th ult. Detailed results follow :

SIDECAR CLASS.

	Speed, m.p.h.	Award.
1. *C. P. Wood (Scott)	62.5	Gold medal
2. R. G. Brown (Norton) ...	56.6	Silver medal
3. H. Harrop (P. & M.)	41.66	Bronze medal

SOLO CLASS.

1. C. P. Wood (Scott)	73.17	Gold medal
2. *R. T. Cawthorne (Norton)	75.0	Silver medal
3. R. Turner (Douglas)	48.0	Bronze medal

*Fastest time in class, special gold medals.

Macclesfield and District M.C.

Detailed formula results of the flexibility hill-climb on Dumbers Hill on the 23rd ult. are as follows :

CLASS I.—SOLO UP TO 350 C.C.

	Gear used.	Ratio of fast to slow speeds.
1. A. Mottershead (2¾ Dot)	low ..	3.6
2. S. Leah (2¾ Calthorpe)	low ..	2.8
3. V. Sigley (2¼ Radco)	low ..	3.2

CLASS II.—SOLO UP TO 600 C.C.

1. W. Preston (3½ Sunbeam) ...	2nd	..	4.5
2. B. Caldwell (3½ Norton)	2nd	..	4.3
3. G. Sutcliffe (3½ Norton)	2nd	..	4.2

CLASS III.—SOLO, UNLIMITED.

1. W. Preston (3½ Sunbeam) ...	2nd	..	4.5
2. T. Simister (3½ Norton)	2nd	..	4.071
3. S. Holland (7-9 Indian)	2nd	..	4.070

CLASS IV.—SIDECARS UP TO 600 C.C.

1. J. Hopwood (4½ B.S.A. sc.) ..	low	..	2.4

(Remaining five competitors did not complete the slow climb.)

CLASS V.—SIDECARS, UNLIMITED.

1. S. Bann (8 Matchless sc.)	2nd	..	4.0
2. W. Preston (3½ Sunbeam sc.) .	2nd	..	3.7
3. H. Sutcliffe (4 Norton sc.) ...	2nd	..	3.4

Leeds and District M.C.

Formula results are now available for the petrol consumption test on the 24th ult., and are as follows :

1, Miss E. Spink (2¼ Triumph), 282 lb., 180 m.p.g.; 2, A. T. Jenkins (4 Triumph sc.), 1,012 lb., 90 m.p.g.; 3, J. E. Chappell (Dawson car), 2,520 lb., 48 m.p.g.; 4, J. W. Mollan (4 Triumph), 692 lb., 91 m.p.g.

North London M.C.C.

The night run held recently was a great success. The members, led by the vice-captain, Mr. A. J. Beaurain, started from South Mimms Church at 8.30 p.m., and proceeded along the Holyhead Road through St. Albans to Dunstable. An excellent supper was obtained there at the Red Lion Hotel, after which the party returned in the moonlight through Luton and Harpenden.

Eastbourne and District M.C.C.

Results of the first competition of the year, a flexibility hill-climb, are now to hand, and are as follows :

350 c.c. OR UNDER. SOLO

	Difference m. s.
1. S. Dunford (2¾ Verus)	9 29½
2. F. S. Aitken (2¾ Verus)	8 5

UNLIMITED SOLO.

1. G. E. Stacey (2¾ Verus)	6 13
2. T. Pyecroft (6 James)	3 53½
3. W. Craddock (4 Triumph) ...	3 35

UNLIMITED SIDECAR.

1. S. Dunford (7-9 Harley-Davidson sc.)	8 57
2. G. Bush (8 Matchless sc.) ...	7 43
3. E. A. Firrell (7-9 Harley-Davidson sc.)	6 57
4. D. Ratcliffe (8 Royal Enfield sc.)	5 20½
5. A. A. Jumpson (6 Royal Enfield sc.)	5 16

Cardigan and District M.C. and L.C.C.

Held recently on Pentricourt Hill, a well-supported hill-climb resulted as follows :

CLASS 1 (Solo up to 350 c.c.).—1, J. Edwards (2¾ Verus), 1m. 5s.; 2, Dr. Clare (2¾ Douglas), 1m. 14⅘s.; 3, E. V. Evans (2¾ Douglas), 1m. 22⅘s.

CLASS 2 (Solo up to 550 c.c.).—1, Handel Davies (3 A.B.C.), 55s.; 2, D. Evans (3½ Norton), 55⅘s.; 3, J. Thomas (3½ Norton), 55⅘s.

CLASS 3 (Solo up to 750 c.c.).—1, Dr. Lindsay (3½ Norton), 50⅖s.; 2, Handel Davies (3½ Norton), 52⅘s.; 3, W. M. Griffiths (3½ Norton), 56⅘s.

CLASS 4 (Solo up to 1,000 c.c.).—1, J. Thomas (3½ Norton), 51⅘s.; 2, A. O. Saunders-Davies (7-9 Indian), 52⅖s.; 3, G. L. G. Jenkins (3½ Norton), 1m. 2s.

CLASS 5 (Sidecars, unlimited).—1, J. Thomas (3½ Norton sc.), 1m. 14⅘s.

CLASS 1 (Novice. Solo up to 500 c.c.).—*1, M. Price (3½ Norton), 58s.; 2, D. J. Jones (3½ Norton), 1⅖s.; 3, D. Evans (3½ Norton), 1m. 5⅘s.; 4, D. Griffiths (A.B.C.), 1m. 10s.

*An objection was lodged against this competitor on the ground that he had won before.

CLASS 2 (Novice. Solo 500 c.c. and Upwards.).—1, A. O. Saunders Davies (7-9 Indian), 53⅖s.; 2, D. Evans (3½ Norton), 56⅖s.; 3, M. Price (3½ Norton), 59s.

CLASS 3 (Novice. Solo 2-stroke up to 300 c.c.).—1, A. James (2¼ Enfield), 1m. 52s.; 2, E. James (2¼ Hudson), 2m. 20s.

FASTEST TIME OF THE DAY.—Dr. Lindsay (3½ Norton), 50⅖s.

Bury and District M.C.

Results of the trial for the Shepherd Walsh Challenge Shield (which, as state in *The Motor Cycle*, was presented to th club at an annual general meeting on th 21st ult.) have just been announced, an are as follows :

SHEPHERD WALSH CHALLENGE SHIELD —1, J. Knowles (4 Triumph); 2, O. Entwist (3½ Sunbeam); 3, F. Crompton (4 Triumph).

Reigate, Redhill, and District M.C.C

Bore Hill, Dorking, was the scene o a lively hill-climb recently. There wa a large number of spectators. Fastes time of the day was made by J. Riddoc on an 8 h.p. o.h.v. Zenith, who mad the ascent at 53 m.p.h. Results :

CLASS 1 (250 c.c.).—1, G. H. Symonds (2 Levis); 2, H. Watkins (2¼ Triumph).

CLASS 2 (350 c.c.).—1, C. W. Verney (2 Douglas); 2, H. Hudson (2¾ Douglas); 3, G. H Symonds (2¼ Levis).

CLASS 3 (500 c.c.).—1, R. A. Green (3 Norton); 2, C. W. Bowen (3½ Norton); 3, W. Steyning (4 Zenith).

CLASS 4 (Unlimited).—1, J. Riddock (8 Zenith 2, R. A. Green (3½ Norton); 3, A. O. Gruzeli (8 Zenith).

CLASS 5 (Unlimited Sidecar).—1, J. Riddo (8 Zenith sc.); 2, A. O. Gruzelier (8 Zenith sc

Wellingborough, Rushden, and District M.C.C.

Fifteen classes were run off in the hil climb at Woddington, and G. Rex, Lu low, on a 3½ h.p. Norton, which he ro from Cambridge straight to the hil made fastest time of the day. Full r sults are appended :

FLYING STARTS.—Under 275 c.c.: C. W. E (2¼ Cedos), 37⅘s. Under 350 c.c.: C. W. E (2¼ Cedos), 36⅘s. Under 500 c.c.: G. Rex Ludl (3½ Norton), 29⅘s. Under 550 c.c.: G. Rex Lu low (3½ Norton), 29s. Under 750 c.c.: L. R. Hill (4 Norton), 32s. Unlimited: L. R. A. H (4 Norton), 31s.

STANDING STARTS.—Under 275 c.c.: C. W Ette, 41⅘s. Under 350 c.c.: C. W. Ette, 41 Under 500 c.c.: G. R. Ludlow, 33⅘s. Under 5 c.c.: G. R. Ludlow, 32⅘s. Under 750 c.c.: G. Ludlow, 33⅘s. Unlimited: J. H. Glover (8 Zenit 36⅘s.

SIDECARS, STANDING START.—W. S. Catt (7-9 Indian sc.), 51s.

FLYING UNDER 550 c.c.—H. Macleod Triumph sc.), 57⅘s.

UNLIMITED.—W. S. Cattell, 43⅘s.

Manchester M.C.

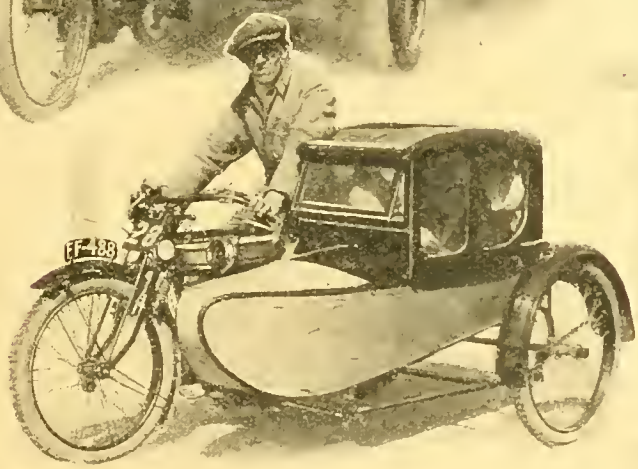
Ideal weather conditions prevailed du ing the club's hill-climb at Ruislip Edg and members spent a most interesti and enjoyable afternoon. The cour was over a measured half-mile, and sor very fast times were accomplished, follows :

SIDECAR CLASS.—Fastest, H. Reed (8 D Jap sc.), 34s. 1, C. E. Smith (6 Bradbury s O. E. Carter (3 A.B.C. sc.) and G. E. Cowley (Norton sc.) tied for second place.

SOLO CLASS.—Fastest, G. E. Cowley (Norton), 27⅘s.* J. H. S. Gardiner (4 Triump C. H. Elliott (3½ Norton), and H. Bostock Zenith) tied for first place.

*Fastest time of the day.

Each competitor was allowed two ru and the one with the least degree error was given the premier award.



WITH THE CLUBS.

LOUGHBOROUGH & DISTRICT M.C.C.

PORTHCAWL SPEED TRIALS.
A poor start in the unlimited class.

The A.C.U. One Day Trial

The Start.

Seventeen Stock Machines compete with Forty-three Others in a Searching Test.

FOR years the Auto Cycle Union has endeavoured to organise a trial for motor cycles taken out of stock, and to run them on the road in just the same condition as delivered to a private owner. At last its dreams have been realised.

Of the sixty machines in last Wednesday's trial, seventeen were chosen by A.C.U. officials, either from the stocks of the manufacturers or from the showrooms of agents.

The motor cycles and sidecar outfits were brought to Brooklands Track by means of lorries, but the three-wheelers were allowed to be driven down by road under observation, as they are usually delivered to customers in this manner. Consequently, these machines had some advantages over the motor cycles.

Stock motor cycles were handed to their drivers at 7 a.m. at the track, and the anxiety on the faces of their drivers, as they removed the wrappings from the machines to see that all parts were present, was quite amusing to watch. Cylinders and carburetters had been sealed by the official observers, while the contact breakers had been removed from the magnetos, placed in a toolbag, and sealed. This was to ensure that the start from Brooklands would be as if they had started out of the agent's depot.

Competing machines were then weighed to ascertain whether they conformed to the F.I.C.M. regulations. It is almost needless to say that Dr. Low, who was in charge of these operations, found that they all more than complied with international competition requirements, for these only call for minimum weights and mudguard sections, brakes, etc.

The next hour was solely occupied by the track test of the stock machines. They had to be pushed by hand to the fork, and were started off in batches of four for six laps (16 miles 539 yards), which they had to cover in one hour, during which time any adjustments might be made. There seemed to be few cases of difficulty in starting, but it was noticed that in several cases, as might be expected, generous use was made of the oil pump.

The Stock Machines.

Of the new mounts present among the stock machines may be mentioned the British Radial, whose rider, J. E. Manes, was in fear about his gear ratios, as were several other riders of the two-speed lightweights who anticipated the need for a three-speed gear box. The new chain-driven Wooler was another stock machine, unaltered since its appearance at the Show, save for a slightly different arrangement of the exhaust lifter. The two stock Hawker two-strokes were both ridden by famous airmen, one by T. O. M. Sopwith, who was last seen in an A.C.U. trial in 1904, and the other by H. G. Hawker, of cross-Atlantic flight fame. McNab's revived Trump-Jap with overhead valve engine was another new mount among the stock entry.

During the first hour two stops were made by F. W. Viles (Raleigh), A. G. Fenn (Raleigh), W. Hallett (L.S.D.), G. Dance (Sunbeam), L. Paynter (Norton), and Eric Williams (A.J.S. sc.). Thes stops were made for adjustment, fo which purpose this preliminary run wa instituted.

Though the weighing and examinatio had taken a little more time than wa anticipated, the start on the ninety mi road test was made punctually. Th course was very similar to that used fo last year's Arbuthnot Trophy Trial, an jokingly called the "worm in agony" s fearful are its contortions on the ma It comprised many stiff hills, but nothin a standard motor cycle should not climb and much stiffer grades such as "Ol Chalky" and White Downs in the neigh bourhood were omitted.

Owing to a mishap to our machine, w were rather in a quandary until we foun that a seat was at our disposal i "Bizzy" Bashall's Martinsyde sidec outfit. We were doubly lucky both a regards machine and driver. The 6 h. Martinsyde made light work of all th hills, and for skill few riders could bea the old hand at the tiller.

Excellent Arrowing.

Starting just before No. 1, C. I Michaelis (7-9 Harley-Davidson sc. whose machine we recently illustrated i *The Motor Cycle* to show its multitude o accessories, we set out to follow the cour to Succombs, the hill of the day. Eve contortion of the "worm" was clear marked with blue dye, each special poi was indicated by a clearly legible bla notice on a yellow ground, and an R.A.C road guide guarded every danger poi The greatest credit is due to Maj Dixon Spain for this part of the organis

The A.C.U. One-day Trial.—

tion, and to Mr. Loughborough and his numerous helpers for the organisation in general.

There was little of which to complain in the first part of the route, but after the acute turn in Leatherhead, where the Headley section was entered, there was a sharp corner to the left which our driver overshot. This was not on account of it not being clearly marked, but because he was travelling a shade too fast. Immediately after the turn came a sharp rise of about 1 in 6, which unseated several of the riders of low-powered mounts.

Succombs Hill.

Nothing further worth recording occurred till Succombs was reached after crossing the Caterham main road just north of that village. Very rough and steep at the approach, the gradient eases later and the surface improves; thereafter follows a really steep finish with a gradient said to be stiffer than 1 in 5.

The morning was cloudy and misty, heralding a fine day; consequently, the roads were dry. Notwithstanding the ideal conditions, Succombs took its toll of casualties.

Michaelis (Harley-Davidson sc.) came up in fine form, despite his load of gadgets. Sopwith was the first solo rider to arrive, and made an excellent ascent. Hinde (A.J.S. sc.) came up well, and so did Saddington (5-6 James). Watkins (3½ Enfield) climbed the rough and steep portion, but failed near the top. Duplock (A.J.S. sc.) got into difficulties, almost skidded into a wall, but recovered himself. A. G. Wall, riding a three-speed 2¾ Sedos, came up steadily. Waters (2¾ Douglas) followed the Enfield rider's example by taking the rough surface well and stopping higher up.

Good ascents were made by Olsson (Sunbeam), A. G. Fenn (Raleigh), Viles (Raleigh), Hull (Wooler), and Labin (Indian Scout), but the last named's driving was rather sketchy. Lewis (Zenith) dismounted and ran near the top. Harveyson, the star Indian rider, made a splendid ascent on his Scout, but on the whole the driving was poor.

Some Good Climbs.

H. R. Davies (6 A.J.S. sc.), with a member of *The Motor Cycle* staff as passenger, made a splendid climb, getting up easily. Schooley (Zenith) swerved somewhat badly, but got up satisfactorily. Dixon and Temple, the two Norton riders, came up well, but one of the Sun riders failed, as his mount was unsuitably geared. S. T. Tessier (8 Bat sc.) made a splendid ascent, waving and smiling to us as he passed, and this on 1 in 5 and a bumpy surface. Townshend (Zenith-Jap) was baulked by a competitor, but made a clever recovery.

Brandish (on a stock Humber) and Edmond (Triumph) came up in excellent form. Steytler (on the little P.V.) made a brave ascent; Hall (B.S.A.) passed going well, but with his stand trailing. Manes (British Radial) paddled; Fellows (Coulson), Jameson (Sunbeam), and F. W. Applebee (Levis), were in perfect form; but Hallett (L.S.D. cycle car) and Norriss (Sun) came to a standstill. Cunningham (on the stock P. and M.) made a good ascent, but his engine pinked slightly, probably owing to its newness. Paynter (Norton) and Reyre (5-6 James) came up well, but Parker (Sun) needed assistance. Mundy (Cedos) ascended without effort. Hartwell (Raleigh) did even as well as the others of this make. Greening, who rode a Sunbeam fitted with 3½ h.p. twin Jap engine, ran into the bank, and claimed a baulk. Next came a further batch of successful riders: H. F. S. Morgan (Morgan), Ellis (Matchless sc.), Elce (Morgan), Crow (on a ten and a half years old No. 7 Chater-Lea), and Cuffe (Metro-Tyler). Hawker (Hawker) came up well, as did his *confrère*, Sopwith.

SUCCOMBS—A TEST HILL WITH A SUGGESTIVE NAME!

(Left) Flat twins and a single on the worst hill of the trial. W. Brandish (4½ Humber), F. G. Edmond (4 Triumph), W. H. Jenks (2¾ Douglas). (Right) G. W. Hartwell (5-6 Raleigh) making a steady climb of the worst portion.

Luker (P. and M.) knocked slightly, but made a good climb; Pownall (Harley-Davidson) came to a stop; de la Hay (Sunbeam) missed his change from top to second, put his foot down, changed to bottom, and recovered; Williams (A.J.S. sc.) made a neat change down to first, and came up well; Pike (Levis) made a good ascent, as did Jones (Rover); but Jenks (Douglas) broke his belt at the base of the hill.

Half-way.

After Succombs, the course twisted and turned, including Polsteeple Hill, Cudham Hill—where Olsson stopped owing to the end of his muffler obstructing the air inlet of his carburetter—and then over improving roads to Brasted, bringing the competitors to the King's Arms Hotel, Westerham, where they enjoyed an excellent and quickly-served lunch.

F. J. Ellis (Matchless) and his passenger in good humour on Chalk Pit Hill. The steep bank formed a good "grandstand" for the many spectators.

The first half of the road trial had taken its toll. Prestwich (New Imperial-Jap) had his sprocket come loose; and Crow, after travelling well on his Chater-Lea, had a dry skid on Cudham, which buckled his sidecar wheel, and caused his withdrawal. Schooley (Zenith) arrived with a flat rear tyre. The parking of the machines was excellently arranged by Mr. W. H. Wells, who placed the machines in convenient positions for the restart.

Chalk Pit.

In the afternoon's run the chief hill was within about a quarter of an hour's drive of the luncheon stop. This was Chalk Pit, quite a steep rise over the North Downs, but not to be compared with "Old Chalky," which lies further to the east, and is only the mere pretence of a road. The worst gradient of Chalk Pit is not worse than 1 in 6, but the surface is loose and rough near the bottom, and there are two sharp bends. Michaelis (Harley-Davidson), Brown (3½ Sunbeam), Sopwith (Hawker), and McNab (Trump-Jap) all passed up in good style. Waters (2¾ Douglas) came by, his engine running beautifully; but a little further up it suddenly "conked out," probably owing to pre-ignition. Watkins (Enfield) fared no better than on Succombs, but shortly after a non-competitor, who was similarly mounted, made a fine ascent.

On the whole, the performance (as might be expected) was better than on the hill previously reported. Lewis (Zenith) stopped owing to a broken belt, while the L.S.D. was again unsuccessful. Manes (British Radial) was once more in trouble owing to an insufficiently low gear, and Norris (Sun) was in a similar difficulty. Pre-eminently good climbs were made by the Raleighs, the Morgans (especially the Morgan-Jap de Luxe, driven by H. F. S. Morgan himself), and the A.J.S.'s.

Jameson's machine came up in true Sunbeam style, but Dance had to mount slowly owing to a soft front tyre. The veteran F. W. Applebee made an excellent climb, and on accelerating past the last bad bend was heartily cheered. Edmond (Triumph), Harveyson (Indian), Fellows (Coulson), Temple (Norton), Cunningham (P. and M.), Jones (Rover), and Paynter (Norton) all put up creditable performances. Ellis (Matchless sc.) made a splendid ascent, but having lost his oil tank filler cap, the lubricant was welling over on the cylinder head and being flashed away in smoke.

Three More Hills—and Brooklands.

The course continued its windings, and there were still more hills to be negotiated, though none which could be accounted as really sever in these modern times. Those of note were White Hill, Wray Lane, and Pebblecombe.

Labin (Indian Scout) was seen to be very late at Reigate, his exhaust pipe having come adrift. Hull (Wooler) stopped near the eightieth milestone, and Viles (Raleigh) was observed making an adjustment near Effingham.

As he entered Brooklands, each man was sent up to the fork, and then, without stopping, to do his twelve laps (32 miles 1,077 yards) at certain minimum set speeds: 25 m.p.h. for lightweights and sidecar outfits up to 600 c.c., and 35 m.p.h. for the remainder.

There is nothing like Brooklands to find out weak spots in machines, and before long several engines developed unpleasant "tinny" sounds, and there were not a few casualties. These seemed especially hard when the machines had shown up well in the road test. Such was the case with the two Hawkers, which ran out of oil—one after doing four and the other five laps. Watkins (Enfield) retired, also owing to shortage of oil and a flat tyre. Labin (Indian Scout) had to give up, one cylinder cutting out owing to a defective magneto, while he also experienced a loose exhaust pipe and wheel bearing cap. The attractive violet-coloured three-speed Cedos ridden by Wall, after performing exceedingly well on the road, was withdrawn from the track with a flat back tyre.

Fuel Shortages.

Hinde (A.J.S.) had to return to the paddock owing to shortage of oil and fuel. The lubrication seemed to be a source of trouble to many while doing their speed test. Luker's P. and M. showed much distress after several laps, but recovered after generous use of the oil pump. Hartwell's Raleigh disclosed similar symptoms. Parker's Sun Vitesse retired in the speed test, while Fellow's Coulson and Richards's Velocette arrived in tow from the fork. Hull's Wooler shed its chain at the fork.

Altogether it was a most successful trial, which was useful and instructive as well as thoroughly sporting.

The distance to be covered after lunch, including the twelve laps round the track, was about eighty miles. Several machines exhausted either petrol, or oil, or both. Yet it is not uncommon for makers to guarantee 100 m.p.g. And all tanks hold at least a gallon of fuel.

The A.C.U. One-day Trial.—

NOTES ON THE TRIAL.

Mention has been made of the excellent marking of the route. It is interesting to note that it took twelve hours to accomplish, and over 3 cwt. of blue mixture, which is composed of ultramarine and whiting, was used. When the routes overlapped on the return journey, the turnings were not only indicated in blue, but the roads to be avoided were barred off by a red marking. The mixture was ladled out by hand from a large cask.

T. C. de la Hay, the well-known Sunbeam exponent, was really too unwell to start. This fact probably accounts for his poor gear changing on Succombs.

There may be some additions to the published results, as there are some doubtful cases to be considered.

It would not be wise for friends of Vivian Olsson to ask him the best method of wearing a muffler.

On Brooklands many competitors invited trouble by exceeding their nett speeds, thereby running risk of damaging their engines or exhausting fuel supplies.

OFFICIAL RESULTS.

1.—SPECIAL CERTIFICATES TO STANDARD STOCK MACHINES.

No.	Entrant.	Machine.	Driver.	Weight, Ready for Road.	Gear Ratio. Min.	Gear Ratio. Max.	Speed Test.

The L. S. D. three-wheeler on Chalk Pit Hill. As will be observed by the number of spectators machines on the roadside, the trial created a good deal of interest.

A WELL-DESIGNED PLUG.

A SPARKING plug which we have been testing embodies a most useful arrangement for adjusting the gap. This plug, the M.A.P., is of the detachable type with mica insulator; but, although the "earth" electrode is of the bar type, its disposition is somewhat unusual, in that it forms a bridge, diametrically, across the base of the plug body. A single central electrode projects downwards, so that its extremity (if the central portion of the plug is fully screwed down just touches the upper surface of the cross bar. The desired sparking gap is obtained by inserting a greater or less number of thin brass washers between the insulator gland nut and the top of the plug body. These plugs have given splendid results in a Scott engine over a long distance.

M.A.P. adjustable plug and plug cooler

Since our plugs were fitted, the makers (Millfords, Ltd., Bullock Street, Great Lister Street, Birmingham) have placed on the market the M.A.P. plug cooler, a solid piece of brass possessing three radiating fins to fit the central electrode.

The Editor does not hold himself responsible for the opinions of his correspondents.

All letters must be addressed to the Editor, "The Motor Cycle," Hertford Street, Coventry, and must be accompanied by the writer's name and address.

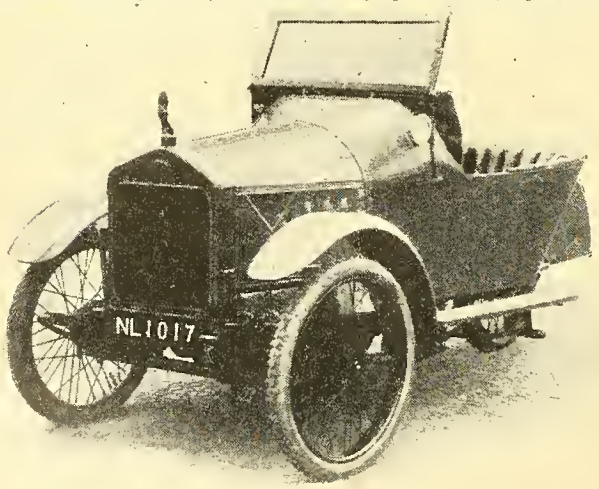
THIS YEAR'S ARBUTHNOT TROPHY TRIAL.

Sir,—May I suggest that, if possible, the Arbuthnot Trophy trial may be held in August this year and in future?

It is usually impossible to get leave from ships in full commission in July, but a month later, when the Fleet is giving summer leave, I think many more entries would be received. J.D., Lt. R.N.

ELECTRICAL PHENOMENON.

Sir,—Your correspondent Mr. N. H. Bailey is apparently somewhat of a novice in electrical matters. The simple explanation of his mysterious phenomenon is that the insulation resistance of his flexible was too low to prevent part of the high-tension current short circuiting to earth *via* the bearing. Consequently he seriously weakened the spark at the plug, and this, coupled with the fact that a magneto does not readily spark at walking pace, accounts for his difficulty.



Shortening the flexible removed the earthing effect. He will be well advised to stick to standard rubber-covered high-tension cable in future. F. E. SCHOFIELD.

FIRTH OF FORTH FERRIES.

Sir,—It will be known to many of your readers that the N.B. Railway Co. have enormously increased the ferry charges at Queensferry by some 400% on cars, and, I believe, by the trifle of 900% on motor cycles; all on the well-known "principle" that the value of an article or service is what it will fetch, monopoly or no monopoly—parliamentary or other.

According to *The Scotsman* recently, the said railway company have lodged at the Scottish Office a Provisional Order for the taking over of Burntisland Harbour (whence the Granton ferry runs) "*without any price being paid or consideration given except the discharge by the company of the money advanced.*"

This would seem to be an excellent and very appropriate opportunity, by opposition to the Order, to obtain a reversion to more reasonable charges. W. L. SPENCE.

A RE-MODELLED THREE-WHEELER.

Given enthusiasm for the work and the necessary tools, it is surprising what can be accomplished with the most unpromising material. Here is a three-wheeler of quite pleasing appearance re-modelled from an old Chater-Lea chassis by Mr. H. Robinson, a blacksmith, of Loughborough, Northumberland. The engine is an old water-cooled single-cylinder De Dion.

RADIAL ENGINE DESIGN.

Sir,—With reference to the letter appearing in the correspondence columns of *The Motor Cycle* of the 14th ult., over the name of Mr. Redrup, in which are criticised several features of my design of motor cycle: whilst appreciating any criticism privately, at this juncture I do not wish to enter publicly into a discussion of the relative merits of an experimental design. I am replying to Mr. Redrup in a private letter. GEORGE F. HALLIDAY.

QUEER BEHAVIOUR OF A TYRE.

Sir,—My own experience of a tube fitted to the rear wheel of my Morgan may be of interest to your correspondent. The tyre behaved in precisely the same manner as he describes, and after much trouble was traced to a leaky joint, which had at some time been doubled up and so loosened. Sometimes the tube held the air apparently indefinitely, and at others could not even be blown up. W. WATSON.

Sir,—Your correspondent "C.P.V.T." concludes his letter in the issue of the 21st ult. on the "Queer Behaviour of a Tyre" by stating that "the tube is in perfect condition, etc." The eccentricities he refers to, however, would not be accepted by the generality of motor cyclists as evidence of perfection in tyres.

If there is no unsealed puncture in the tube the leak must necessarily have been *via* one of the (apparently) *sealed* punctures or *via* the valve or valve seating. The symptoms point to a patch which only develops a leak when warmed up in driving, or a valve seating which only develops a fault when the tube is *stretched*. Either of these faults would be aggravated if the tube adhered to the cover owing to lack of French chalk. The fact that the tube suddenly deflated on opening out suggests that this was so. The sudden pull of the outer cover would stretch the tube away from valve or patch and cause the mischief. The "give" of the cover would be sufficient to do this, even if the cover did not actually "creep."

I had a very similar experience some time ago. I never found the leak, but rode many weeks afterwards on the same tyre without further trouble after dusting the tube with French chalk. C.S.

Sutton.

Sir,—With reference to "C.P.V.T.'s" letter, I was almost writing to you last week for advice about a tyre of mine which behaved exactly similarly. When I finally found the puncture on the fourth occasion of having the tyre out, it proved to be at the point where the tube had been joined up. The ends of the tube are telescoped for about one inch, and it is quite understandable that the air pressure in the tube might very well seal the leak completely at times.

I can offer no suggestion for finding the leak in a case of this sort. Mine, I imagine, got gradually worse with repeated handling of the tube until the leak finally became permanent, and I was able to find it in the usual way.

I had thought perhaps of trying to put some coloured liquid in the tube which would betray the leak the next time the tyre went down, but I did not know of a suitably harmless liquid. A. K. GORDON.

UNDERSIZE NUMBER PLATES.

Sir,—Having recently received the tip from a friend who had been caught, I looked up the requirements of the law regarding number plates, and as I read these, it is necessary for each letter or figure to take up a width of 1½in. (there appears to be no exception for the figure 1), and for there to be at least ½in. between any two letters or any two figures, and ¾in. between the last letter and the first figure. This applies when the letters and figures are in one line.

On these measurements, for a number consisting of two letters and four figures, it appears to be necessary to have a plate 10½in. long, provided the necessary ½in. margin is left at each end. I have just been trying to obtain a plate of this length but without success. Although I have tried several London dealers, the longest I have seen is just over 9in., which I am told is the usual size. FC 3154.

London, S.E.2.

ANOTHER PROBLEM—COMPLETE WITH THE SOLUTION.

Sir,—Recently my machine began to give trouble. Instead of one hundred miles to the gallon, I only got forty. All sorts of adjustments were tried without effect—jets, plugs, decarbonising, rings, exhaust, brakes, etc. At last a bad rattle developed, like that which would be caused by a loose lens in the lamp. The lamp was stuffed with rag. Still the tinkling rattle. By sheer accident, the magneto chain cover was examined, and lo! here was the trouble. The chain had scored the cover, and had been acting as a brake. This cover on the Levis is only held by a central screw, and it (the cover) had gradually worked down on the chain. It is now fitted with a double spring washer, and will be watched in future. When the cover and the cause of the friction were removed, the cycle was tried. It just romped away, and the rider, after so long riding at less than the limit, was afraid to give full throttle.

We are warned that with lightweights we should eliminate all friction, but in this case the cause was baffling.

Richmond. JULY.

MUD—OPPOSITE VIEWS.

Sir,—May I venture to add my opinion to that of your correspondent "Unapproachable"?

I certainly object to mud, but am quite willing to put up with it for the sake of the sport.

When riding I generally wear trench boots, breeches, and a mackintosh, and find that they are ideal.

One cannot expect a motor cycle to be as comfortable as a car; it was never intended to be, so rather let manufacturers look to the general efficiency of the 'bus and cut out such unnecessary things as leg shields, etc. NORTON.

Tooting Bec.

Sir,—Referring to "Unapproachable's" naive query in your issue for April 14th, does he still carry mudguards on his machine? If so, why? They do but increase its weight, impair its speed, and deprive him of a portion of delectable mud that he so thoroughly enjoys.

Presumably, also, he finds a keen delight in periodically scraping it off his machine, particularly the engine, or does he regard it as a preservative, and leave it on?

But enough of such fooling. The *bête noire* of every man who daily uses his mount to get to and from business is mud, and, unfortunately, the majority of British motor cycle manufacturers are under the impression that we suffer from a climate as dry as the Sahara.

Your mud-bespattered readers laugh cynically as they peruse the innumerable advertisements in your papers enlarging upon the exquisite finish, sound constructional details, high-grade equipment, etc., of the respective mounts, ahead of all rivals and representing the acme of refinement. The jest is improved by the addition of an illustration showing a machine with the usual flimsy mudguards that serve but to collect the mud and spray it all over the rider.

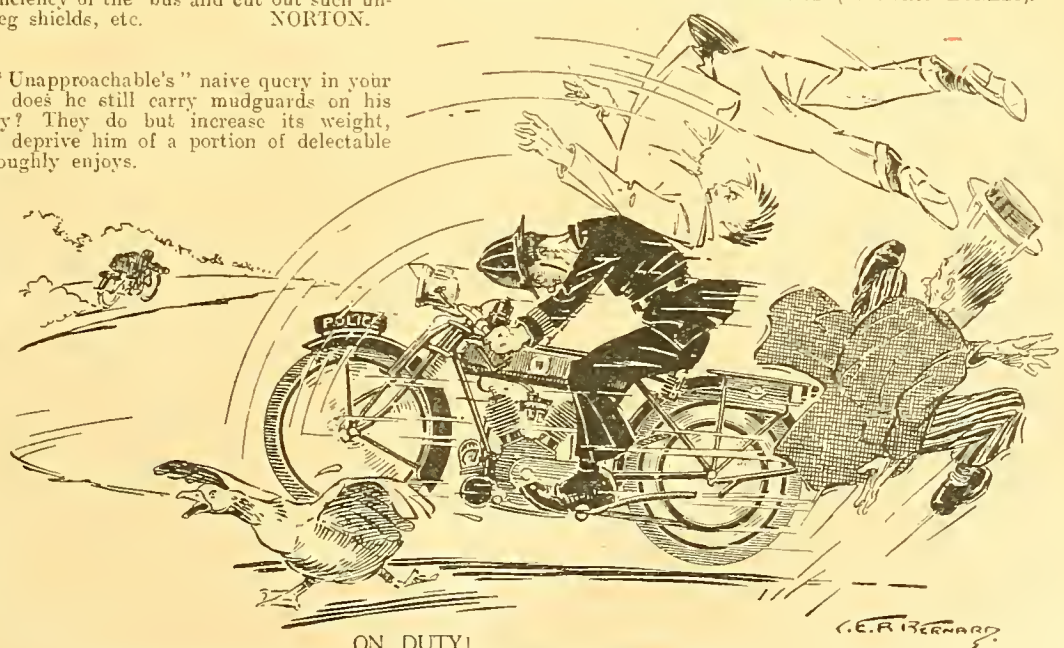
It is a difficult matter to find a lightweight two-stroke that is equipped with adequate protection from mud, and likely to appeal to the daily rider.

Apparently, little attempt is made to cater for a market that is growing by leaps and bounds. Possibly manufacturers are not sufficiently aware of a business man's requirements.

Daresbury. UGH!

DOPE FOR "IXION."

Sir,—"Ixion's" "Occasional Comments" have just again, as for many years past, lit up the desert waste here. It is, however, in connection with his "S.O.S." for waterproof gloves that I venture to offer balm for his dear old soul.



Now, read, mark, etc., the following:

The white of an egg (raw) beaten up, makes the best size to coat over gilding, bronze work, or gold paint. The objection gilders have to its use is that it cannot be removed by any ordinary process when regilding is required. It is imperishable in itself, and insoluble in water, ether, spirits, or turpentine. It is also more hermetic than glass, or any varnish or glaze, therefore it protects from the atmosphere or the elements whatever is under it.

Although infinitely closer in its texture than any varnish, it never becomes brittle, as all gummy varnishes and sizes do when they dry hard. It is always tenacious and elastic in its texture and adherence. It can be folded, *i.e.* silk, paper, parchment, velvet, or other fabrics may be folded, when coated over with this egg medium, without cracking in the slightest degree, no matter how many years may have elapsed since it has been used, as it stretches like india-rubber.

Should "Ixion" have no domestic supply from which to make up this "egg-flip," Messrs. Reeves and Sons, the artists' colour people, can supply him with a specially prepared egg medium. One of his tame slaves can supply the energy to coat all his old gloves, and any other garments if necessary. This medium might also possibly meet another of his requests for a protective armour for all twiddly-bits liable to rust. Some of the "knuts" might, with the addition of an opaque tint, like to try the medium in lieu of special racing kit to lessen wind resistance.

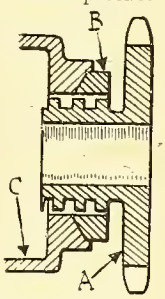
Khartoum. OMAR HADDEED (THE IRON DONKEY).

ON DUTY!

Shall we see this sort of thing on the roads when the police are thoroughly motorised?

ON THE ROAD WITH A 6 H.P. B.S.A. SIDECAR.

Sir,—Being the possessor of one of the new B.S.A. twin sidecar outfits since last summer, I was much interested in the article in your issue of the 14th April. A few remarks on my own road experience may be of interest.



(*a.*) My petrol consumption has been *exceptionally low*, not "on the heavy side." Over 2,874 miles the figure works out at 60.3 m.p.g., based on the amount of petrol purchased and neglecting losses due to short measure and evaporation. I experimented with jets giving various deliveries, and found 90 c.c. per minute to be best.

(*b.*) My experience regarding the engine corroborates yours. I have never seen signs of overheating. I have never heard it "pink" yet (it is kept clean, of course). The torque developed at comparatively low speeds is exceptionally good, and it has given absolutely no trouble.

As you state, the valve gear seems a little noisy, but I think this is more apparent than real, owing to the very efficient silencer.

(*c.*) As in your case my passenger was uncomfortable, although only at first and until the front edge of the sidecar seat was raised by about 2½in.

(*d.*) The felt washer fitted to the gear box in some of the earliest machines is not very efficient as an oil seal. The design has been improved in later models, and I have had my machine brought up-to-date. A new type chain sprocket

An exaggerated view of the B.S.A. gear box sprocket referred to in the letter of Mr. J. Watt. M.I.A.E.:

A. New type sprocket

B. Brass ring, to replace felt washer, fixed to casing by four No. 4 B.A. screws (about $\frac{5}{64}$in. clearance) on the sprocket boss

C. Casing of gear box

can be obtained from the makers, and happily this sprocket, which has an oil-return screw on the boss, can be fitted to the early type case with comparatively little trouble. There is now absolutely no oil leakage at this point.

(*e.*) The gear box clamping nuts *must not* be pulled up hard with a 12in. engineer's spanner. The double-ended key supplied with the kit should be used.

(*f.*) On taking delivery of a new machine one should be careful to mount the sidecar wheel with the brake rim on the same side as the others. I met a rider of a brand new machine in distress owing to the agent having assembled the wheel the wrong way round, so that one of the ball races had screwed ont.

(*g.*) I agree with you that the latest model twin is a worthy co-product of the well-known single. Omitting the war period, I have owned a sidecar of this make from 1912 to the present day, each year's service including a very successful summer tour of 1,000 to 1,200 miles.

JAMES WATT, M.I.A.E.

Sir,—Permit me to endorse every good thing that you say regarding the 6-7 h.p. B.S.A. machines. I have driven one of these excellent outfits some 2,000 miles, and am satisfied that I could not get better service from a sidecar of any make.

Your remarks upon the engine are entirely to the point. It will maintain practically maximum speed all day long without tiring. On a trip from the Midlands to Nevin with my wife, son, and luggage, *via* Bettws-y-Coed, Capel Curig, and Beddgelert, I came out of top gear once only, viz., on the short, steep Wyle Cop, in the heart of Shrewsbury Town. The valve gear noise, which is really not extravagant, is, I think, due to steep cams, and when one remembers the function of the latter one is inclined to rest content.

As regards petrol consumption, I expect the trial machine was fitted with a No. 30 jet, which I believe is the size provided when the bicycle is sent out of the factory. With this jet, and before the engine was fully run in, I got 40 m.p.g., but soon improved to 50-55 with a No. 27 in the warm weather of the autumn. I confidently expect to attain sixty-five when Mr. Binks weighs in with the carburetter which I have on order.

Your article states that "only a few tools were supplied." This sounds like the standard outfit. The few tools furnished with my mount were mostly quite good, but the spanner which is alleged to free the induction and exhaust pipe lock nuts broke its "pip" at the first wrench. A new one of similar type, but about ¼in. thick, which I got made specially, serves admirably. Another, also specially made, doubled up at the mere idea of shifting the wheel bearing locknuts. In place of this I now have a spanner of the box type with projections to fit all four slots simultaneously.

No mention of front fork springing, which I find beautifully elastic—in fact, ideal—upon a decent road, but bumpy in pot-holes. Of three similar outfits (including my own) with which I am acquainted, all show a slight flattening of the fork girders, and there is further evidence of bumping upon the mudguard and head tube. Probably it is a case of "the devil and the deep sea," and the alternative a form of springing which would be too inelastic upon roads as they *ought* to be, but only sometimes *are*. T 161.

Wolverhampton.

LIGHTS ON STATIONARY VEHICLES.

Sir,—I was much interested in the notes on "Lights on Stationary Vehicles" which appeared recently. The practice of leaving motor cycles and cars by the roadside with strong lights facing in the wrong direction is, I consider, very dangerous.

Just before the war I was riding my motor cycle late at night through a village near Sheffield. A car came round a bend in the road about a quarter of a mile ahead. Its head lights were very bright and dazzling. When I got near to it I found myself mounting the footpath, and in another second was wrapped round an unlit gas lamp pole, fortunately without much damage.

The car, of course, had, after turning the bend, continued a little way, and then crossed the road to the wrong side to let down some passengers. Cannot this practice be made illegal?

EX-CAVALRY D.R.

Sheffield.

SUMMARY OF CORRESPONDENCE.

That machines should be sold on a maximum m.p.h. price basis (*i.e.*, £1 per mile for solo mounts, and £2 per mile for sidecar outfits) is the suggestion of a reader signing himself "W.H." Under this obviously impossible scheme three-speed and clutch models would be fractionally cheaper than direct belt T.T. machines with the same power unit. Our correspondent has also a good word to say for the small country garages in preference to the larger town and city shops.

"XF 1550" complains that makers of accessories often do not advertise the prices of their goods, and consequently the buyer sometimes pays considerably more than the actual retail price.

BOOKS AND MAPS FOR MOTOR CYCLISTS

Issued in conjunction with *The Motor Cycle*.

	Price net.	Book post.
"HINTS AND TIPS FOR MOTOR CYCLISTS." Containing over 400 useful "wrinkles" and helpful hints in regard to motor cycles. Seventh Edition	2/-	2/3
"TRACING MOTOR CYCLE TROUBLES." A system for tracing motor cycle faults and of remedying them when found. Fourth Edition ..	2/-	2/3

100 MILES PER HOUR ACHIEVED!

A Coveted Record. Crop of New Figures Set Up. Five Minute Champions

100 m.p.h. for the first time on a motor cycle in this country. D. H. Davidson snapped at his highest speed.

LAST week, for the first time on record in this country, a speed of 100 m.p.h. was attained by a motor cyclist. The honour fell to D. H. Davidson, formerly a comparatively unknown rider, who came into prominence as recently as the B.M.C.R.C. meeting on April 16th. His mount was a twin-cylinder Harley-Davidson, the V type engine, to all outward appearances, being of standard design with inlet over the exhaust.

There were three Harley-Davidson riders on the track, their machines having been especially prepared for track use in the Milwaukee factory. They arrived in this country quite recently, but it was found that the short frames originally adopted for board tracks were not quite suited to the concrete at Brooklands. As a result, the frames were lengthened slightly, which enabled the riders to hold the machines more easily, though it would never do to under-estimate the skill and courage required to sit a machine at such terrific speeds as these engines are capable of attaining.

High Practice Speeds.

All was ready for the attempt on Wednesday last week. When we arrived at the track the two Harley-Davidson riders, C. F. Temple and D. H. Davidson, were busy putting the finishing touches to their machines, testing the chain tension, and so forth. We had been told that the machines in practice had accomplished 104 m.p.h. over the flying kilometre. Due to the fact that only one timekeeper was present the actual attempt had to be postponed till 6 p.m., which was lucky in a way, as it gave opportunity to a goodly number of the A.C.U. One Day Trial competitors to witness the attempt.

In the meantime, that well-known rider, Le Vack, who had evidently got wind of the coveted record being in jeopardy, had got ready his eight-valve Indian machine (now ten years old, and familiarly known as "The Camel"). A Ford van dashed up to the track, rust marks all over the bonnet, and the radiator, from boiling water, showing that no time had been lost on the trip from Town. Aboard the van were Le Vack and the Indian, ready to take a sporting chance with the Harley-Davidson riders in reaching the "100."

LAST WEEK'S SPEEDS AT BROOKLANDS.

WEDNESDAY, APRIL 27th.

H. Le Vack (7-9 Indian) - 98.98 m.p.h.
C. F. Temple (7-9 Harley-Davidson) 97.26 m.p.h.
E. B. Ware (8 Morgan-Jap) 77.67 ,,

THURSDAY, APRIL 28th.

C. F. Temple (7-9 Harley-Davidson) 99.86 m.p.h.
D. H. Davidson (7-9 Harley-Davidson) 100.76 m.p.h.
C. F. Temple (7-9 Harley-Davidson) 88.28 m.p.h. for 5 miles; one lap at 89.10 m.p.h.
D. H. Davidson (7-9 Harley-Davidson) Flying mile 96.26 m.p.h. 10 mile standing start 84.58 m.p.h.
J. F. Newey (2½ New Comet-Climax sc.) 4 hrs. record in class, 161 miles 587 yards—40.33 m.p.h. 5 hours record in class, 200 miles 1,095 yards—40.12 m.p.h. 200 miles—4 hrs. 50 min. 53⅘ secs.—41.12 m.p.h.

FRIDAY, APRIL 29th.

H. Le Vack (7-9 Indian) 106.52 m.p.h.

It was a perfect sunny evening, and there was no wind to disturb carburation. C. F. Temple led the way, and, after a magnificent trial lap, approached the top of the banking for the crucial spurt along the railway straight. Swooping down at an almost incredible speed, he was unlucky in the attempt, as the front chain broke. D. H. Davidson followed in a most thrilling run, steering a magnificent course with never a misfire. His speed was subsequently given as 97.26 m.p.h.—a new record. Le Vack came next on his eight-valve red Indian, which has a shorter wheelbase than the Harley-Davidson, and was geared, he told us, at 3 to 1. He succeeded in clipping ⅖s. off the five-year-old record, giving a speed of 98.98 m.p.h., which time he could not improve upon.

Friendly Rivalry.

Meanwhile, W. H. Wells, learning that Le Vack was so near and yet so far, signalled to him for another attempt; but Le Vack could not respond, as he was thoroughly exhausted by his all-night tuning-up efforts. As it was getting dusk, it was decided to postpone any further attempts until the morrow.

The next day, true to promise, D. H. Davidson set out to achieve what had been found impossible on the previous evening. At 4.30 C. F. Temple made several attempts on his Harley-Davidson to annex the record, and again got aggravatingly close without achieving the task. His best time was 22.4s.=99.86 m.p.h.

It was now Davidson's turn, and on this attempt, in the perfectly wonderful time of 22.2s., he achieved a speed of 100.76 m.p.h., thus winning the Godfrey Cup for the first motor cyclist to accomplish a speed of 100 m.p.h. in this country.

D. H. Davidson and his mechanic with the 7-9 h.p. Harley-Davidson, to which trio fell the honour of accomplishing 100 m.p.h. for the first time in this country

Naturally there had been a good deal of friendly rivalry between Temple and Davidson, as the machines were supposed to be identical in their power output, and it was known that, given favourable conditions, each had the record within his grasp. Mr. Duncan Watson accordingly left them to toss for positions.

Temple made another attempt, but again recorded 99.86 m.p.h. Continuing, however, he made the extraordinary time for one lap of 1m. 49.8s. = 89.10 m.p.h.

Davidson next essayed the Flying Mile, and recorded 37.4s. = 96.26 m.p.h. Not content with his achievement, he then attempted the Ten Miles Standing Start Record, which he annexed with the greatest ease, the time recorded by Messrs. Ebblewhite and Reynolds being 7m. 5.6s. = 84.58 m.p.h.

Davidson's machine had Kempshall tyres, K.L.G. plugs, and Coventry chains. Temple had similar equipment excepting that the tyres were Hutchinsons.

77½ m.p.h. on a Morgan.

On Wednesday evening E. B. Ware captured the kilometre record for passenger motor cycles, using a Morgan Runabout with J.A.P. overhead valve water-cooled engine. In this he had no difficulty—indeed we had unofficially timed him in the afternoon to exceed 80 m.p.h. for a lap, so that his time over the kilometre of 28.8s. = 77.67 m.p.h. was not the best he could do by any means. As a matter of fact his engine misfired when half the course had been covered, shooting sheets of flame out of the exhaust pipes. From our observation his speed at the start must have been in excess of 85 m.p.h. Ware can be counted upon to improve his speed should his figures be challenged by any other racing man.

The Buzzing of a Gnat.

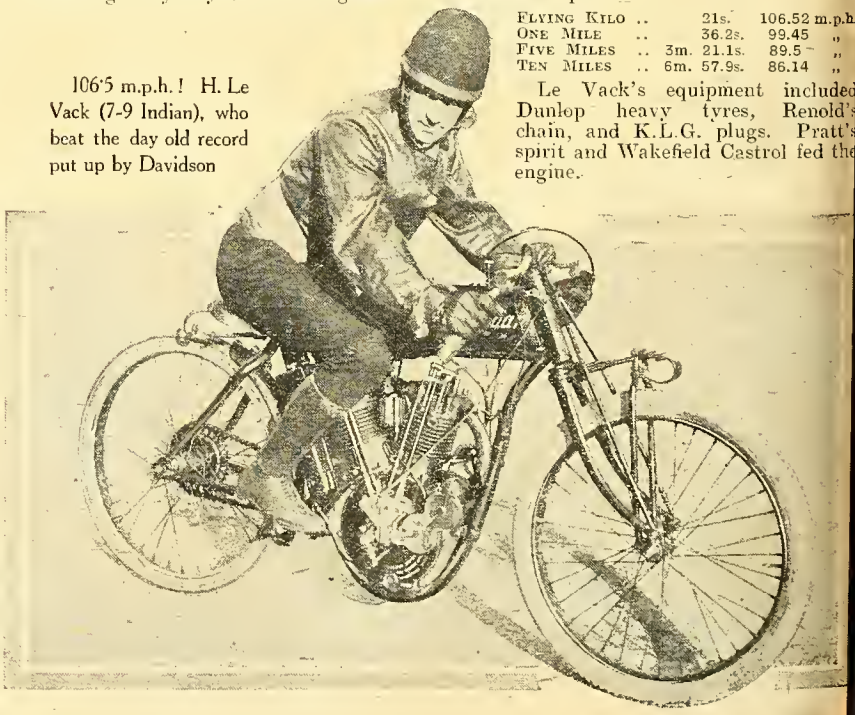
For hours during Thursday, while the majority of those present at Brooklands were speculating as to whether a speed of 100 m.p.h. would be attained, there was in the air a sound resembling the buzzing of a gnat. It was in everyone's ear, and the sight of a little sidecar machine bustling lap after lap round the track brought forth questions as to who, and what, it was. It proved to be J. F. Newey on a single cylinder two-stroke New Comet with a Climax engine, and its consistent running was something at which to marvel. After four weary hours he got inside record and then the interest started. Only very occasionally did he stop, and his willing engine went on averaging over 40 m.p.h. with a sidecar, always apparently ready for the usual spurt along the railway straight. The new records set up were as follows:

4 Hours ..	161 miles	587 yards	40.33 m.p.h.
5 Hours ..	200 „	1,095 „	40.12 „
200 Miles ..	4 hr. 59 min. 5⅘ sec.		41.12 „

The capacity of the Climax engine is 293 c.c., the bore and stroke being 70 mm. and 76 mm. respectively. The gear ratio was 4⅞ to 1.

Newey's choice of equipment included Palmer tyres, Dunlop belt, K.L.G. plug, and Amac carburetter, while Pratt's spirit and Vacuum oil were used.

On Friday Le Vack again brought out his eight-valve Indian and succeeded in beating Davidson's time, covering the kilometre in 21s., or 106.5 m.p.h.



The flying kilometre record in Class E for solo machines not exceeding 1,000 c.c. was successfully attempted, this distance being covered in 21s., which constitutes a speed of 106.52 m.p.h.

A successful attempt at the one mile record was then made: eleventh-hour adjustment of the tappets, however, might have been the reason for the reduction in speed, which worked out at 99.45 m.p.h.

Flying Kilo ..		21s.	106.52 m.p.h.
One Mile ..		36.2s.	99.45 „
Five Miles ..	3m.	21.1s.	89.5 „
Ten Miles ..	6m.	57.9s.	86.14 „

Le Vack's equipment included Dunlop heavy tyres, Renold's chain, and K.L.G. plugs. Pratt's spirit and Wakefield Castrol fed the engine.

106·5 m.p.h.! H. Le Vack (7-9 Indian), who beat the day old record put up by Davidson

QUESTIONS AND REPLIES

A selection of questions of general interest received from readers and our replies thereto All questions should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, London, E.C.4, and whether intended for publication or not must be accompanied by a 2d. stamped addressed envelope for reply. Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects

GEAR BOX LUBRICATION.

(1.) Is engine oil or grease required for the countershaft gears of a 1918 3½ h.p. Rover, and how often? (2.) Does the clutch oil itself from the gear box, or does it need special lubricating? I cannot find any oil cup. (3.) Does the silent chain from the engine to the countershaft oil itself, or must I take off the aluminium casing and oil it occasionally?—C.A.P.

(1.) Thick engine oil is suitable for the gear box and it should be renewed every 500 to 800 miles. (2.) The clutch does not require any lubrication. (3.) It is advisable to oil the chain separately from time to time.

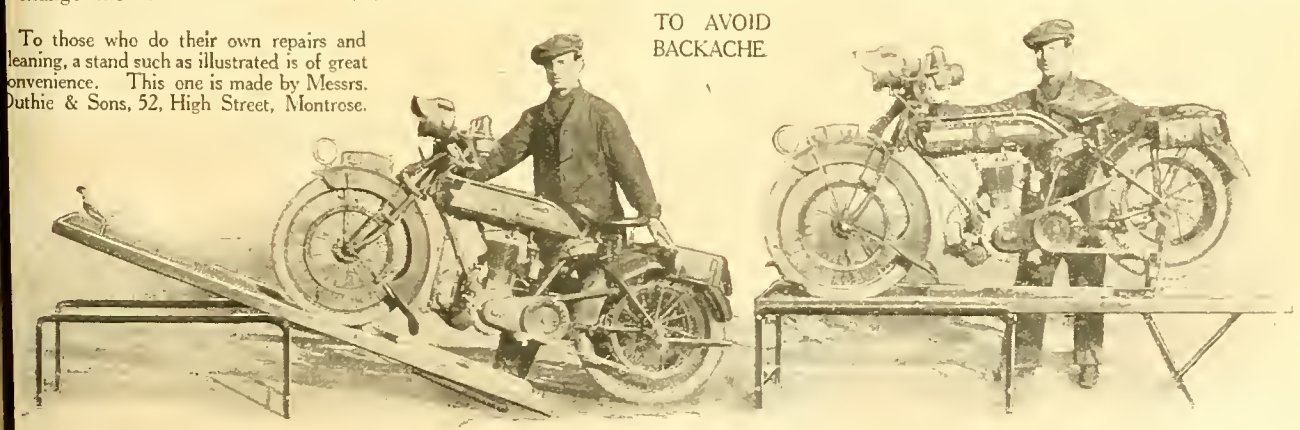
STARVED CARBURETTER.

(1.) I own a "Big Four" Norton, which runs very well and has ample power. I experience the following trouble, however: On a straight road and with a cool engine I want to indulge in a speed burst. For the first two hundred yards, with full throttle, the machine goes very well. Suddenly it stops, and I am obliged to shut off the air, and after a few seconds I am able to repeat the speed burst, and immediately the trouble happens again, and so on. I thought at first it was caused by pre-ignition, but the engine was certainly not overheated, and, moreover, I have changed the plug. The symptoms are like starved carburetter or back-firing. I have dismantled the carburetter, and found some explosions had occurred in it, as it was burnt inside the air intake pipe. Have I to vary the spark timing or to change the level of the float? (2.) I can give full air with half throttle. Is it all right? (3.) I am unable to start the engine with the pilot on the "On" position. In fact, I have always to prime the engine to get a good start even when warm. (4.) What is the correct valve timing? (5.) I used Prices' summer grade oil throughout the winter. Do you think it was too thick? (Our winter is milder than yours.)—J.U. (Portugal).

(1.) In order to get maximum speed, you should, of course, fully advance the ignition. Probably the cause of the trouble is due to the carburetter being starved, as otherwise you would be more likely to get explosions in the silencer if it were an ignition fault. You might try the effect of slightly raising the petrol level; also make quite sure that the petrol flows freely from the tank, as it is quite possible that the starving results from an air lock in the tank itself, due to the filler cap being too tight a fit. Also clean any filters in the petrol pipe or carburetter unions. (2.) With this carburetter it is usually possible to give full air on half-throttle. (3.) Usually it is unnecessary to prime this engine when warm, although it usually helps matters when starting from cold. (4.) Time the valves by the following method: Rotate the engine until the piston is at the top of its stroke, and insert the cam wheels and rockers so that the exhaust valve is just closing and the inlet just about to open. Rotate the engine one complete revolution (forward), set the magneto with the contact breaker points just about to separate, and connect the driving chain. (5.) The oil is rather thick for winter use, and might interfere with starting.

OIL-PUMP DIFFICULTIES.

Would you kindly tell me what is the general principle of the Scott oil-pump? Mine does not seem to function until the engine has been running some time.—G.B.T.J.



You will find a complete description with illustrations in the makers' handbook. The working of the hand pump should be the same, whether the engine is running or not; but if your machine is one of the 1919 or 1920 models, with separate lubricators to each crank case, it is not essential that you use the hand pump, since once the engine is running, crank case suction will induce a supply of oil automatically, and the amount of this may be regulated by the sight feed lubricators. It should be remembered that the oil pipes only communicate with the crank cases at definite periods.

TUNING A TWO-STROKE.

My machine (a 1920 two-stroke) is entered for a hill-climb. (1.) The piston has two rings, both at the top. The top ring is a deep one, about $\frac{5}{16}$in. deep, and the lower one about $\frac{1}{8}$in. deep. Do you think it would be any advantage to remove one of the rings for this event? If so, which one would you advise me to remove? (2.) At present I run on ordinary motor cycle oil, and get excellent results. Do you think it would be advisable to run on castor oil, and would the latter give better results? —F.W.

(1.) Do not remove either of the rings. (2.) It would be advisable to retain the oil which you find to be satisfactory. Pure castor oil is not suitable for motor cycle lubrication.

TO AVOID BACKACHE

To those who do their own repairs and cleaning, a stand such as illustrated is of great convenience. This one is made by Messrs. Duthie & Sons, 52, High Street, Montrose.

GEAR CHANGING METHODS.

Which is the correct method of changing gear up and down on the two following lightweight motor cycles: (1.) 2¼ h.p., two-speed, two-stroke Triumph? (2.) 2½ h.p., two-speed, two-stroke Clyno? —K.P.

In both the machines you mention the method of gear changing is the same. When changing up lift the compression release while moving the lever from one position to the other. When changing down there is no need to lift the compression release at all, merely throttle down and change gear quickly. On the Clyno you may change gear by using the clutch instead of releasing the compression, only do not allow the engine to race unnecessarily.

READERS' REPLIES.

DOUGLAS LUBRICATION ADJUSTMENT

We notice in your issue of the 14th ult., in replying to "D.H.S.," a reference to the adjusting of the oil supply from the pump to the crank case on his 4 h.p. Douglas. There is an adjustment provided on the by-pass, which means simply freeing the locking nut and unscrewing the main screw to curtail the consumption, and *vice versa* for giving more oil. This screw simply regulates the tension on the spring that governs the by-pass valve. By screwing inwards, greater pressure is placed upon the valve and less oil returns to the sump, while, by weakening the spring, more oil is returned to the sump and less delivered to the big end trays and front cylinder. —DOUGLAS MOTORS, LTD.

TWO-STROKE HINTS.

I notice that a reader asked for the reason of blow-back in carburetter. I have a machine fitted with C.A.V. magneto also, and had the same trouble, which I found was due to the fibre roller on contact breaker sticking up; on fitting a new roller the trouble disappeared. I find that the roller wears the spring, making an indentation into which the roller sticks, and a new, unworn roller clears it, although a new spring must ultimately be fitted. — DONALD MCDOUGALL.

OUTSIDE FLYWHEELS.

On two occasions recently I have read of readers having trouble with their flywheels working loose on two-stroke motor cycles. Here is a tip for what it is worth. Dismount the engine, and file about ⅛in. off the end of the crank case boss. Thoroughly grind the flywheel on to the crankshaft, using coarse and then fine grinding paste of the kind sold for truing up valves. Having ground the faces of the taper to reasonable truth, reassemble the engine, bolt it into the frame, and, having heated the flywheel almost red, screw it home, using a very large spanner and wooden mallet. It sounds rather cavalier treatment for a lightweight, but in my case, although both flywheel and crankshaft were badly scored, it worked like a charm.—LACHLAN MACLEAN.

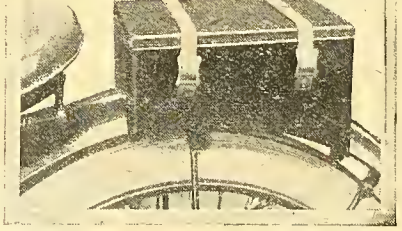
EXPERIENCES WANTED.

"A. B. McL." (Cupar). — Degory, Atmos, or Binks carburetters fitted to Morgan (J.A.P. engine).

Important Dates.

Sat. May 7th—B.M.C.R.C. Open Meeting at Brooklands.
Fri., May 13th, and Sat., May 14th—M.C.C. London-Edinburgh Run.
Sat., May 21st—Western Centre A.C.U. Open Hill Climb.
Sat., May 28th—East Midland Centre A.C.U. Open Hill Climb.
Tues., June 14th—Junior T.T. Race
Thurs. June 16th—Senior T.T. Race.
Sat., June 18th—North-Western Centre A.C.U. Open Speed Trials.
Sat., June 25th—M.C.C. Inter-team Trial for "The Motor Cycle" Cup
Fri., July 1st, and Sat., July 2nd—Arbuthnot Trophy Trial.
Sat., July 2nd—Bournemouth M.C.C. Open Reliability Trial.
Thurs., July 7th—Essex County and Southend A.C. and Essex M.C. Joint Open Speed Trials.
Sat., July 9th—St. Andrews Speed Trials
Sat., July 9th—Cardiff M.C.C. and associated clubs Open Hill Climb.
Mon., July 11th, to Sat., July 16th—Scottish Six Days' Trial.
Sat., July 16th—Ilkley M.C. and L.C.C. Open Reliability Trial.
Sat., July 23rd—East Midland Centre A.C.U. Open Speed Trials.
Sun., July 24th—Motor Cycle Grand Prix Race in France.
Sat., July 30th—Newcastle and District M.C. Open Speed Trials.
Mon., Aug. 1st, to Sat., Aug. 6th—International Six Days Trial in Switzerland.
Sat., Aug. 6th—North Wales M.C.C. Open Reliability Trial.
Mon., Aug. 29th, to Sat., Sept 3rd—A.C.U. Six Days Trial.
Sat., Sept. 17th—Grand Prix Race for Cycle Cars.

RECOMMENDED ROUTES.



COLCHESTER TO KIMBOLTON.—R.E.F.

Colchester, Halstead, Haverhill, Linton, Cambridge, Caxton Gibbet, St. Neots, Kimbolton.

HATFIELD TO BRIGHTON.—H.W.G.

Hatfield, St. Albans, Radlett, Elstree, Bushey Heath, Harrow and Wealdstone Station, Sudbury, Ealing Common, Kew Bridge Station, Kew Bridge, Kew, Richmond, Petersham, Kingston-on-Thames, Tolworth, Ewell, Burgh Heath, Reigate, Woodhatch, Povey Cross, Lowfield Heath, Crawley, Handcross, Bolney, Hickstead, Albourne, Piecombe, Pangdean, Patcham, Brighton. Approximately 78 miles.

DISCARDING THE CARRIER.

Roomy metal toolboxes are coming into vogue, replacing the two small ones carried pannier fashion. This one is now fitted to the new Douglas sports model.

SPARKLETS

British Success in Holland.

At a race meeting held at Duindigt, Holland, on the 17th of April, the first prize (a gold medal) was won by a 3 h.p. Royal Ruby.

Over 100 m.p.h.

When D. H. Davidson, riding a twin Harley-Davidson at Brooklands last week, exceeded 100 m.p.h. for the first time in this country, his machine had K.L.G. plugs, Coventry chains, and Kempshall tyres.

Successful Magnetos.

The following successes have been gained by motor cycles fitted with E.I.C. magnetos: In the Victory Cup Trial, the Victory Cup, seventeen gold medals, and eleven silver medals. In the London-Land's End Trial, the Jarrott Cup, the Lister Trophy, fifteen gold medals, and three silver medals.

British Success in Italy.

A report reaches us that in the Circuito del Tevere (the first of a series of races for the Italian championship) two 2¾ h.p. Douglas machines were first and second in the 350 c.c. class. The riders were G. Cocchi and D. Gambini respectively, and the distance covered was 172 miles.

Price Reductions.

The standard 1921 Wooler S.T.T. model has been reduced to 85 guineas, the touring model with solid aluminium footboards will be 30s. extra, and the Brooklands model 90 guineas.

The New Rover Cycle Co. announce that their new prices will be as follows: 3½ h.p. T.T. model, fixed gear, £90, with hand-controlled Philipson pulley £100; 3½ h.p. single-cylinder, three-speed countershaft gear, chain drive, £115; 5-6 h.p. twin-cylinder, £130; 3½ h.p. single-cylinder sidecar outfit, £152 10s.; 5-6 h.p. sidecar outfit, £167 10s.; Rover coachbuilt sidecar, £37 10s.

Catalogues Received.

B.S.A. Cycles, Ltd., Small Heath, Birmingham. Spare parts list of the 6 h.p. twin-cylinder B.S.A. motor cycle. A very complete list showing all parts clearly by means of line drawings.

Excelsior Motor Co., Ltd., King's Road, Tyseley, Birmingham. A twelve-page list giving large scale photographs of the various Excelsior models, complete specifications and prices. The solo models appear to be very graceful and of well-balanced proportions.

Norton Motors, Ltd., Bracebridge Street, Birmingham. Well worthy of the famous machines which it describes, the Norton catalogue is well got up and beautifully illustrated, the photographs of the parts being especially clear. One page is filled up with a list of Norton records in small type, performances of which the makers may be justly proud.

So Easy in Cambridge!

We understand that the police are very active in Cambridge, where motor cyclists should traverse the narrow streets at a slow speed.

The Belgian Grand Prix.

Copies of the rules and regulations of the proposed Belgian Grand Prix may be obtained from *The Motor Cycle*, 20, Tudor Street, London, E.C.4.

Welsh Speed Championships.

Fifty mile races are not common in this country, and Welsh motor cyclists will undoubtedly take full advantage of the long-distance event which the Cardiff and District M.C. and C.C.C. is including in the Welsh speed championships to be contested on Pendine Sands on Whit-Monday. There are also two twenty-five mile races for 275 c.c. and 350 c.c. machines, and two sprint events.

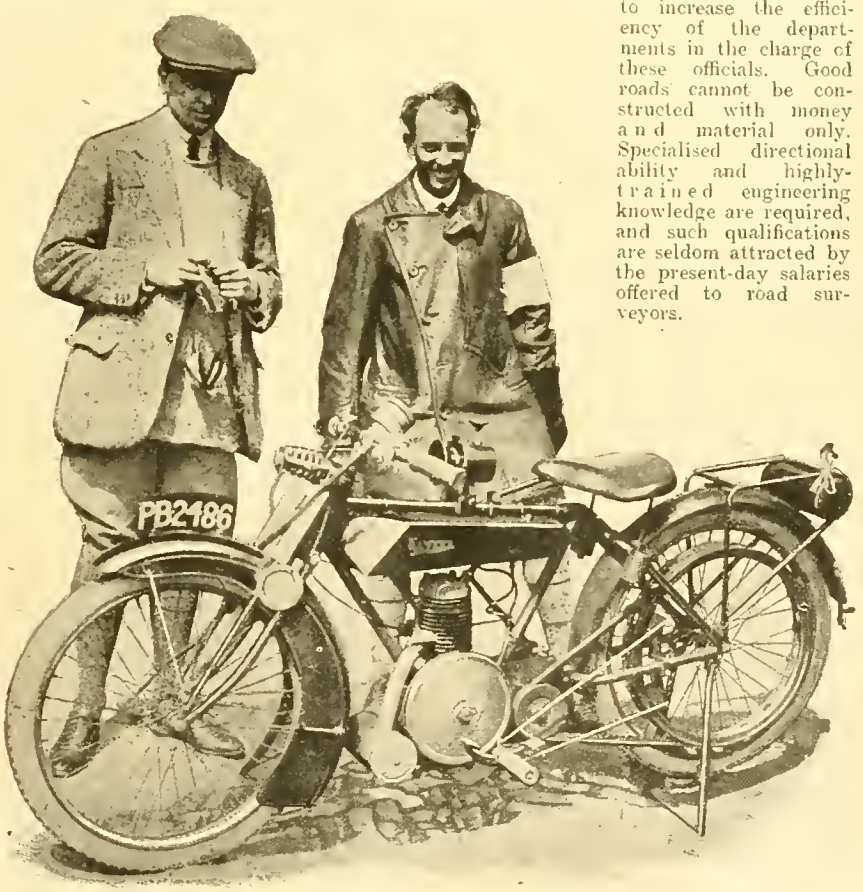
Hill-climbing in Canada.

A hill-climb was recently held by the Toronto M.C. in the Humber Valley. It was described as a "wicked hill," with no semblance of a road surface, and the course consisted of a surface of loose sand. The winning machine used a rear wheel without a tyre but with flanges fitted to . This occasioned several protests.

England v. Holland.

Dutch motor cyclists are doing their best to find a championship team to represent them in the Anglo-Dutch trial, which this year will be held in this country. On June 16th the Limburgsche Motor Club will hold a trial, followed the next day by another organised by the Motor Club Arnhem en Omstreken. The Twentsche Motorryders Vereeniging and the Noord Nederlandsche Motor Club will hold trials on June 18th and 19th respectively.

Knock-out Scottish Hill-climb.



Next Saturday the Edinburgh and District Motor Club is holding an open hill-climb at Bevelaw Hill, near Balerno, by the kind permission of Mr. J. J. Cowan, of Bevelaw Castle. There are to be eight classes—250 c.c., 350 c.c., 560 c.c., and unlimited, "experts barred" and "open" in each. The events are to be run on knock-out lines, with a flying start, which is to be arranged as follows: Competitors will be allowed to start as far back as they like, but there will be three flag marshals at the foot of the hill, spaced at distances of twenty yards apart. If the competitors pass the first marshal level and at the same speed he will drop his flag, but if not the second or third marshal may act as starter. The flag marshals will have the power not to start the competitors if they see that one competitor is trying to manœuvre to start level with the others, but at a higher rate of speed.

The Next Open Hill-climb.

Chatcombe Hill, near Cheltenham, will be the venue on the 21st inst. of the Western Centre A.C.U. open hill-climb. As there are twenty-six classes, it is evident that all are being catered for; and it is therefore unnecessary to tabulate these classes in detail. Entries will be accepted (by the trials secretary, Mr. E. Featherstone, Leckhampton, Cheltenham) at single fee up to the 11th inst., and at double fee for four days after.

Road Engineer Specialists Wanted.

Now that motorists are paying so heavily for the upkeep of roads through greatly increased taxation, the Roads Improvement Association is urging local authorities to improve the status and remuneration of road surveyors, in order to increase the efficiency of the departments in the charge of these officials. Good roads cannot be constructed with money and material only. Specialised directional ability and highly-trained engineering knowledge are required, and such qualifications are seldom attracted by the present-day salaries offered to road surveyors.

THE SIMPLE TWO-STROKE.

Two famous airmen re-enter motor cycle competitions. T. O. M. Sopwith and H. G. Hawker, who rode the new Hawker two-strokes in the "stock machine" class, in last Wednesday's A.C.U. One-day Trial—their début in open competition.

Olympia, 1921.

The 1921 Olympia Motor Cycle Exhibition will open on Monday, November 28th.

Well Done, Stock Machines!

For the stock machines to do better than the rest of the entry in the A.C.U. Trial is a tribute to our manufacturers. Stock machines score 58.8% successes, the others only 34.8%

Pioneer Passes Away.

We regret to record the death of Sir Frank Bowden, Bart., F.R.G.S., founder of the Raleigh Cycle Co. Closely associated with the motor cycle movement in its pioneer days, Sir Frank took a great deal of interest in the world of wheels, and was a keen cyclist, having toured in many little known places with his bicycle.

Freak Hill-climbing.

Held in glorious weather on the 1st inst., the freak hill climb of the Bradford M.C. and L.C.C. on Rosedale Abbey Bank provided some excellent sport for the many spectators and competitors alike. Somewhat of a surprise was caused by A. Champion winning the solo class, by one point, on a 1912 3½ h.p. B.S.A. He also won the cup for the best performance irrespective of class. F. W. Dixon (7-9 Harley-Davidson sc.) and C. P. Wood (3¾ Scott sc.) headed the sidecarists with 118 points each, but the gold medal was awarded to Wood.

Open Hill-climb at Dublin.

An open hill-climbing handicap was held at Killinaein Hill, near Tallaght, on Saturday last. The three events resulted as follows :

SIDECAR CLASS.—Hon. H. Massy (7-9 Harley-Davidson sc.), owes 1s., handicap time 54⅘s.; N. Lepler (7-9 Indian sc.), scratch, 61⅘s.; P. Phillipson (6 A.J.S. sc.), 2s., 84⅘s.

HEAVY SOLO CLASS.—P. McInally (5 Indian), 2s., 35⅘s.; G. Tyson (7-9 Indian), owes 2s., 35⅘s.; C. Johnson (7-9 Harley-Davidson), owes 3s., 37s.

LIGHTWEIGHT CLASS.—R. H. Hill (2¾ Douglas), 2s., 56⅘s.; Dr. T. F. Broderick (2¼ Levis), 4s., 56⅘s.; T. Green (2¼ Enfield), scratch, 59⅘s.

There were fifty entries and thirty-eight competed.

New Models and New Prices.

The B.S.A. chain drive single is now offered with a sporting sidecar, selling at £145. The Ariels have been reduced in price, and are now : 3½ h.p., three-speed, £100; 6-7 h.p., chain-cum-belt, £115; 4½ h.p., chain drive, £110; and 6-7 h.p., chain drive, £125.

In addition to the above, Verus lightweight models are reduced to £99 15s. (2¾ h.p.), £112 (2¾ h.p., sports model), and £80 (2½ h.p., two-stroke); while Martinsyde 6 h.p. sidecar outfits have been reduced to £160.

Brooklands on Saturday.

An exceptionally good entry has been obtained for next Saturday's open meeting of the B.M.C.R.C. at Brooklands; including four cycle cars, there is a total of eighty-two down to compete in the motor cycle races. Almost all the most famous Brooklands men will attend, and the meeting will have an interesting pre-war flavour by the return of the Triumph, Trump-Jap, and Martin racers. Racing will commence at 2 p.m., and the five chief motor cycle events on the programme are : "Junior" and "Senior" open handicaps (where several "Isle of Man machines" will make an appearance), sidecar and cycle car open handicaps, and one two-mile sprint for solo motor cycles not exceeding 500 c.c.

WHITSUNTIDE HOLIDAYS.

Readers who wish to insert miscellaneous advertisements in the issue of "The Motor Cycle" dated 19th May, should note that "copy" must reach the publishers by first post on THURSDAY, 12th May.

Belt Drive and the T.T.

After our correspondence pages had gone to press we received the following letter anent the withdrawal of the Zenith-Bradshaw from the T.T. :

"We have noted with extreme surprise the paragraph on page 519 on the supposed necessity for a more positive drive for the Bradshaw engine.

"Mr. Emerson, who was engaged by us for six months for the purpose of testing all the points of this machine, has, on the completion of his engagement, stated that he entirely disagrees with the report, and we enclose his signed statement to this effect.

"The sole reason for our decision to withdraw from the T.T. is that the testing of this new machine has been so prolonged (in order to make sure of everything) that our production programme has been considerably delayed, and would be further delayed by T.T. preparations.

"We, however, confidently anticipate that these machines will be in the hands of the public before the date of the T.T. race, though not early enough for the necessary tuning up and running in, which many other makers find takes them several months.—ZENITH MOTORS, LTD."

"I have seen the note in *The Motor Cycle* about the belt on the Zenith-Bradshaw not being a positive enough drive for the engine. I entirely disagree with this view.—(Signed) J. EMERSON."

116 T.T. Entrants.

In addition to the list of ninety-two entries for the T.T. races already published in *The Motor Cycle*, a further twenty-four entries were received by the A.C.U. up to Monday last, when the entries closed at ordinary fees. There are now sixty-four senior and fifty-two junior entrants, and the additions include the following :

JUNIOR RACE.—F.N. (England), Ltd. (1); Massey Arran Motor Co. (1); Veloce, Ltd. (3); W. G. Harrison (2¼ Velocette); H. G. Hawker (2¾ Hawker); W. G. Green, Ltd. (2¾ Omega, rider N. Black); E. Longdon (2¾ Coulson); W. Hawarth (2¾ Dot-Jap); F. Boulton (2¾ New Imperial); Wooler Motor Cycles, Ltd. (2).

SENIOR RACE.—New Rover Cycle Co. (3); V. Horsman (3½ Norton); M. H. Edmond (3½ Triumph); G. Sutcliffe (3½ Norton); E. Longden (3½ Coulson); W Atkinson and Son (3½ Sunbeam, rider J. J. Whalley); Scott Motor Cycle Co. (four 3½ Scotts, riders J. W. Moffatt, R. W. Stansfield, C. P. Wood, and H. Langman); Ilkley M.C. and L.C.C. (one rider, G. Clapham); R. J. Braid and C. A. Vandervell (machines unspecified).

RESULTS OF MIDLAND CENTRE A.C.U. OPEN TRIAL.

AS anticipated, only few—twenty, to be exact, and including one sidecar only—of the 130 entrants in the first Midland Centre A.C.U. Open Trial, on the 24th ult., gained premier awards.

Ariel "A" team won the Manufacturers' Team Prize, with the Raleigh and B.S.A. teams a close second and third respectively. Redditch and the M.C. and A.C. No. 1 teams head the list, in the order named, for the Club Team Prize.

Full results follow :

GOLD MEDALS.

G. Lidstone (2¼ James).
A. W. Thrush (2¼ Levis).
E. Mundy (2½ New Hudson).
W. Bell (2¼ New Hudson).
L. E. Clulee (2½ Allon).
A. C. Cope (2¾ O.K.).
M. A. Atkins (2¾ Hobart).
G. M. Townsend (3½ P. and M.).
G. J. Baragwanath (3½ Sunbeam).
J. G. Arford (3½ Hoskison).
L. Stocks (6-7 Ariel sc.).
J. H. Walker (4¼ B.S.A.).
L. L. Scaley (4¼ B.S.A.).
F. A. Longman (3½ Ariel).
A. G. Fenn (5-6 Raleigh).
H. Poole (4¼ B.S.A.).
T. F. Blumfield (6 Ariel).
F. W. Viles (5-6 Raleigh).
H. F. S. Morgan (8 Morgan).
W. A. Ridley (10 New Hudson)

SILVER MEDALS.

C. H. Hanwell (2¼ Cedos).
W. A. R. Bown (2½ Bown-Villiers).
R. Cooper (2½ Allon).
C. Hollyoak (2½ Federal).
J. W. Parkes (2½ Sun V.T.S.).
A. H. Johnson (2½ Allon).
G. E. Cuffe (2½ Metro-Tyler).

A. B. Clark (2¾ Coulson B).
E. Hawks (2¾ Excelsior).
F. G. Morgan (2¾ Cotton).
E. J. Weal (4 Triumph).
J. E. J. Whitaker (4¼ B.S.A.).
K. Holden (5-6 Raleigh).
S. Hall (3½ Sunbeam).
C. W. Lewis (3½ Beardmore).
W. E. Smith (3½ Norton).
V. Hawkins (2½ Excelsior).
T. Peck (4½ Ariel).
H. Greaves (3½ Beardmore).
T. Doyle (3½ Lea-Francis).
L. A. Bees (3½ Beardmore).
M. F. Powney (4 Triumph).
A. G. Cocks (3½ Beardmore).
A. Rollason (3½ Ariel).
R. W. Duke (4 Triumph).
W. B. Gibb (3½ Douglas).
W. T. Woodcock (3½ Ariel sc.).
W. R. Brown (3½ Sunbeam sc.).
F. W. Giles (7 A.J.S. sc.).
T. G. Amphlett (4½ James sc.).
J. W. Meredith (10 T.B.).

BRONZE MEDALS.

R. Mundy (2¼ Cedos).
P. J. Wilkins (2½ New Imperial).
R. C. Bennett (2½ Federation).
B. H. Norris (2½ Sun V.T.S.).
F. Haliam (2¾ Marloe).
L. Tonks (2¾ New Imperial).
G. W. Shepherd (2¾ Beaumont).
H. V. Collins (2¾ Marloe).
H. C. Jennings (3½ James).
C. N. Green (4 Triumph).
B. L. Bird (4¼ B.S.A.).
A. E. Taylor (6 B.S.A.).
F. A. Watson (3½ Sunbeam).
E. Williams (7 A.J.S. sc.).
H. Green (4 Triumph sc.).
N. Rycroft (4 Triumph sc.).
W. A. Carr (8 Morgan).

MANUFACTURERS' TEAMS.

1. Ariel "A."—Stocks (gold medal), Blumfield (gold), Peck (silver); total marks lost, 6.
2. Raleigh.—Viles (gold medal), Fenn (gold), Holden (silver); total marks lost, 18.
3. B.S.A.—Bird (bronze medal), Walker (gold), Sealey (gold); total marks lost, 22.

CLUB TEAMS.

1. Redditch.—Smith (silver medal), Poole (gold), Sealey (gold); total marks lost, 2.
2. M.C. and A.C. (1).—Peck (silver), Stocks (gold), Blumfield (gold); total marks lost, 6.
3. South Birmingham.—Cooper (silver), Johnson (silver), Clulee (gold); total marks lost, 29.

HIGH SPEEDS AT GARSHAKE HILL.

Glasgow Western M.C.C Hill-climb on Saturday—New Records by A. H. Alexander.

A close shave: A. H. Alexander trims the grass at the top of Garshake Hill on his 3½ h.p. Douglas.

UNDER ideal conditions the Glasgow Western M.C.C. held its first hill-climb of the year. The very large entry of 172 had been received, and as the surface of the hill was in good condition some very fine riding was seen. Much disappointment was evident when H. R. Davies, the A.J.S. expert, was unable to be present; but the excellent riding of the Alexanders and Geo. Grinton roused the large number of spectators to a high pitch of enthusiasm.

Three Thousand Spectators.

Fully 3,000 spectators were present, and the event was the most successful held in the West of Scotland. The organisation was very good, and the classes were run off promptly and without undue delay between the events.

The sidecar and light car classes were run off first. In the expert barred class nothing very startling was seen, but the experts provided some very fast climbs. Geo. Grinton (7-9 Harley-Davidson sc.) made a very speedy ascent and D. S. Alexander (7-9 Indian sc.) was not much slower. A. H. Alexander (3½ Douglas sc.) was also fast. In the time classes the same riders were well to the fore. The light car class provided nothing exceptional in the way of speed, and Claude Duncan (G.P. Morgan) was easily fastest.

W. G. Smith (2¾ Green) put up a very fine climb in the 350 c.c. solo class, as did D. S. Alexander (2¾ Douglas) in Class 2. Small (on a 3½ Norton) and A. J. C. Lindsay (3½ Rover) made good climbs. In the general class not exceeding 600 c.c. on formula, A. H. Alexander (3½ Douglas) made an excellent climb, and put up the new record of 26⅗s. for the hill. This, however, did not survive the afternoon, as D. S. Alexander (7-9 Indian) clipped 1⅗s. off this time in one of the later classes, his time being 25⅕s.

Record for the Hill.

He even beat this in the last class of the day, putting up the phenomenal time of 24s., clipping a full 3s. off the previous record established by H. R. Davies (2¾ A.J.S.) in the same club's hill-climb last October.

The new G.R.I. made its first appearance in competition in this event, and attracted much attention.

Electric timing was used throughout, the method of working being a most ingenious arrangement constructed by Mr. Alex. Graham, a prominent member of the committee, which worked perfectly throughout the competition. The club's slide rule expert was stationed at the finishing line, and results were obtainable immediately after the rider crossed the tape.

The officials all worked with right good will, and every credit is due to them.

Full Results.

SOLO (not exceeding 350 c.c.): Expert barred.—Formula: 1, J. G. Hamilton (2¾ Verus), 33.3 m.p.h.; 2, H. G. Deas (2¾ Royal Ruby), 32 m.p.h.

SOLO (not exceeding 350 c.c.): General.—Formula: 1, D. S. Alexander (2¾ Douglas), 40.4 m.p.h.; 2, W. G. Smith (2¾ Green), 36.6 m.p.h.

SOLO (not exceeding 350 c.c.): Expert barred.—Time: 1, G. Hope Wilson (2¾ Douglas), 36.9 m.p.h.; 2, H. G. Deas (2¾ Royal Ruby), 35.3 m.p.h.

SOLO (not exceeding 350 c.c.): General.—Time: 1, W. G. Smith (2¾ Green), 39.4 m.p.h.; 2, D. S. Alexander (2¾ Douglas), 38 m.p.h.

SOLO (not exceeding 600 c.c.): Expert barred.—Formula: 1, John Robertson (3 A.B.C.), 40.6 m.p.h.; 2, E. A. Small (3½ Norton), 43.7 m.p.h.

SOLO (not exceeding 600 c.c.): General.—Formula: 1, A. H. Alexander (3½ Douglas), 48.9 m.p.h.; 2, E. A. Small (3½ Norton), 42.5 m.p.h.

SOLO (not exceeding 600 c.c.): Expert barred.—Time: 1, A. J. C. Lindsay (3½ Rover), 43.95 m.p.h.; 2, E. A. Small (3½ Norton), 42.5 m.p.h.

SOLO (not exceeding 600 c.c.): General.—Time: 1, A. H. Alexander (3½ Douglas), 47.1 m.p.h.; 2, J. W. Walker (3½ Norton), 45.2 m.p.h.

SOLO (unlimited): Expert barred.—Formula: 1, E. A. Small (3½ Norton), 42.5 m.p.h.; 2, G. Hope Wilson (2¾ Douglas), 36.5 m.p.h.

SOLO (unlimited): General.—Formula: 1, J. W. Walker (3½ Norton), 47.8 m.p.h.; 2, A. H. Alexander (3½ Douglas), 48.2 m.p.h.

SOLO (unlimited): Expert barred.—Time: 1, G. Hope Wilson (7 Indian), 44.9 m.p.h.; 2, A. J. C. Lindsay (3½ Rover), 43.3 m.p.h.

SOLO (unlimited): General.—Time: 1, D. S. Alexander (7 Indian), 54.2 m.p.h.; 2, G. Grinton (7 Harley), 49.7 m.p.h.

SIDECARS (unlimited): Expert barred.—Formula: 1, M. Simons (3½ Triumph), 25.6 m.p.h.; 2, T. MacKenzie (5-6 James), 25.7 m.p.h.

SIDECARS (unlimited): General.—Formula: 1, A. H. Alexander (3½ Douglas), 37.2 m.p.h.; 2, G. Grinton (7 Harley), 41.7 m.p.h.

SIDECARS (unlimited): Expert barred.—Time: 1, G. Hope Wilson (7 Indian), 32.8 m.p.h.; 2, M. Fraser (8 Enfield), 32.3 m.p.h.

SIDECARS (unlimited): General.—Time: 1, G. Grinton (7 Harley), 42.8 m.p.h.; 2, D. S. Alexander (7 Indian), 42.2 m.p.h.

LIGHT CARS: General.—Formula: 1, Claude Duncan (Morgan), 28.7 m.p.h.; 2, Edgar Gearing (Deemster), 23.9 m.p.h.

LIGHT CARS: General.—Time: 1, Claude Duncan (Morgan), 28.5 m.p.h.; 2, Edgar Gearing (Deemster), 25.5 m.p.h.

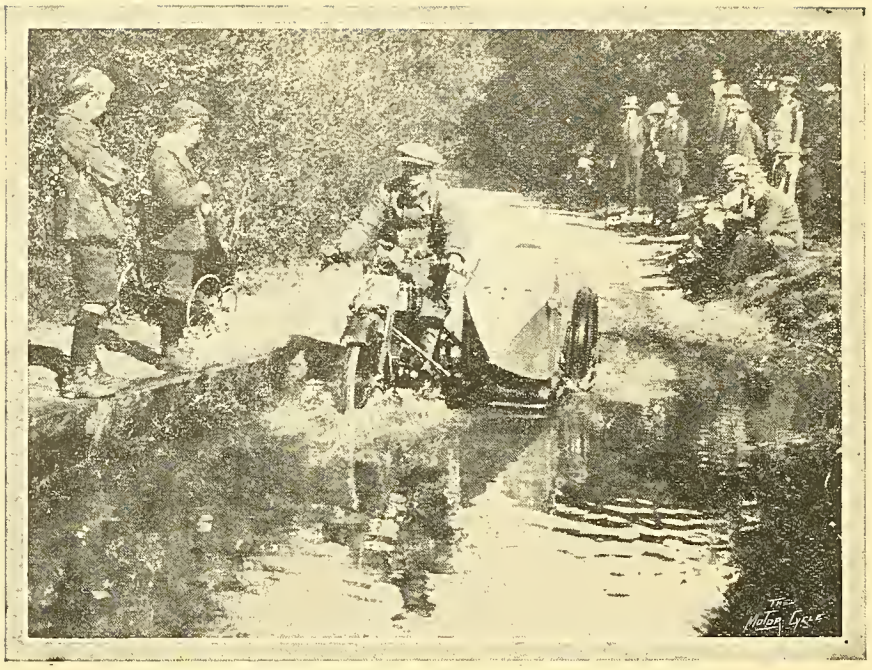
SPECIAL PRIZES.

FASTEST TIME (private owner, club member).—J. W. Walker (3½ Norton), 27⅖s.

GRAHAM HAYES MEDAL (best performance on formula, private owner, club member).—J. W. Walker (3½ Norton).

BEST PERFORMANCE (novice, on formula).—John Robertson (3 A.B.C.).

A TRIAL WITHOUT HILLS.



Watersplashes the Sole Obstacles in Midland Centre A.C.U. Team Trial.

DESPITE the fact that there were neither hairpin corners nor hills in last Saturday's A.C.U. Midland centre team trial only twenty-eight riders of forty-eight starters survived four non-stop circuits of a twenty-two and a half miles course.

Such a result must not be taken as an indication of the unreliability of motor cycles, for the bulk of the failures occurred in one or other of the two bad water-splashes which were encountered, and all went to show how the best machines could be eliminated if there was the slightest error of judgment or lack of restraint on the rider's part.

Seven Teams Compete.

The start from the Stonebridge Hotel on the Coventry-Birmingham road was made at two o'clock; perfect weather condi-

When speed is needed, T. C. de la Hay (3½ Sunbeam sc.) can win a T.T., but at Canley, on Saturday last, he wisely elected to enter the water "dead slow." The passenger also considered discretion the better part of valour!

tions prevailing. Seven teams (of seven riders) were present, and only one team started without its full number of men.

Four circuits of the course, which touched Coventry, Canley watersplashes, Kenilworth, Kenilworth ford, and Berkswell had to be completed at an average speed of from 17 to 20 m.p.h., without stopping, and the best five performances in each team were to count for the award.

Many failed at Kenilworth, where the large crowd of spectators was amused by a number of ducks which did not appear to be the least bit perturbed by the passing of the competitors, until one was unlucky and quacked its last protest under the front wheel of a sidecar outfit. Of the performances generally it is scarcely possible to say much in praise, or otherwise, for it is obvious from the results that those who completed the four circuits rode consistently. Results:

1.—COVENTRY AND WARWICKSHIRE M.C.
Brandish (5-6 Rover).
Edmond (4 Triumph sc.).
Atkin (5-6 Rover).
Astley (5-6 Rover sc.).
Wright (4½ Humber sc.).
Ravenhill (3½ Rover sc.).
*Ewens (7-9 Rudge).

2.—REDDITCH AND DISTRICT M.C.C.
Taylor (6-7 B.S.A.).
Bird (4¼ B.S.A.).
Cave (8 G.N.).
Poole (4¼ B.S.A. sc.).
Surman (4¼ B.S.A.).
*Swiffen (4 Norton sc.).
*Smith (3½ Norton).

3.—WOLVERHAMPTON M.C.C.

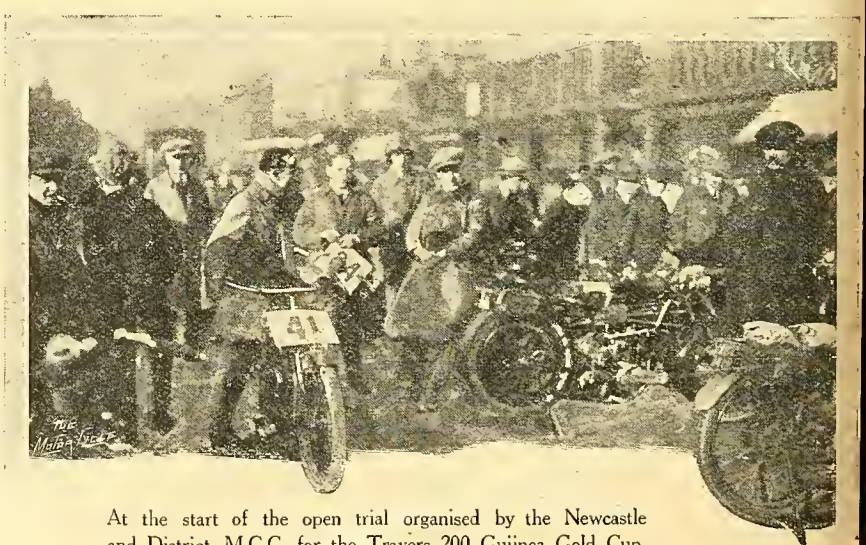
*Walker (4¼ B.S.A. sc.).
*Clulee (2½ Allon).
*Failed to complete course.

OPEN TRIAL IN NORTH OF ENGLAND.



74 Riders Compete for Gold Challenge Trophy.

THE Newcastle and District Motor Club was favoured with splendid weather on Saturday, when the club successfully organised the first open event which the A.C.U. has ever authorised the North-eastern Automobile Association to hold.

In the solo class, out of an entry of forty-seven competitors, no fewer than forty-five weighed in at the start, whilst from thirty-one entrants in the sidecar and three-wheeler class there were only three non-starters; and all but one of the thirteen entrants in the cycle car and light car class failed to face the starter.

The chief attraction, of course, was the 200 Guinea Travers Challenge Trophy, with its accompanying prize of £50; and, in addition, there were gold medals for all competitors who gained full marks, with the well-known formula $\frac{C \times T}{W}$ to be brought into consideration at the climbing of Killhope, in the event of the club being otherwise unable to find an absolute winner.

The competitors from other centres included H. R. Harveyson (4 Indian), R. W. Loughton (2¾ Douglas), B. Bourke

At the start of the open trial organised by the Newcastle and District M.C.C. for the Travers 200 Guinea Gold Cup.

Open Trial in North of England.—

(2½ New Hudson), J. J. A. Dias, D. Robb, Hugh Gibson (8 Royal Ruby sc.), Mrs. D. Bell (7 A.J.S. sc.), the only lady competitor), G. Denley (2¼ Velocette), R. B. Clark (2¾ Coulson B), B. Kershaw (2¾ Verus), G. Kuhn (2¾ Verus), F. J. Ellis (8 Matchless sc.), G. Nott (8 Matchless sc.), and L. Newey (6 Ariel sc.).

The route selected would have been tricky in damp weather, but on Saturday was by no means difficult to the majority of the competitors, with the result that when the sheets are examined it will probably be found that the club will have to provide a good number of gold medals.

The outward journey was *via* Shotley Bridge, Edmundbyers, Middleton, Allenheads, Alston, and Allendale—a distance of over ninety miles—and the return journey was *via* Middleton, Stanhope, Lanchester, Annfield Plain, and Whickham—a distance of over seventy-eight miles.

There was a surprise just outside Allendale, for after climbing Lonkley Bank the competitors found that the watersplash, which is ordinarily only a few inches deep, and is used by farmers to water their cattle, had been dammed overnight.

There was another watersplash at Softerley, not too deep, but with a very treacherous mossy bottom, and in this some of the competitors slid for yards.

Messrs. A. V. Ebblewhite, T. Rutherford, and Q. A. Nicol, M.B.E., represented the Auto-Cycle Union. Mr. W. Baxter was the judge, and Mr. H. Gillies Wicks, the secretary of the meeting.

FROM LONDON TO HOLYHEAD.

Ealing and District M.C.C. Open Twenty-four Hour Trial.

THE Ealing and District M.C.C. carried out its second annual open event from London to Holyhead on Saturday last for the Maudes Challenge Shield, presented by Mr. George Pettyt.

For such a strenuous trial the weather conditions were ideal, and the club officials are to be heartily congratulated on their selection of such a sporting course, and the excellent way in which the whole trial was carried through.

The route selected passed through some of the most picturesque scenery in Wales, and included such well-known hills as Stay-a-Little, Bwlch-y-Groes, a very tricky observed hill near Rhayader, Dinas Mawddwy, and Blaenau Festiniog. Many of our readers will remember this route, which was followed in some of the early Six Days Trials in the days when fixed gears predominated.

Out of an entry of fifty-five, ten failed to face the starter at the Berkeley Arms Hotel, Cranford Bridge, and the first competitor, W. G. Boyer (5 Rover), was despatched by the club president, Dr. A. M. Low, at twelve o'clock midnight, others following at one-minute intervals. The route was through Reading, Wantage, Cirencester, and Gloucester.

Through the Night.

The first check was at Ann's Garage, Faringdon (3 a.m.), where hot coffee and sandwiches, in addition to petrol, were taken in by the dusty competitors. D. R. Dowson (2¾ Hawker) was a late arrival, having been delayed with lamp troubles.

The second check, in charge of W. B. Gibb, was at Gloucester. Coffee and sandwiches were provided by that well known rider; they were most welcome to the competitors.

Leaving Gloucester the roads were in much better condition, and the riders indulged in some fast riding. Just after Ross, S. A. Bevington (6 A.J.S. sc.), in avoiding a non-competitor, swerved, and hit the bank, damaging his front forks and twisting his frame; however, he arrived at the finish, feeling none the worse for his experience.

Breakfast was taken at the Hop Pole Hotel, Hereford, 127 miles from the start.

The first observed hill was just after leaving Rhayader, and E. W. Stevenson (3½ Brough) was the only failure, he having a puncture in the non-stop section.

The fastest ascents were made by E. V. Spencer (4 Omega) and S. T. Tessier (8 Bat sc.), while the Raleigh (ridden by E. Foster) made the climb steadily and evidently.

A number of watersplashes between the first observed hill and the secret checks caused several of the riders some difficulty in keeping up to schedule.

The second observed hill was Stay-a-Little. Brandon and Battley (on Triumphs) were particularly good; C. H. Hanwell (2½ Cedos) and P. Cunningham (3½ P. and M.), good; E. Foster (5-6 Raleigh) stopped; McDonald (7-9 Indian sc.), good; A. K. Smith (7-9 Harley-Davidson sc.), good; W. S. Jameson (3½ Sunbeam), very good; E. W. Spencer (4 Omega), very good; and T. O. M. Sopwith, C.B.E. (2¾ Hawker), was slow.

The third observed hill, Bwlch-y-Groes, was the titbit. Spencer (4 Omega) was again good; Sprosen (2½ Connaught), slow; Knight and Stevenson (3½ Broughs), fast; O'Sullivan (4 Harley-Davidson) failed with clutch slip; S. T. Tessier (8 Bat sc.) made a good climb; H. F. S. Morgan (8 Morgan) and F. S. Spouse (10 T.B.) showed what the three-wheelers could do; I. McDonald (7 Indian sc.) stopped, but started again, and made a fast climb; and H. Reed (8 Dot) also made a good performance.

List of Survivors.

W. G. Boyer (5-6 Rover).
A. G. Battley (4 Triumph).
P. Cunningham (3½ P. and M.).
W. H. Spiller (2¾ Wooler).
W. S. Jameson (3½ Sunbeam).
C. L. Sprosen (2½ Connaught).
J. R. H. Knight (3½ Brough).
E. W. Stevenson (3½ Brough).
E. Foster (5-6 Raleigh).
G. W. Shepherd (2¾ Beaumont).
E. V. Spencer (4 Omega).
W. P. Brandon (4 Triumph).
G. E. Cuffe (2½ Metro-Tyler).
J. A. O'Sullivan (4 Harley-Davidson).
A. G. Wall (2¾ Cedos).
T. O. M. Sopwith, C.B.E. (2¾ Hawker).
S. A. Bevington (7 A.J.S. sc.).
A. K. Smith (7-9 Harley-Davidson sc.).
S. T. Tessier (8 Bat sc.).
H. Reed (8 Dot sc.).
F. S. Spouse (10 T.B.).
H. F. S. Morgan (8 Morgan).

Smiles after breakfast. E. Foster (5-6 Raleigh) checking out of Hereford in the early morning.

A TRIAL FOR TEAMS OF PRIVATE OWNERS.

Oxford M.C. Team wins the Premier Award in Surbiton & District M.C.C. Trial.

THE Oxford M.C. riders were the only team to finish intact in last Saturday's team trial for the Maudes Challenge Shield.

It is true that the trial was open to private owners only, but there were many fine drivers among them, and it is hard to say why so many stops were reported.

The course was a thoroughly sporting one, and contained only four hills worthy of the name, while the surfaces were good on the whole. The entry list was an excellent one, and the following clubs competed: The Surbiton and District M.C.C., the holders of the Challenge Shield—the Gipsy Club, the Woolwich, Plumstead, and District M.C.C., the Bucks County M.C.C., the North-west London M.C.C., the Bedford and District M.C.C., the Ealing and District M.C.C., the Brighton and Hove M.C.C., the Wallington and District M.C. and L.C.C., the Herts M.C. and L.C.C., the North London M.C.C., the Public Schools M.C.C., the City and Guilds (engineering) College M.C.C., the Basingstoke M.C.C., the Oxford Motor Club, and the Reigate, Redhill and District M.C.C.

A Shortened Circuit.

The Essex Motor Club team did not start, and the Wallington Club was three men short. Teams were composed of three solo and three sidecar machines.

Started from the Talbot Hotel, Ripley, at 1.30 p.m., by Mr. George Reynolds, the competitors proceeded at half-minute intervals in the direction of Guildford, and were almost immediately afterwards misdirected by an A.A. scout, who sent them direct to Newlands Corner. This made a serious difference, as it shortened the thirty-three and a half mile journey by nine miles, and avoided Bright Street, Guildford.

The course was covered three times; and though it included three of last year's hills, it was quite different. The same route to Guildford, up Bright Street (about 1 in 6), and along the Clandon Road to Newlands Corner was followed. At the bottom of the slope a sharp turn to the right was taken, and then ensued a lovely journey over good roads through some of the most beautiful parts of Surrey. There was one long easy top gear climb, and then the next hill, known as Horse Block Hollow, leading on to Hart Woods and Winterfold. It was a long ascent terminating in a grade of about 1 in 5 with a rough but not too bad surface, but there were a few failures here. Then came a lengthy descent to Shere, where the famous Combe Bottom hill was negotiated. This was not very severe, but the descent on the other side was rough and uncomfortable. The remainder of the journey through Ockham was without incident.

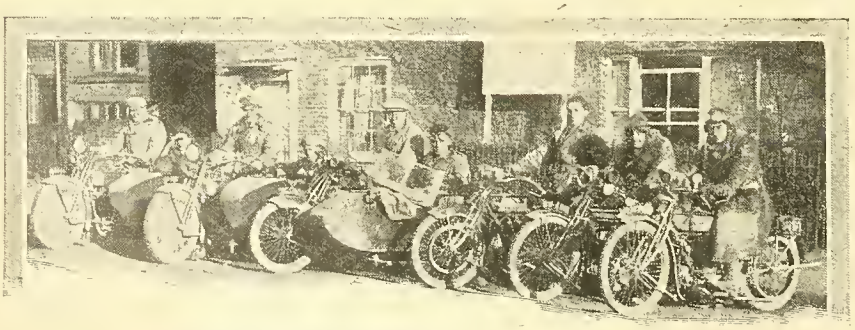
A trio of the winning Oxford team taking a corner in the Surbiton Team Trial. L. and J. Avery (Harley-Davidsons) are shown in the foreground, and R. J. Piggott, riding ahead, on his 4 h.p. Norton.

The first casualty we saw was an Ealing man, Gordon (Harley-Davidson), who was in trouble near East Horsley. Just beyond Ripley, Browning (Zenith), Public Schools M.C.C., was held up by a flat back tyre. Five of his team had stops, and only one survived. This was pretty bad, but even more unlucky were the North-West London team who lost all their men.

Minor Troubles that Count.

The Bedford team suffered two stops. Hartop (Harley-Davidson sc.) had a broken plug porcelain, and Bristowe (their captain) experienced a short circuit.

The fate of the riders of the N.W. London M.C.C. is interesting. Goddard (Enfield sc.) had tyre trouble; Pittock (Henderson sc.) had a choked jet; Phillp (A.J.S. sc.) failed on Bright Street, Guildford; Auty (James) stopped on Horse Block Hollow; Moon's (Douglas) belt came off; and Whitefield (Triumph), who rode instead of the captain, H. J. Pooley, started with an almost empty petrol tank.



All credit is due to the winning team, which had further to come to compete than any of the others.

The results are as follows:

1. OXFORD MOTOR CLUB (winners of the Maudes Challenge Shield and Memento), error 38m. 38s.; average error per rider 6m. 26.3s.; all non-stop runs. E. Colgrove (4 Triumph), A. D. Cruikshank (3½ Norton), L. A. Welch (4¼ B.S.A.), R. J. Piggott (4 Norton sc.), J. Avery (7-9 Harley-Davidson sc.), and L. Avery (7-9 Harley-Davidson sc.).

2. NORTH LONDON M.C.C. (silver medals), error 43m. 37s.; average error per rider 8m. 43.4s.; five non-stop runs. C. C. Lahin (4 Indian), D. H. Williams (4 Indian), A. J. F. Beaurain (3½ Sunbeam), R. W. Greaves (4 Norton sc.), H. B. Shutes (7-9 Matchless sc.), and W. F. Emarton (7-9 Harley-Davidson sc.).

3. BRIGHTON AND HOVE M.C.C. (bronze medals), error 60m. 23s.; average error per rider 12m. 4.6s.; five non-stop runs. H. D. Dobson (3½ Norton sc.), E. Volk (4 Indian sc.), L. G. Watts (4 Triumph sc.), W. H. Sheraton (3½ Norton), A. B. Friend (3½ Nut), and G. S. Richards (4 Indian).

The winning Oxford Team. From left to right: L. Avery (Harley-Davidson), J. Avery (Harley-Davidson), R. J. Piggott (Norton), L. A. Welch (B.S.A.), A. D. Cruikshank (Norton), E. Colgrove (Triumph).

T.T. NOTES AND NEWS.

T.T. Mounts being Tried Out at Brooklands. Improved Landing Facilities at Douglas.

ONE of the J.A.P. riders who has recently been on the Island tells us that most of the course is in good condition. The mountain road is rather bad, but will not be repaired too early in case of rain rendering further repairs necessary.

* * * * * *

At present it is not intended that the T.T. Sunbeams will have o.h.v. engines.

* * * * * *

T.T. practising commences on Tuesday, May 31st, and not on Empire Day as has been announced.

* * * * * *

A new Binks racing carburetter is being produced, about which we shall probably hear more at Brooklands and the Isle of Man.

* * * * * *

We recently approached the Midland Railway Co. regarding its Heysham-Douglas steamer service, and are advised that the company does not propose to run any special steamers during the T.T. week.

* * * * * *

Strange as it may seem, reliability trials are quite favourite events for testing, or rather, perhaps, running in new T.T. machines.

* * * * * *

In the Victory Cup Trial in March de la Hay competed on a new sports T.T. Sunbeam, which it was then thought he would use on the Island this year. It is possible now, however, that he may have something even livelier for the race itself.

* * * * * *

There were some very fast New Imperial and Diamond lightweights in the last Midland Centre A.C.U. Open Trial. Some of these again were the actual T.T. machines.

* * * *

The new T.T. 350 c.c. J.A.P. engine is shaping well. D. A. Atkin used one in the Midland Centre Trial in his Hobart, which was particularly fast.

* * * *

One of the new T.T. machines for the Senior Race has been lapping Brooklands at 60 m.p.h. in second gear.

* * * * * *

For some time we have been in communication with the Isle of Man Steam Packet Co., Ltd., and the Isle of Man Harbour Commissioners urging that better provision be made for the loading and unloading of motor cycles at Douglas. We are now able to announce that the latter body has written *The Motor Cycle* stating it is hoped that for the period of the T.T. races a crane for dealing with motor cycles will be provided. This is indeed a step in the right direction, for the commissioners fully appreciate the necessity for improving the landing facilities, and it is not improbable that, before long, the pier will be widened and a permanent crane provided.

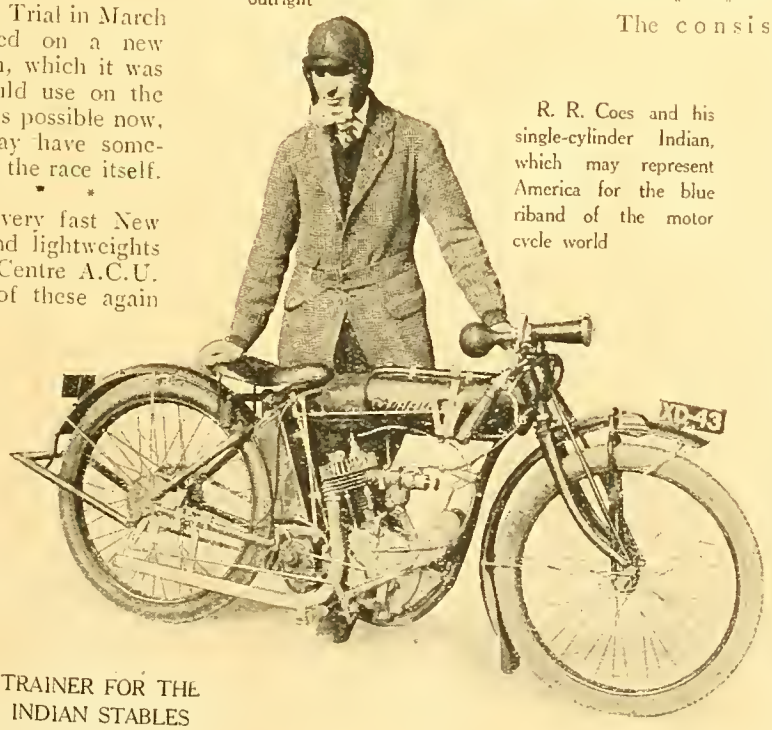
* * * * * *

This year the Indian T.T. machines will be of the single-cylinder type, practically half the well-known "7-9," in fact. R. R. Coes has arrived from the U.S.A. to take charge of the team.

* * * * * *

Carburetter experts are much in evidence at Brooklands just now, while so much tuning is being done for the Tourist Trophy.

* * * * * *



The consistent running of the Climax-engined New Comet at Brooklands last week, when it broke several long-distance records, revealed the vast improvement made in two-strokes of recent years. Before the war no two-stroke held a record, now they are beating four-strokes. The New Comet cruised round the T.T. course last year and averaged 30.4 m.p.h. This year, after twelve months of tuning, it should give a good account of itself.

* * * *

How would half the 100 m.p.h. Harley do for the Senior T.T.?

The Motor Cycle trophy for 250 c.c. lightweights in this year's Junior T.T. It weighs 48 oz., and, without plinth, stands 18in. high. As last year, the trophy will be won outright

R. R. Coes and his single-cylinder Indian, which may represent America for the blue riband of the motor cycle world

Yorkshire Centre A.C.U.

Owing to the industrial situation, the Sporting One Day Trial of the Yorkshire Centre A.C.U., to have been run off by the Sheffield and Hallamshire M.C.C. on the 7th inst., has been postponed.

North Wales M.C.C.

The club held a very successful petrol consumption test on April 23rd and 28th, and quite a good number of competitors turned out. The provisional results are as follows: 1, J. Howard Davies (3½ Norton); 2, R. Edwards (2¾ New Imperial); 3, R. M. Johns (2¾ New Imperial).

West Kent M.C.

W. L. Strong's team proved the winners of the team trial on Saturday last with an average time error of 6m., each member making a non-stop run. Team: W. L. Strong (4 Triumph), G. Lord (4½ Humber), J. Jessop (2¾ New Imperial), and J. Eastwood (8 Zenith). A special medal was awarded to Wilson-Smith (4 Blackburne) for the best individual performance.

Ystalyfera and Swansea Valley M.C.C.

On Thursday last members of the above club took part in a reliability trial in which three prizes were competed for. The first prize, a beautiful gold wristlet watch, presented by W. Payne, watchmaker and jeweller, Ystradgynlais, was won by A. E. Gardner (on a 3½ Norton), the second prize by D. E. Rees (3½ Sunbeam), and the third prize by Will James (4 Norton).

Leicester and District M.C.C.

Owing to the death of the President, the club's programme has been somewhat delayed. However, the Yates Trophy was competed for on Saturday, over a course of fifty-four miles of difficult going, at a schedule speed of 18 m.p.h. (without speedometers or watches). Out of thirty-six starters, thirty-five finished in the following order: 1, H. Cooper (4 Triumph); 2, H. J. Woodgate (8 Morgan); 3, A. Bowerman (2¼ Velocette).

Barrow and District M.C.

On the 1st May the club held a very well supported hill-climb on School Hill, Lindal. Results on time were as follows:

CLASS 2 (machines up to 350 c.c.).—1, L. S. Parker (2¼ Velocette), 49s.; 2, W. Dall (2¾ Omega-Jap), 52s.; 3, C. W. James (2¾ Francis-Barnett), 53⅘s.

CLASS 3 (machines up to 500 c.c.).—1, H. Jackson (3½ Sunbeam), 36s.; 2, Guy Jefferys (3½ Norton), 36⅘s.; 3, P. Hoggarth (3½ Norton), 37⅘s.

CLASS 4 (machines up to 550 c.c.).—1, H. Jackson (3½ Sunbeam), 36⅘s.; 2, Guy Jefferys (3½ Norton), 37⅘s.; 3, M. Sedgwick (3½ Sunbeam), 39⅘s.

Lewes and District M.C.C.

Complete results of the recent hill-climb are appended:

LIGHTWEIGHT SOLO CLASS.—1, E. Jenner (2¾ Royal Ruby), 1m. 35⅘s.; 2, L. Holt (2¾ Verus), 1m. 38s.; 3, W. J. Hylands (2½ Royal Ruby), 1m. 40s.

UNLIMITED SOLO CLASS.—1, W. H. Sheraton (4 Norton), 1m. 12⅘s.; 2, G. G. Pyecroft (4, Wilkin), 1m. 21s.; 3, R. G. Martin (3¾ Scott), 1m. 26⅘s.

UNLIMITED SIDECARS.—1, S. Dunford (7-9 Harley-Davidson sc.), 1m. 24⅘s.; 2, H. V. Warren (8 Enfield sc.), 1m. 25⅘s.; 3, G. W. Blakey (7-9 Harley-Davidson sc.), 1m. 33s.

CYCLE CAR CLASS.—1, J. A. Lawford (8 A.V.), 1m. 24s.; 2, L. Humphries (8 G.N.), 1m. 44s.

The A.V. did not carry a passenger.

Bridgwater and District M.C. and L.C.C.

Ideal weather and a very large entry attracted a huge crowd to witness the inter-club hill-climb held at Puriton Hill on Saturday last, 30th ult. The course was a measured half-mile, and some very fast times were recorded. H. Thorpe (3½ Douglas) made fastest time of the day, 33⅕s., beating V. G. Tucker (3½ Norton) by ⅗s. Results:

CLASS 1.—T. J. West (2¾ Douglas), 56s.
CLASS 2.—V. G. Tucker (3½ Norton), 33.4s.
CLASS 3.—V. G. Tucker (3½ Norton), 35.1s.
CLASS 4.—V. G. Tucker (3½ Norton), 34s.
CLASS 7.—E. Kickham (2¾ Douglas), 39.4s.
CLASS 8.—H. Thorpe (3½ Douglas), 34.2s.
CLASS 9.—H. Thorpe (3½ Douglas), 33.1s.
CLASS 10.—S. L. Bailey (3½ Douglas), 34.1s.
CLASS 5 (Sidecars).—V. Richards (4 Triumph sc.), 56.4s.
CLASS 6 (Sidecars).—J. Glanville (4 Norton sc.) and C. A. Pollard (8 Zenith sc.), 47.4s.
CLASS 11 (Sidecars).—E. Kickham (3½ Douglas sc.), 40s.
CLASS 12 (Sidecars).—E. Kickham (3½ Douglas sc.), 40s.

A Section devoted to Club Announcements will be found on Supp. xlvii.

Coventry and Warwickshire M.C.

On Saturday there will be a social run to Moreton-in-the-Marsh, with tea at the Redesdale Arms Hotel, at the invitation of the president, Col. J. A. Cole.

Sheffield University M.C.C.

The opening run took place last Thursday afternoon to Castleton, about twenty-five members being present, the President (Mr. J. W. Kershaw, B.Eng., M.Sc.) leading. Speedwell Cavern was visited.

Ilkley M.C. and L.C.C.

W. Bradley (7-9 Indian sc.) was the winner of the recent "despatch rider" reliability trial. L. A. Runton (3 A.B.C.) and J. S. Duxbury (3⅝ Scott sc.) were second and third respectively.

Surrey M.C.C.

Six teams competed in the inter-team trial on Saturday, 23rd April. Starting from Guildford, competitors had to cover about fifty miles non-stop, and were only allowed to be one minute early or late.

The winning team was supplied by the Farnham and Farnborough Centre, which was represented by H. C. Mansell (3½ Rover), W. L. Taylor (4 A.J.S.), L. E. Fenn (3½ Rover sc.), and R. P. Robinson (8 Buckingham).

Loughborough and District M.C.C.

There were no fewer than 160 entries and 4,000 spectators at the hill-climb organised by the above club, and assisted by the Mansfield Club, at Beacon Hill, Woodhouse Eaves, on the 23rd ult. Each class was divided into two sections: one for all those unconnected with the trade or who had never been placed first in an A.C.U. open speed trial or hill-climb, and Section B for the rest.

The special medal given in the two-stroke class for the best time by a member of the Shepshed branch of the Loughborough Club was secured by T. W. Gent (2¾ Sun).

Results:

CLASS 1 (Sidecars between 450 c.c. and 550 c.c.).—On Time: 1, H. Petty (3½ Norton sc.); 2, R. Harris (3½ Norton sc.). Sidecars over 550 c.c.—On Time (amateurs only): †1, K. S. Topping (8 Zenith sc.); 2, D. L. David (7-9 Indian sc.). On Formula: 1, D. L. David; 2, K. S. Topping.

†Fastest amateur time, 67 m.p.h. solo; 52 m.p.h. sidecar.

SIDECARS (Unlimited Capacity). On Time.—Trade Section: *1, H. Petty (3½ Norton sc.); 2, H. R. Davies (2¾ A.J.S. sc.).

*Fastest sidecar time of the day, 56.2 m.p.h.

SOLO TWO-STROKE (Single-cylinder up to 350 c.c.). On Time.—Section A: 1, A. Bowerman (2¼ Velocette); 2, T. W. Gent (2¾ Sun). Section B: 1, J. R. Sylvester (2½ Velocette); 2, H. Petty (2½ Velocette).

SOLO MACHINES (not exceeding 350 c.c.). On Time.—Section A: 1, M. J. Wright (2¾ Douglas); 2, A. Bowerman (2½ Velocette). Section B: 1, H. R. Davies (2¾ A.J.S.); 2, J. R. Sylvester (2½ Velocette).

SOLO MACHINES (not exceeding 560 c.c.). On Time.—Section A: 1, H. M. Barron (3½ Norton); 2, F. T. Hatton (3½ Norton). Section B: *1, H. Petty (3½ Norton); 2, H. R. Davies (2¾ A.J.S.).

*Fastest time of the day, 70.8 m.p.h.

SOLO (up to 750 c.c.). On Time.—Section A: 1, F. T. Hatton (3½ Norton); 2, G. Mills (6 Matchless). Section B: 1, H. R. Davies (2¾ A.J.S.); 2, H. Petty (3½ Norton).

UNLIMITED. On Time.—Section A: 1, K. S. Topping (8 Zenith); 2, H. M. Barron (3½ Norton). Section B: 1, H. R. Davies (2¾ A.J.S.); 2, H. Petty (3½ Norton). On Formula.—1, H. Petty (3½ Norton); 2, H. R. Davies (2¾ A.J.S.).

The Mansfield prizes were as follows:

560 c.c. CLASS.—W. White (3½ Rudge).
750 c.c. CLASS.—G. Mills (6 Matchless).
UNLIMITED C.C.—1, G. Mills (6 Matchless), 31⅗s.; 2, E. Chandler, 31⅘s., on a machine of his own design.

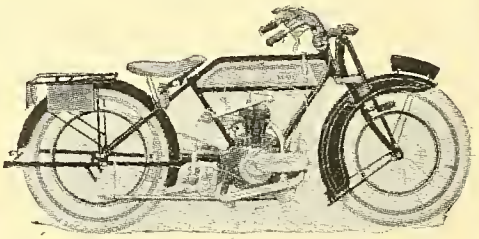
WOOLER
MOTOR-CYCLE Co (1919) LTD

ALPERTON, LONDON.

OWING to its perfect spring suspension and other refinements, the **WOOLER** is the handiest and most comfortable Solo Motor Cycle in existence.



A long journey over the average roads of to-day requires one of two things—wonderful physique or a Wooler spring frame motor cycle. The first, perhaps, you possess, but, if you don't, you may find it difficult to acquire. The second, if you don't already possess it, is immediately within your reach.
The price, **85 guineas**, brings the Wooler within the range of all, and a post card will bring full particulars to your letter box.
Please don't delay to write to us.

PHILIPSON'S

PATENT AUTOMATIC GOVERNOR

PULLEY

AND GEAR COMBINED.

Don't Scrap an old Engine,

but give it a NEW LEASE OF LIFE by fitting the

World-famed Philipson Pulley.

Entirely Free from troublesome and weighty complications—only two working parts—no levers, rods, wheels, etc., to worry about. Simply takes the place of the ordinary pulley. One nut secures the complete gear to the engine. Can be fitted without any alterations to most direct belt-driven engines in a few minutes.

For hill-climbing it is unsurpassed. Makes mountaineering easy.

IMMEDIATE DELIVERY.

Send for Illustrated Booklet.

During the past few weeks the following machines have been fitted with PHILIPSON Pulley:

Triumph,	Arno,
Rover,	Rex,

Twenty-one Years' Progress.

TO-DAY (Thursday) the twenty-first anniversary of the historic 1,000 Miles Trial of 1900 is being celebrated in London. This meeting will no doubt be the means of a great deal being said and written concerning the progress made in mechanically-propelled vehicles since that date.

Anyone, who has followed the remarkable development of the motor cycle and the car concurrently must be impressed by the outstanding fact that the former has made greater strides than the larger vehicle. The cars of twenty-one years ago embodied almost every main feature of the present-day vehicle. In other words the 1900 types formed in general design and disposition of parts the nucleus of the 1921 car *de luxe*.

On the other hand, motor cycles have altered out of all recognition, both in appearance and practice. Then, the most popular types were tricycles and quadricycles, neither of which type survives to-day. Engines of 1900 had a low compression ratio, but here again, except for their ignition and carburation systems, and the fact that mechanically-operated exhaust valves are now general practice, they differed very little from the standard types in use to-day.

It is in external design and transmission systems that the greatest progress is observable. Since 1900, we have passed through several transient stages of progress, each marked clearly, one by the advent of the spray carburetter, another by the magneto, and a third by the countershaft gear box.

From high and unstable machines with pedalling gear, the motor cycle has developed into a type of vehicle which can be handled with comfort and confidence by the inexperienced. The modern motor cycle is also practically fool-proof.

Those who both ride motor cycles and drive cars should ask themselves whether the latter type of vehicle is any easier for the novice to manage than its ancestors of the types that competed in the 1,000 Miles Trial. Almost anyone can be taught to drive a motor cycle in an hour without undue risk of damaging the engine or the gears. Not so with the car, to change the gear of which requires, in most cases, skill that is not acquired by the novice without a great deal of practice.

If the main object of the automobile and the motor cycle industries has been to produce vehicles for people who are not mechanical and who require the minimum amount of tuition, then it can be said that motor cycle manufacturers have made greater progress to this end.

In one direction, at least, the car has made greater progress. It is, mechanically, practically silent, whereas the majority of the motor cycle engines of to-day cannot be compared with the modern car engine on this point.

Motor cycle progress during the past twenty-one years has been in clearly defined epochs, and we think that recent developments in engine design (which has been practically stagnant for so many years) are about to start another of these epochs. This year's T.T. race and Brooklands meetings will reveal the form these developments will take.

Public Interest in the Sporting Side.

IT would seem that the all-popular football match has at last found a serious rival as a week-end attraction for the crowd. Several recent *local club* events have each attracted several thousand spectators.

Speed has a wonderful lure; and miniature Brooklands events, on quiet hills or private roads, attract the public in ever-growing numbers. Those who come for thrills at present may in the future attend as a matter of interest, which may eventually beget the desire for possession.

Never has the enthusiasm of the general public for motor cycles been greater, and every competition attracts large crowds to the test hills. The younger generation in vast numbers takes an interest in the motor cycle movement, which must eventually augment the numbers of motor cyclists.

An index to the advertisements in this issue will be found on the page facing the back cover

OCCASIONAL COMMENTS By "IXION"

Some Dream.

THE other day the surgeon who takes up the bearings of my physical prime mover found it necessary to give me a whiff of some infernal dope, which in the language of his trade is known as "A.C.E." As luck would have it, just before I went off, a well-tuned two-stroke passed the open window of the nursing home—probably O'Donovan on his Velocette—anyhow, it had a *lovely* exhaust. Thanks to this I spent forty-five minutes of what the doctors humorously term "unconsciousness" at the wheel of the 450 h.p. Sunbeam. Some readers will fancy that to enjoy such a 'bus, even in imagination, is worth while waking up all blood and bandages with a complexion the colour of mustard. Opinions differ. In my dream the 450 h.p. Sunbeam shed both her front wheels immediately after we started, but by keeping the pace up to 150 m.p.h. it was just possible to keep her breastbone off the road. The route lay through Devonshire lanes. Wonder my hair was not grey when I came round. Next time I have to take anæsthetic, I shall put plasticine in my ears, and hang a copy of "The Soul's Awakening" at the foot of the operating table.

Gossip and Libel.

MY week's postbag has been rather interesting in quite an unusual way. If I had forwarded certain items from it to the manufacturers concerned, a crop of libel actions would have followed. Motor cycling circles are always as full of gossip as a mothers' meeting or a bank clerks' luncheon party. Jones starts the ball rolling by saying that the valves of the "A" break this year; Smith, not to be outdone, says that anything is better than owning a "B," because its roller bearings melt; and Brown tops the yarn by saying the "C" has just been reduced because the factory has 2,000 in store, and the firm's mechanics are being allowed to buy them for £25 cash. Such imaginary statements have a variety of origins. In some cases they are malicious lies spread by persons interested in a rival make. In others, the amateur motor cyclist invents the yarn (or 99% of it) because he likes to pose as being in the know. Occasionally, the story is an ingenious expansion of an isolated mishap into a universal catastrophe. Decent men will be very careful how they spread discreditable statements without any guarantee of their accuracy. Gossips should at least have the commonsense to recognise that the law admits of rather heavy damages for commercial libel.

It is particularly hard for makers and agents to earn an honest living just now, and the air is full of these lies. Private owners should be uncommonly careful how they pass them on.

Sutton Bank.

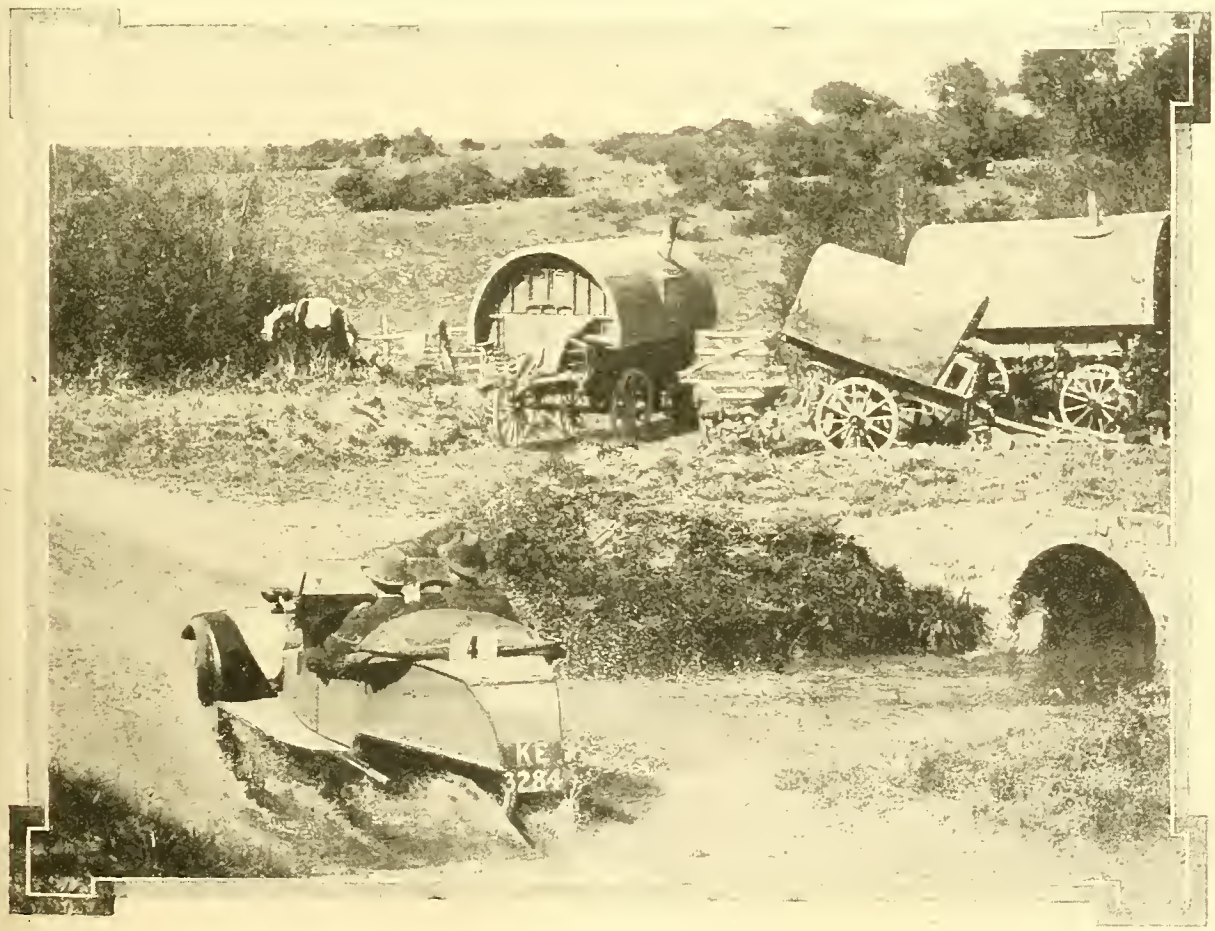
THE spectacle of so many attempted suicides on the bad corner of Sutton Bank in the York M.C. climb started some of the greybeards talking. The hotel contained three ancient riders, each of whom claimed to have "discovered" Sutton. One alleged that the hill was never heard of until the gentleman who represents the latter half of P. and M. climbed it for a bet on his firm's first two-speeder in or about 1904. No. 2 claimed to have tackled it in all innocence on a holiday trip to Scarborough about 1905, and to have pushed up every yard of it. No. 3 took three people up it on a Riley tricar in 1905, and was so impressed by the gradient that he came back next day with a surveying apparatus to measure the rate of ascent. Any other claimants? I well remember my own *début* on the hill, for it developed a blow-hole in a brand new cylinder which had duly passed its pressure test at the factory.

The T.T.

THIS year's T.T. ought to be a regular breath-catcher. In the Senior event most of the machines will be more than capable of all the speed which the course can hold. There is also a large entry. Stamina is more commonly wedded to speed than it used to be, and one no longer expects the hares which lead after two laps to crack up in lap three, and let the tortoises through. I know it is said that there is a shortage of first-class jockeys, but I do not believe it. If we could unearth five or six class riders per annum in the old days when there were perhaps only 30,000 motor cyclists in the country, of whom not one in 500 had ever straddled a 60 m.p.h. 'bus, how many good speedmen can we produce now that there are 186,000 of us? It is quite on the cards

Ixion's "MOTOR CYCLE REMINISCENCES" have lately been published in book form, price 5s. 3d. post free, from "The Motor Cycle" Offices, 20, Tudor Street, E.C.4.

Occasional Comments.—

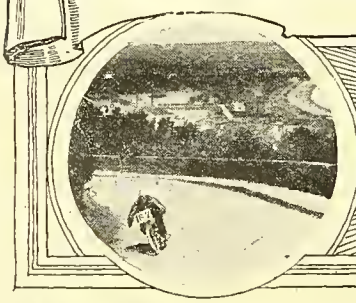


that the start of the concluding lap may see five or six men fighting out the issue. No keen rider should fail to cross to the Island this year—we ought to see the finest motor cycle race in history.

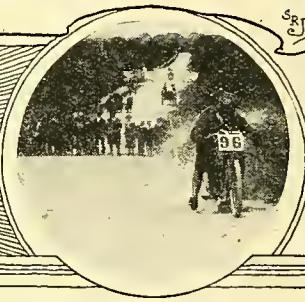
Well Dodged.

IT was a balmy evening, and I sucked the pipe of contentment in the garden of my host. Entered *via* the hedge the stateliest black Tomcat I had ever seen, and minced delicately over towards where the day-old Indian Runner ducks were imperfectly fortified. Just as I decided to interfere, my host's greyhound espied Thomas, and came across the lawn at a cool 50 m.p.h. Thomas never turned a hair, but waited disdainfully in his tracks. Just as the hound arrived, Thomas shot up vertically about 2ft. into the air, waited aloft till the hound had passed by, and then descended again. I fell to envying the cat's coolness and strategy. Anon I rode home. As I burbled along at perhaps 30 m.p.h. I came up level with a little maid of some ten summers. She dropped her ball, which rolled under my front wheel, whither she promptly followed it. There was no time to think. By force of pure instinct I executed the most miraculous right-angle turn outwards, instantly succeeded by another right-angle turn inwards to save me from crashing into a wall. I comfort myself with the reflection that perhaps we are still as dexterous as the lower animals.

Impulse Starter Magnetos.



THE impulse starter magneto was originally devised for use on the sort of engine which cannot be swung by less than two men unless it is hot, and the inventor had no thought of motor cycles in his mind. We have one of these interesting gadgets in the office just now—a sample of the M-L breed. I suppose all my readers know how the thing works. There is a dog joint in the drive; a pawl chocks the armature before each sparking position, whilst the driving shaft goes on and winds up a clock spring. Just when the spark is needed, the pawl is freed, and the spring jerks the armature past its maximum at the dickens of a bat. The result is a spark so hot that the engine simply *has* to fire. These special magnetos are not particularly expensive, and are of some interest to any motor cyclists who wish to reduce the labour of starting their engines—disabled men, girls, and very elderly riders. The general effect is simply that at 50 r.p.m. you get a 500 r.p.m. spark.



NOMADS. Consciously or unconsciously, the open road lures every class, and judging by the typically reposeful attitude of the gipsies, it is a good world to live in. The scene is between Great Rollright and Lower Brailes, and depicts R. Croucher (Coventry-Premier) during the Midland Light Car Club Trial in which he obtained a gold medal.

T.T. NOTES AND NEWS.

An Analysis of the Entries—Thirteen Nortons, Eight Sunbeams, and Eight Triumphs in the Senior Race, Many Private Riders.

THE following table of entries for the T.T. shows the numbers of the various motor cycles represented in the annual race:

SENIOR.

A.J.S.	2	Martin	2
*Blackburne	2	*Norton	13
B.S.A.	6	Rover	3
†Coulson	1	†Rudge	2
Douglas	3	Scott	4
Indian	4	*Sunbeam	8
James	3	*Triumph	8

* Entered by manufacturers: Norton 6 Sunbeam 4, Triumph 6, and Blackburne 1.
† Private entries.

JUNIOR.

A.J.S.	6	*Massey-Arran	3
*Blackburne	5	New Comet	1
*Coulson	2	*New Imperial	5
Dot-Jap	1	New Scale	1
*Douglas	5	N.U.T.	2
Hawker	1	Omega	1
*Ivy	5	*Velocette	3
Levis	4	Wooler	2
Martin	2		

* Entered by manufacturers: Douglas 3, Ivy 1, Coulson 1, Velocette 1, Blackburne 3, Massey-Arran 2, and New Imperial 4.

* * * * * *

In our correspondence pages this week we publish a letter from the well-known Midland competition rider, H. Boynton, who suggests that *The Motor Cycle* Cup should be known as "*The Motor Cycle* Lightweight Tourist Trophy."

* * * * * *

There will be at least two Rudge Multis in the Senior race, and they will be watched with interest, since this make won the 1914 event.

* * * * * *

The entry of four Scott Squirrels again brings the two-cylinder two-stroke into the front rank as a possible winner of the senior event. Twice the Scott has won, and from all accounts the new Squirrels are "hot stuff." Their even torque and ability to corner at high speeds make them particularly suitable for the T.T. course.

* * * * * *

J. J. Whalley, who is riding a $3\frac{1}{2}$ h.p. Sunbeam for W. Atkinson and Son, is a promising rider whose performances at Northern hill-climbs we have watched with interest. He is one of the post-war school of riders.

* * * * * *

L. Mitchell is another rider who should give a good account of himself on a Norton. The corners and bends on such hills as Waddington Fells and Sutton Bank have given him some excellent T.T. practice.

* * * * * *

Of the Scott riders, C. P. Wood is prime favourite at present, but R. W. Stansfield should be watched. Langman should be able to put up a good performance also; he practically lives on a Scott.

* * * * * *

The Ilkley Club has entered its captain, G. Clapham. Why have not other clubs entered a representative?

* * * * * *

A new entrant in the Junior race this year is the Omega.

* * * * * *

Eric Longden is riding a $2\frac{3}{4}$ h.p. Coulson in the Junior and a $3\frac{1}{2}$ h.p. of the same make in the Senior. He rode in last year's event on a Dot-Jap twin.

* * * * * *

Contrary to expectations, the T.T. Sunbeams will not be special racing machines designed expressly for the race. The o.h.v. Sunbeams will not be used, but standard sports model engines with side-by-side valves. The Sports Sunbeam is a standard model evolved from the T.T. machines used in last year's race. There may, of course, be minor additions, such as mechanical lubrication.

* * * * * *

500 c.c. motor cycles with their 75 to 92 m.p.h. capabilities are too fast for the T.T. course. What is wanted are machines that will be easy to steer, quick to accelerate, and that will put up a high average speed rather than bursts at phenomenal speeds like those that beat kilometre records.

* * * * * *

The average speed of last year's Senior winner (T. C. de la Hay, Sunbeam) was 51.79 m.p.h. for the 226 miles. The fastest lap was made by G. Dance (Sunbeam) 55.62 m.p.h.

* * * * * *

Next week, on the 21st, there will be Junior and Senior T.T. Races at Brooklands.

ACTIVITY AMONG THE CLUBS.

(1) 70 m.p.h. on Wingsdown Hill. H. Thorpe crossing the tape on his 3½ h.p. Sports Douglas at the Bath M.C.C. Hill-climb. (2) R. Charlesworth making light of Bright Street Hill on his Zenith sidecar in the Surbiton and District M.C.C. Team Trial. (3) W. W. Chase (2¾ Coulson) on a grass track in the Newcastle M.C. Open Trial. (4) Public interest in motor cycle events is always aroused at a watersplash. T. G. Amphlett (4¼ James sc.) going well in the Midland Centre (A.C.U.) Club Team Trial.

HOLIDAY EVENTS.

A Varied Whitsuntide Programme in all Parts of the Country.

FEW clubs will be inactive this Whitsuntide; and never has the programme been more varied.

Of course, the big event will be the M.C.C. London to Edinburgh Run, with its 230 entries, and with which we deal fully elsewhere. It is becoming increasingly popular for clubs to organise runs to see the M.C.C. event at points of interest *en route*. The Central London M.C.C. is attending the start, both the Luton and South Beds. A.C. and the Herts. M.C. and L.C.C. are running out to Biggleswade (a check) on Friday night, Yorkshire clubs will no doubt turn out in force on Cray or Buttertubs, the Northern M.C. (a Newcastle organisation) has announced its intention of making up a party of spectators, and, on the Border, the Berwick and District M.C. is doing likewise.

On Saturday the Birmingham M.C.C. will start its trial to Land's End, over a course which includes Porlock and Lynton Hills, with the Lycett Trophy as the chief award; the return journey on Tuesday, including the ascent of Countisbury and Rising Sun Hills, will constitute an entirely separate trial for the Sangster Cup. This classic event is open to all members of the Midland Centre A.C.U.

An enterprising West-country club, the Bristol M.C.C., was originally to have run its Whitsun week-end trial to Land's End, but to avoid overcrowding it has now been decided to alter the destination to Newquay. Taunton and District M.C.C. is also holding a reliability run to "The End."

On Whit-Monday the Welsh speed championships will be fought out on Pendine Sands. As fifty, or even twenty-five mile, races outside of Brooklands are all too rare in this country, the trials of the Carmarthen and Dist. M.C.C. have an attraction all their own.

In the North the N.E.A.A. (Motor Cycle Branch) is scheduled to hold, also on Whit-Monday, a one day reliability trial, and several important northern clubs have kept this date open in their programmes.

Opinion appears to differ amongst individual clubs as to the best lines on which to arrange the holiday programme; while one or two are organising trials and hill-climbs the great majority have decided on social runs and week-end tours. Some of those adopting the more strenuous course are the Blaina and District M.C. and the Exeter M.C. and J.C.C. (both trials); the Bournemouth and District M.C.C., the West Kent M.C., the Reigate, Redhill and District M.C.C. (hill-climbs).

Ambitious social runs are being undertaken by the Middlesbrough and District M.C., with a week-end tour in historic Galloway, and the West Birmingham M.C.C. with a Welsh tour to Llanfyllan.

Speed-judging competitions, fuel consumption tests, paperchases, and gymkhanas also figure in the list, and all these events will attract their own coteries of enthusiastic competitors and spectators. When it is realised that several closed club events recently have attracted from three to five thousand spectators, in each case, the true significance of a very full fixture list is realised.

Finally, two novel events on Whit-Monday call for a passing mention; one is the three-mile handicap race of the Worcester and District M.C.C. on the Worcestershire County Cricket Club grounds in aid of a local charity, and the other is the New Brighton Tower race meeting, where, in addition to the pedal cycle events, there will be motor cycle pursuit races, and another attack on the track records by G. W. Baker on his 2¾ h.p. A.J.S.

PRICES OF SECOND-HAND MOTOR CYCLES.

A Schedule of Prices at which used and shop-soiled Motor Cycles were being offered in the miscellaneous advertisements of last week's issue of "The Motor Cycle."

NAME, YEAR, H.P.	CLASSIFIED PRICES.	AVERAGE PRICE.
A.B.C., 1920, 3 h.p.	£93, £100, †£100, £110	£101

Guide to the London-Edinburgh Run

228 Motor Cycles and Cycle Car Entrants for this Year's Classic Run to the Scottish Capital. 107 Cars Entered. 400 Miles to be Covered at Schedule Speed in 24 Hours. A Procession of Vehicles 50 Miles in Length.

THE 1921 London-Edinburgh run starts from Highgate to-morrow (Friday) evening. At half a minute after the hour of seven the first of the several hundred competitors will be timed away on his 400 miles journey to the Scottish capital, and at intervals of half a minute the "send-offs" will be continued until nearly ten o'clock.

Present among the competitors, officials, or spectators will be several who competed in the first London-Edinburgh run seventeen years ago, when an entry of fewer than fifty was considered most satisfactory.

This year the competitors' numbers run to nearly 350, of which no fewer than 228 have been reserved for drivers of motor cycles and three-wheeled cycle cars. When the last man is leaving Highgate, the leader will be over fifty miles away.

An Early Check.

Although the entry is not quite so large as it was last year, a fifty-mile procession of motor vehicles may be considered to be quite long enough, especially to those willing officials who do so much to make the event a success. After the start, the first group of checkers will be met at Biggleswade, forty miles on the way. They will commence their timekeeping and the work of obtaining signatures on the time sheet at a little after nine o'clock and finish about midnight; at which time another group will be ready to check the riders at Grantham. They, too, will be on duty several hours while the competitors partake of a hot meal.

Again, at Ilkley, the halfway mark on the route card, there will be more checkers, more breakfast, and a welcome hour's respite.

One Difficult Non-stop Section.

The next hundred miles includes the titbit of the run—the ascent of Buttertubs Pass, a rough rise from Wensleydale over the hills that separate that valley from Swaledale.

As will be seen from the contour given on the following page, the summit is 1,726ft. above sea level, and rises 1,000ft. in three miles. The preceding twenty miles is by no means easy, for the ascent of Cray Ghyll (from Wharfedale) and the descent of Kidstones Pass take the riders through country in which indifferent roads turn and twist between crooked stone walls. Any competitor who finds himself late in the middle of this third hundred-mile section will find it difficult to make up time.

Opinion as to the difficulty of Buttertubs is divided, but the following notes on the condition of the roads in this section, which have been sent to us by readers, are of interest.

Mr. H. E. Philpotts, the hon. secretary of the Keighley M.C., reports that most of the course from Kettlewell to Hawes is in quite good condition. About one-third of a mile at the top of Kidstones, which the competitors descend, is rather bad. A number of gulleys across the road from Buckden to Cray Ghyll require careful negotiation.

Another Yorkshire reader writes: "If anyone is interested in the tyre trade, let him persuade all friends (but especially enemies) to take several runs over the Keld-Nateby moorland road, which comes after the Buttertubs Pass."

Mr. Bernard Newboult, of Shipley, writes that he recently traversed Buttertubs from Hawes, and experienced no difficulty, although for one short steep stretch the surface was very rough.

"A Mere Cart Track."

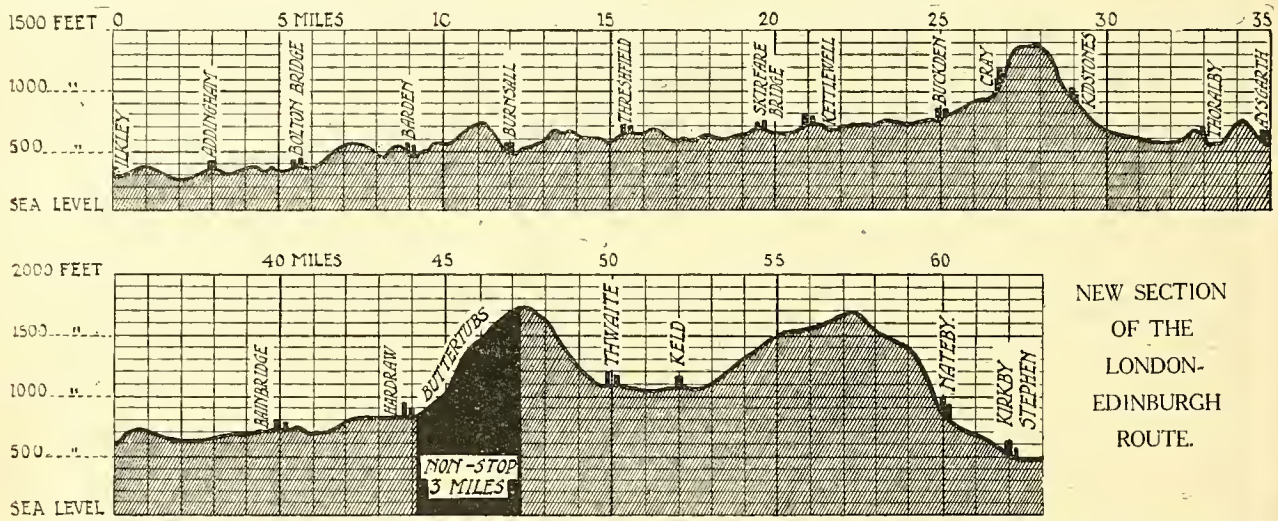
A Leeds reader mentions that the road between Park House and Nateby deteriorates into a mere cart track, with long stretches of loose, unrolled metal.

Thus it will be seen that the competitors this year are riding under conditions much more severe than those of the early runs to Edinburgh were made. The Buttertubs section is a leaf out of the book of a pre-war Six Days Trial, and, as it comes in the third hundred miles after an all-night ride, it is sufficient to try men and machines very severely.

B7

Guide to the London-Edinburgh Run.—

After Buttertubs a further fifty odd miles brings the competitors to the luncheon check at Carlisle, where a stay of little more than an hour is made. A semi-final check is arranged at Moffat, 350 miles from the start, and the final at the Waverley Market House, Edinburgh, where the first man is due at 7 p.m., exactly twenty-four hours after his time of departure from London.



A long trip truly, and any competitor who is found more than 15m. ahead of his schedule time at any point of the course will be disqualified. Quite a simple matter to avoid, the uninitiated may think, but to obtain a gold medal a competitor must also be not more than ten minutes late at any point of the course, and, in addition, must complete the three-mile section from the foot of Buttertubs Pass without stopping.

Secondary Awards.

Silver medals will be awarded to those who lose only thirty minutes, and bronze medals to those who complete the journey in twenty-five hours, and otherwise comply with the regulations.

That the large majority of the competitors will survive this test and win awards is certain, and once more the modern motor cycle will be proved capable of running to a rigid timetable.

Below and on the following page we give a complete list of competitors with their official numbers. By this means spectators will be able to follow the riders' performances on the more interesting parts of the route.

NEW SECTION OF THE LONDON-EDINBURGH ROUTE.

After leaving the breakfast stop at Ilkley the valley of the Wharfe is followed to Buckden, where commences a bad surfaced climb of three miles (Cray Ghyll). The descent of Kidstones Pass brings the competitors into Wensleydale, which is crossed at Bainbridge. At Hardraw, the main road is left for Buttertubs Pass, and in the three miles non-stop section the road has a total rise of 1,000ft. From the summit, rough and undulating roads at a high altitude culminate in a long descent from the mountains to Kirkby Stephen. The official route card contains several divergences from the local and map spelling of place names, but the route is easy to follow.

LIST OF SOLO, SIDECAR, AND THREE-WHEELER ENTRIES.

MOTOR BICYCLES.

No.	Driver and Machine.	Registration No.
1	Ed. Pond (4 Triumph)	XF 1889
*2	L. A. Baddeley (3½ P. & M.)	X 7062

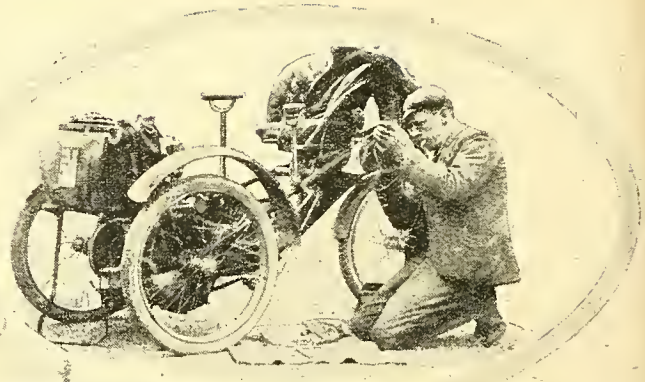
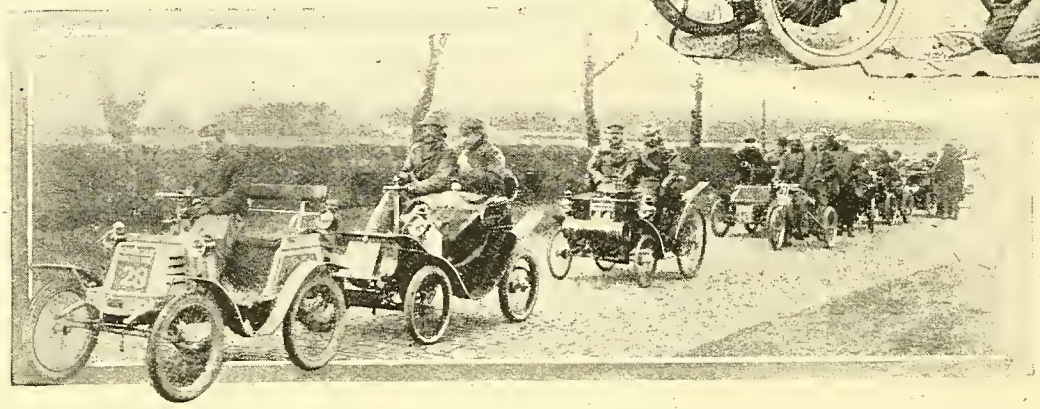
LONDON-EDINBURGH ROUTE.



The times indicated are those of the first man's arrival.



The dotted portion shows the distance covered in darkness by the leaders.

The black portion indicates the only observed hill-Buttertubs Pass

TWENTY-ONE YEARS AGO!

Some Notes on the Historic 1,000 Miles Trial of 1900, when Most Cars were Cycle Cars.

(Left) CYCLE CARS OF TWENTY-ONE YEARS AGO. The start from Edinburgh in the 1,000 miles trial of 1900.

(Right) PART OF THE GAME. A driver of the Simms motor wheel appears to be in no hurry, and is evidently intent on a delicate adjustment.

TO-NIGHT (Thursday, May 12th) most of the survivors of those who participated in the historic 1,000 miles trial of 1900 will sit down to a re-union banquet to celebrate the twenty-first anniversary of the event. Over nuts and wine, no doubt, reminiscences will be related of the days when most cars were cycle cars, and motor cycles with engines over 3 h.p. were considered monstrosities.

After all, twenty-one years is not a very long time on which to look back. Pedal cycles have scarcely been altered during that period: modern locomotives, steamships, sewing machines, and typewriters differ very little from their contemporaries of 1900. Yet, so rapid has been the development of the motor cycle that machines of 1900 are in museums, and those who rode them are regarded as veterans and honoured as such.

In these days of 60 h.p. cars and motor cycles capable of doing 100 m.p.h., the 1900 trial organised by the R.A.C., then the Automobile Club, is ancient history. The largest car was only 12 h.p., and many of them were only 3 h.p., while most of the motor cycles and ancient cycle cars had engines just about as large as those of the modern lightweight.

Sixty-five Entries in 1900.

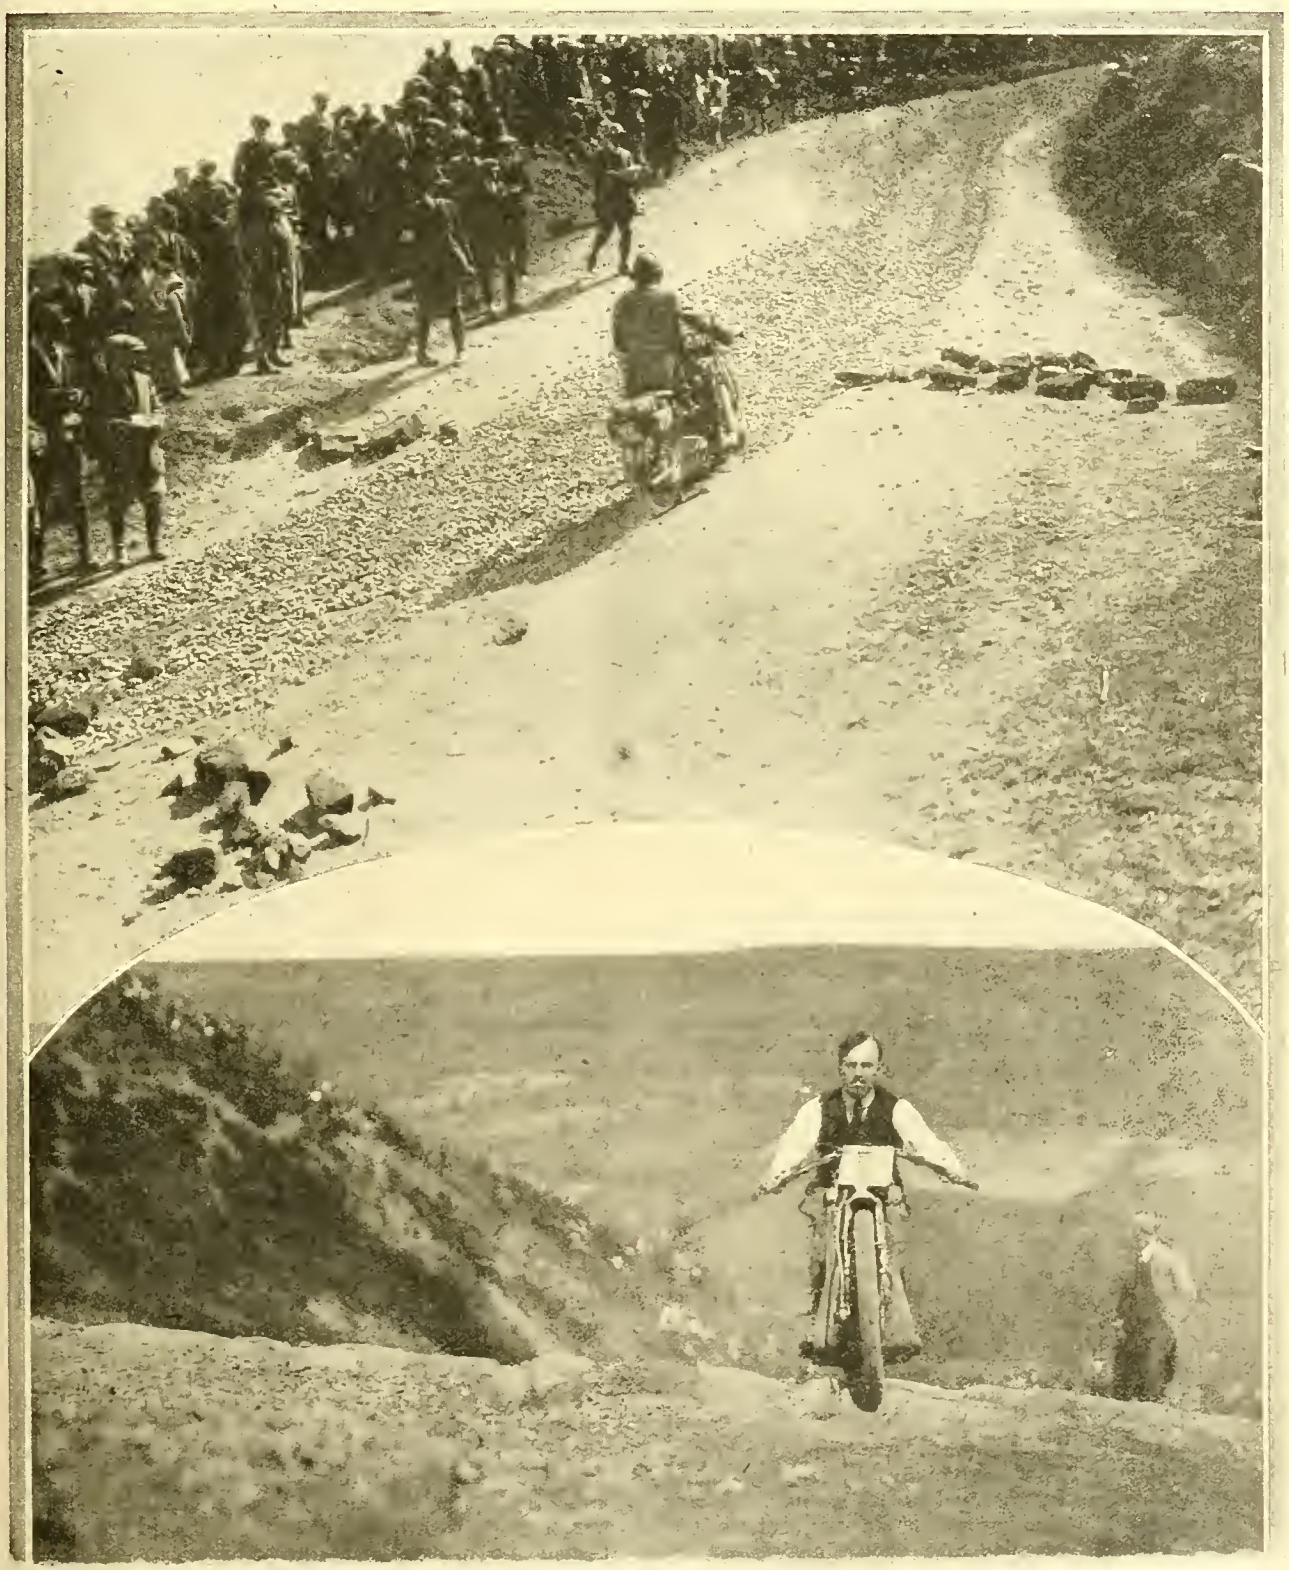
Those who maintain that the cycle car and the light car are comparatively modern productions will find light on the subject in the 1900 volumes of our parent journal, *The Autocar*. A glance at the illustration in the heading will show that the light car of 1900 was as much a cycle car as any 1921 design.

There were sixty-five competitors in the trial, and of these only six were over 8 h.p. These were the Daimlers and Panhards.

Among the entries were an Ariel Quad, two Ariel tricycles (one with a trailer), Simms, M.M.C., and Empress tricycles and a 2¾ h.p. Enfield Quad; the last-mentioned owned by Mr. Edward M. Iliffe, director of Iliffe and Sons Ltd., proprietors of *The Motor Cycle*. There were also two Werner motor cycles, one ridden by a lady.

The route followed was: London, Bristol, Birmingham, Manchester, Kendal, Carlisle, Edinburgh, Newcastle-on-Tyne, Leeds, Sheffield, and London.

20 m.p.h. on 1 in 8.



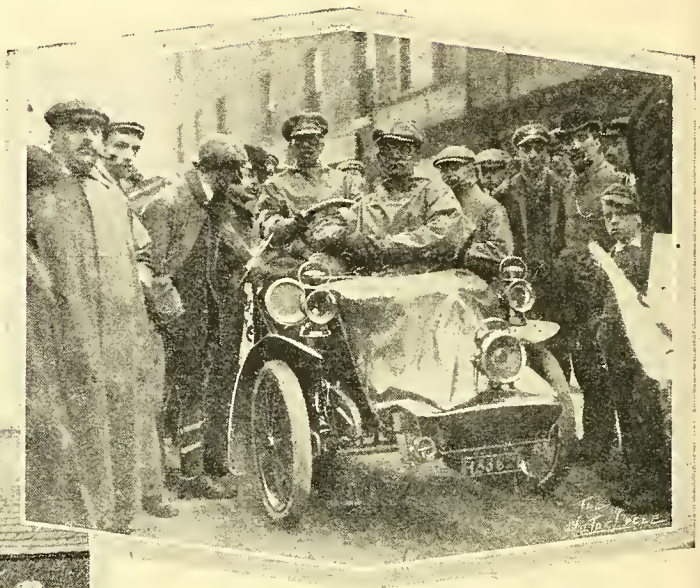
Dunmail Raise was one of the test hills. This hill includes gradients of 1 in 8½, 1 in 11, and 1 in 12, and the timed distance was 3,013½ yards. The speeds of these 1900 machines are well worth recording. Mr. E. M. Iliffe's Enfield Quad made second fastest time, 6m. 15s., being second only to the Hon. C. S. Rolls's 12 h.p. Panhard, which occupied 5m. 49s. An Empress tricycle came next with 6m. 36⅘s., followed by Mr. J. W. Stocks, Ariel Quad, 9m. 37s., with a 7 h.p. Peugeot light car, 10m. 32⅖s.

The following extract from *The Autocar's* report of the performances on Taddington Hill (between Bakewell and Buxton) reflects the spirit of 1900.

"Our Peugeot was doing her best up a fair grade when we heard a faint toot-toot far down the valley. A glance back showed us that the sound proceeded from the horn of the grand twelve horse-power Panhard belonging to Mr. Harmsworth (Lord Northcliffe). . . . The road was straight, naked, and desolate. There was nothing to stop her. With a crish of whirling wheels, a wild flash of plated work, the deep hum of her flying engines, she was past and gone with a just perceptible wave of hands from our Editor aboard, and Mr. Harmsworth sheltering behind his broad shoulders. No sight but that of the Flying Dutchman Westward bound twenty miles out of Town, and in a hurry, too, ever approached it. The up grade, which necessitated our third, and hard put to it at that, this powerful car *de luxe* was taking on her top speed and flinging the miles behind her."

On the hill in question Mr. A. J. Wilson's Ariel tricycle made fastest time = 18.9 m.p.h., the Hon. C. S. Rolls, 12 h.p. Panhard, being second at 17.7 m.p.h. Incidentally, in the speed test from a standing start, the Hon. C. S. Rolls accomplished a speed of 48 m.p.h. Forty-eight finished the course.

BANDS AND BOULDERS ON ROSEDALE ABBEY BANK.



There was a brass band in attendance when the Bradford M.C. and L.C.C. held a "freak hill-climb" on Rosedale Abbey Bank, but apparently the chief attraction for the huge crowd was—the climb. Although the track was in unusually good condition, the club felt compelled not to disappoint the spectators, hence the barricades of boulders which are causing the soloist in the photograph to take to the rough.

R. W. Stansfield, the Scott T.T. rider, is shown in the lower picture on the crest of the hill.

THE LONDON-EDINBURGH RUN: 1904-1920.

Some Reminiscences of an Old Hand.

(Left) Competitors passing through Wetherby in 1907.
(Right) Wilbur Gunn and his Lagonda tricar with which he competed in 1905 and 1907.

WHEN the London-Edinburgh run was first instituted in 1904, those who took part in it were looked upon as foolhardy heroes, as the four hundred mile journey to be covered in twenty-two hours was then considered to be a very wonderful feat.

Even in those early days the now classic run was supported with very great enthusiasm, and considering the youth of the pastime, the entry was exceptionally good. It had one remarkable effect: it really was the making of the Motor Cycling Club.

For the first run it was decided to follow the traditional route traversed by the old mail-coaches, so on that occasion the start was made from the G.P.O. Competitors and officials foregathered at a weird little city public house, and partook of a very indifferent meal, which was little suited to fortify them for their long journey. Forty-six actually started out of a total of seventy entries, and even this inconsiderable number found great difficulty in manœuvring among the crowd.

A Test Hill at Highgate.

At that time electric tramways were being laid along the Great North Road, and to avoid the consequent obstruction the competitors had to surmount West Hill, Highgate, which proved quite an obstacle to some. Twenty qualified for gold medals, and among the survivors those well-known to our readers as expert motor cyclists were J. Crundall (Humber), W. A. Sale and T. Silver (Quadrants), and W. H. Wells then riding a Vindec. Mr. Wells is Trials Honorary Secretary for the London-Edinburgh run this year.

In 1905 the weather was wet at the start, which, like the first one, took place at the General Post Office, and *The Motor Cycle*, I recall, criticised the action of the club in not finding a more suitable place. This time I took an active part in the competition and travelled as a passenger in a 10 h.p. Lagonda tricar, driven by Basil Crump, who was well-known in those days as a motoring journalist. The organisation at the start was not very good, and I recall that in the confusion several of the competitors mounted their machines and rode away before the word "go" was given. There were fifty-seven starters on this occasion, and the solo riders had a pretty bad time on the wet roads through London streets. Imagine the joys of passing through Old Street and Goswell Road in the pouring-rain, on a high framed single-geared motor bicycle which was far more prone to skid than those of modern design. On they had to go, past The Angel, Islington, then along the Liverpool Road, the Holloway Road, up Highgate Hill, and along the newly-made tramlines to Barnet. Many riders came to grief and some others preferred walking to riding over the treacherous surfaces.

Bad Catering Arrangements.

Somewhere in Holloway a spectator heaved an ancient and redolent mackerel at Wilbur Gunn, who was driving a Lagonda. This incident reminds me that the feeding arrangements in those days were appalling. For the early breakfast at Grantham we were regaled with half-cold soup, half-cold tea, blancmange and prunes, and other delicacies, and this in the small hours of the morning when vitality is at its lowest.

My chief recollections of this run were of the wonderful pulling powers of the Lagonda until Don-

The London-Edinburgh Run : 1904-1920.—

caster was reached. After that, when slight hills were met with, the tricar engine overheated badly so that it had to be withdrawn. Twenty-three competitors reached Edinburgh that year.

Dangers of Sleep !

The following year I decided to enter as a competitor, and on this occasion drove a similar machine to that in which I had travelled as a passenger on the last occasion. My companion was the late Captain M. A. J. Orde, R.A.F., who met with a sad end while flying last summer. He was quite a youngster in those days, an excellent companion and a thorough sportsman. This year the run started for the first time, from the Old Gate House Hotel, Highgate, an excellent place which has been used ever since. The run commenced in the rain, but the weather cleared up later, and the rest of the competition took place in fine weather. This is what usually happens during London-Edinburgh runs. The inhabitants of the villages were distinctly amused at my passenger, who slept like a log, rolling from side to side in the basket when I took the corners.

This was a year of tricars. There were numerous examples of these early cycle cars in this competition; one of them was driven by E. W. Brewerton, the well-known oculist, who entered for many subsequent London-Edinburgh runs. It is curious that in these early days the riders used occasionally to go to sleep on their machines, often falling off, but fortunately for themselves the present-day riders do not seem to indulge in the habit. This, the third London-Edinburgh run, was much better organised than its predecessors, but competitors still entered Edinburgh by the east-coast route, which is not nearly so pleasant as that now employed, as it entailed passing through the Durham coalfields, and approaching the Scottish capital through much traffic and over bad surfaces. Of the fifty-two starters in the motor bicycle class thirty-four finished the journey in the schedule time.

My own experience was a good run as far as Berwick, where I found a small burst in one of the front tyres, and a piece of the red inner tube showing through. I was in plenty of time, and could have had a patch put in, but being young and foolish I decided to push on and chance to luck. Of course, luck failed me, the tyre burst, and patches would not hold. I then tried to finish on the rim. Spokes began to fall out of the wheel, and I had reluctantly to retire at Dunbar.

It was this year that the return journey for the cup was first introduced. Only twelve riders entered for this, and, of these, eleven arrived at Barnet.

In 1907 I was passenger in a four-seated car, and had one of those thrilling experiences which have often happened to motorists, without serious results. The car, driven by that well-known motor cyclist, A. J. Sproston, was running perfectly and travelling fairly fast when, somewhere in Yorkshire, it suddenly charged to the off side of the road. Sproston skilfully applied the brakes and we came to a standstill, tilting over at a dangerous angle on the very edge of a deep ditch. The steering tie-rod had fallen on to the ground. I was rescued by C. A. Vandervell, with whom I had a delightful run to Edinburgh.

Police Interest.

Police organisation at the start has always been excellent, and in the early days Superintendent Vedy had the arrangements in hand. He was very sympathetic towards the Motor Cycling Club, and did much to help them. Later he became an enthusiastic motor cyclist, driving a P. and M., and competed in the run two or three times.

In 1908 I was unable to continue beyond Biggleswade for reasons unconnected with the machine. It was a splendid run, with excellent weather, and most enjoyable.

I remember nothing particularly interesting in the 1909 run, part of which I followed on a 4 h.p. J.A.P. engined Zenith, nor in 1910, 1911, or 1912. The organisation had been reduced to a fine art and motor cycles were proving themselves to be more and more reliable each year. Entries also increased to a tremendous extent.

It was not, however, until 1913 that I again became a competitor, and this time I rode a 2¾ h.p. Douglas

This scene at the start of a London-Edinburgh run conveys an idea of the great public interest this classic event creates.

The London-Edinburgh Run: 1904-1920.—

on which the throttle jammed owing to grit thrown up from the road by the front wheel, necessitating the last fifty miles being driven on the exhaust lifter. It was two days before my hand recovered from its stiffness. However, I qualified for a gold medal. This run was over the Lowland hills avoiding the worst traffic into Edinburgh, and was a great improvement.

In 1914 I again rode a Douglas, but of that year's make, and had a wonderful no-trouble run. Then came the war, and it was not until 1919 that the London-Edinburgh was revived. Now there had been 187 entries in 1914, and there were 142 in 1919, which was a really remarkable entry considering the fact that many members had not been demobilised, and that new machines were practically unobtainable.

Embarrassing Public Curiosity.

I had an interesting experience on this occasion, being mounted upon one of the only two A.B.C.'s then made, just at the time that the machine was creating a regular furore of enthusiasm. I remember riding from home to the starting point, and being chased by a youngster on a 1¼ h.p. antediluvian mount, who shouted after me, "Hi, sir, please stop just a minute," but being in a hurry to reach my destination I could not gratify his curiosity.

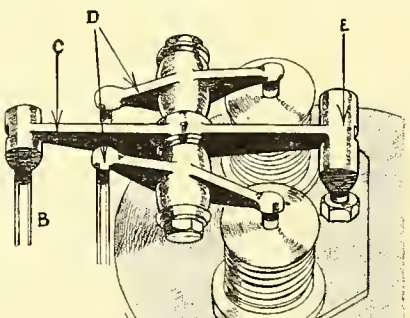
At York I was quite royally received by a Yorkshire photographer who welcomed me on the machine with almost deferential ceremony. The machine ran well, but was rather troublesome to control at slow speeds during the night, owing to the uneven firing on a closed throttle. During the day time it developed appalling clutch slip, and it was only by very careful handling that I got it to recover itself. However, the clutch did not slip again and no further trouble was experienced until after lunch, when we met a tremendous gale ascending towards Mosspaul Summit. The wind was so terrific that it blew the toolkit off the carrier of the machine on an occasion when I stopped to adjust one of the mudguard fixings.

A No Trouble Run.

Last year's event is still fresh in the minds of our readers, and entries surpassed all previous records since there were 316 (these figures do not include car entries). On this occasion I rode a Scott, the tool bag of which I never opened from start to finish. It was a wonderful run and earned for me my fourth gold medal in succession.

In conclusion, a word or two on that somewhat debated point, the severity or otherwise of the run, may not be out of place.

Four hundred miles cannot be considered a run of unusual difficulty nowadays, and the inclusion of Buttertubs, although a commendable attempt to make things more difficult, is not likely to save the M.C.C. many gold medals. Kirkstone Pass, last year, caused considerable anxiety before the event, and did actually account for about a third of the starters, but it is doubtful whether Buttertubs is as difficult, despite its rougher surface.



CONSTANT TAPPET CLEARANCE.

Suggested Design for Self-compensating Overhead Valve Gear.

IT will doubtless be a matter of surprise to the majority of motor cyclists to learn that it is quite common practice to adjust the tappets of many gas engines while they are running.

This is rendered necessary by the great difference in expansion, particularly noticeable in tandem engines, between the cylinder and the tappets operating the overhead valves. This is of sufficient extent to upset the inlet timing and shorten the duration of the suction period.

To remedy this the man in charge of the engine has to get two great spanners, and, by sheer knack, engage them with the tappet screw and lock-nut while they are operating up and down. This performance takes place every time the engine warms up after starting.

An ingenious method of retaining constant tappet clearance designed by Mr. Raymond Morgan. Expansion of the cylinder automatically corrects any alteration of the valve lift caused thereby.

It was to avoid this procedure that the compensating gear illustrated herewith was designed by Mr. Raymond Morgan, 1, Crown Office Row, Temple, E.C.4, and it is of interest in offering a solution of the push-rod clearance problem in air-cooled engines and engines having aluminium cylinders.

In engines of this type the aluminium, having a greater coefficient of expansion, is instrumental in causing the tappet clearance to vary considerably. In large air-cooled engines this variation amounts to .0035 or over $\frac{1}{32}$in., which is very considerable.

The action of the device is extremely simple, and derives, from the relative expansion which is the source of trouble, a cancelling motion which keeps the tappet clearance unaltered.

The rocker D, instead of having its pivot mounted on a forked column on the cylinder head, is pivoted to a compensating lever C. This lever is pivoted to the column E, and at its other end carries a tie-rod B, connecting it with the timing case.

It will be seen that by suitable proportioning of the levers the extent to which the rocker pivot is raised is reduced to the exact amount necessary to keep the clearance unaltered.

The lever C does not add to the reciprocating weight—in fact, as the tie-rod B presents an ideal and accessible place for the tappet adjustment (or, to be more precise, the provision of an exactly similar effect), the adjusting screw and lock-nut can be omitted, the push-rod tucked right down into the tappet, and a marked saving effected in the reciprocating weight.

This method might well and fairly easily be adapted to a number of existing overhead valve motor cycle engines.

AIR-COOLING.

Extracts from a Paper read before the Institution of Automobile Engineers.

THE majority of engines holding British records have a type of combustion head which, theoretically, is the least efficient. This statement was made by Mr. H. D. Teage in a paper he read on Wednesday of last week before the Wolverhampton Centre of the Institution of Automobile Engineers.

The subject of the paper was "Air Cooling as Applied to Motor Cycles," and the author remarked that it is particularly noticeable that those few motor cycles which produce a reasonably high power output per capacity attempt high-speed work for *short distances only*. From this it may be deduced that they are incapable of maintaining their outputs.

Possible Improved Efficiency.

It may be argued by some that present-day cooling is sufficient for the requirements of the average rider; but this is a most unsatisfactory basis on which to work, since it is an undoubted fact that considerable improvement can be made in output per capacity, fuel consumption, and reliability by paying attention to cooling.

It may be true that existing methods of cooling are sufficient for the needs of the average motor cycle engine of to-day; but the average engine at the present time is much less efficient than it should be, and its cooling arrangements are often distinctly haphazard and sketchy.

The two main sources of trouble with air-cooled engines are distortion owing to local overheating, and pre-ignition due to the same cause, the most vital spot being the centre of the cylinder head. These two subjects may be dealt with together, since the primary cause is common to both.

The obvious cures would appear to be a symmetrical cylinder with equal cooling all around, or a method of conducting away the heat from the hottest to the coolest part of the cylinder quickly.

With existing types of poppet valve gear, it is obvious that the nearest approach to the symmetrical cylinder is obtained by the use of overhead valve gear; and, since we are confined to cast iron as a medium for conductivity, we must take care that there is enough of it to ensure a rapid flow of heat within the body of the casting.

Side-by-Side Valve Disadvantages.

At the present moment, over 90% of motor cycle engines are fitted with side-by-side valve cylinders, though there is a steady tendency to adopt overhead valves.

The cylinder head of a side-by-side valve engine quite obviously cannot approach the symmetrical, and the valve side of the cylinder barrel is partly shielded by the ports. To avoid distortion, it is desirable to keep the ports as far from the barrel as reasonable cylinder head design will permit, and to separate the ports entirely from the barrel. This infers a division in the cooling ribs, which in the case of a one piece casting is apt to complicate pattern making and foundry work. On the other hand, two of the most successful modern motor cycles have adopted this practice with admirable results. A separate head permits the same ends to be obtained in a simpler manner; but the head joint is apt to interfere with conductivity between head and barrel, and thus, though it should help to eliminate distortion, the detachable head will require slightly greater cooling area.

Theoretically, the L headed engine is the least efficient form found on motor cycles, yet engines of this type hold the majority of British records. The reasons probably lie in matters not directly connected with cooling, such as port and cam design, also in that, until lately, comparatively little experimental work has been carried out on overhead valve motor cycle engines.

Next in order of theoretical efficiency comes the L head cylinder with one valve placed above the other. This type is a simpler foundry job, and is easier to keep cool, especially if the exhaust port is disposed above the inlet and carried well clear of the head, the lower or inlet port being detachable.

Overhead Valve Types.

Next comes the flat headed overhead valve type, easy to construct, but remarkably difficult to design to give good results.

It would appear that the ports should be set across the frame (in which case there are dead pockets behind the ports), and that horizontal ribs should be used. The last alternative is probably the best, especially if the head is thickened up towards the centre, to enable one or two extra ribs to be employed.

In order to employ valves of adequate size for high speed work and yet provide sufficient air space between the ports, it will be necessary to increase the diameter of the head unless a very short stroke engine is contemplated.

From the point of view of foundry work, the simplest proposition is also the most efficient and easiest cooled. A hemispherical combustion head with valves inclined at an angle of approximately 45° is an easy proposition to cool with horizontal ribs and a simple foundry job.

Radiating Fins.

Regarding the design of fins, the other named four points to be considered are: (1.) It is useless to employ long ribs unless a reasonable thickness of rib is allowed. (2.) Where thin cylinder walls are used, a considerable radius should be allowed between the root and the wall. (3.) Where one rib springs from another (as in the case of vertical head ribs springing from a top horizontal rib), the base rib should be thickened up, or the secondary ribs will be so much useless weight. (4.) All ribs should lie in the line of the normal air flow.

Taking these points in order, the reasons are fairly obvious.

(1.) Heat will not be conducted to the tip of a long rib unless there is a sufficient body of metal to convey it.

(2.) On removing a thin cylinder after a period of hard use, it is often possible to note the *exact position of each rib* on the *inside of the bore*, showing that unless a radius is used the space between the ribs is insufficiently cooled, and expands to a greater degree than the ribbed portion.

(3.) It is evident that there must be sufficient metal in the base rib to conduct the heat to the vertical ribs if the latter are to be of any practical value.

(4.) If the ribs do not lie in line with the air current, the air will be deflected over the tips of the ribs, and will not reach the cylinder walls or rib roots; a tilt of only 15° is enough to cause this effect.

Faulty Piston Design

Faulty piston design is one of the most common causes of overheating and bad petrol consumption. Most frequently the fault lies in the use of insufficient metal behind the piston rings. Just as in cylinder design, it is most important to provide sufficient metal to conduct away the heat from the head. In the case of pistons, it must be remembered that oil and conduction to the cylinder walls through a film of oil are the only methods of cooling, and, consequently, the utmost use must be made of these rather inadequate methods.

FROM PARIS TO THE SPANISH BORDER.
B.S.A. riders, who formed the only British team, entered for the Paris-Pyrénées Trial, which finished last Saturday.

A FRENCH TRIAL ON BRITISH LINES.

Thirty Five-mile Circuits, taken Non-stop, weed out Many Competitors. Good Performances by British Machines.

THE first non-stop motor cycle reliability trial to be held in France, and for which the national body, the Union Motocycliste, made itself responsible, was a complete success. Forty-nine machines started, and thirty-three finished, of which seven only had clean scores. Because of this, certain French writers are disposed to find the competition too severe, and to claim that the first French non-stop was an athletic competition, a steeplechase — in fact, anything but a motor competition. The fact is that, compared with British standards, the event was not unusually severe, and, in view of the fact that all the riders were professionals with very long road experience, and came, or should have come, with machines in the very best mechanical condition, there was nothing at all in the trial to which objection can be taken. It is even to be hoped that when further events of this class are organised the difficulties will be gradually increased. For the first time French motor cyclists have been given an event in which it was impossible for everybody to be a winner, and as a consequence those writers who have become past masters in the art of excusing failures find nothing better than to blame the conditions.

The following are the results of the trials :

250 c.c.

		Marks Lost.
1.	Vernillet (Royal Enfield)	25
2.	Berger (Velocette)	59

350 c.c.

		Marks Lost.
1.	Bauer (Yvels)	10
2.	Denis (Diamond)	13
3.	Péan (Peugeot)	20

Barthelemy, on one of the clean score Nortons, climbing the test hill.

500 c.c.

		Marks lost.
1.	Naas (A.B.C.)	0
	Bastide (Norton)	0
	Barthelemy (Norton)	0
	Rolly (A.B.C.)	0
2.	Dard (Norton)	2
	Bernard (A.B.C.)	2
3.	Gabriel (Triumph)	8
4.	Borgotti (A.B.C.)	10
5.	Plateau (Norton)	18

750 c.c.

		Marks lost.
1.	Pinney (Triumph)	0
	Duverne (Saroléa)	1
2.	Duvanchelle (Triumph)	2
3.	Delabre (Rover)	10

Sidecars (1,000 c.c.)

1.	Cabet (Harley-Davidson)	0
2.	Oblin (Royal Enfield)	4
3.	Verlet (Harley-Davidson)	26

Graeme Fenton (A.J.S.) crossing a main road on to the narrow side track that led to the road shown above.

The Editor does not hold himself responsible for the opinions of his correspondents.

All letters must be addressed to the Editor, "The Motor Cycle," Hertford Street, Coventry, and must be accompanied by the writer's name and address.

THE WAY TO TILBURY FERRY.

Sir,—Might I warn all readers travelling in the vicinity of Tilbury that the signposting is disgraceful? There are several Tilburys, and the posts make no distinction. Would it not be advisable to mark up a road to "Tilbury Ferry," and so stop all the "humbugging about" on "pot-holey" roads? MISLED.

Ipswich.

CAMPING AND THE LAW.

Sir,—I note that Mr. J. Jameson, in your issue of *The Motor Cycle* dated April 28th, is rather doubtful as to the correct law regarding camping. With a view to spending a camping holiday myself, I recently interviewed a member of a well-known firm of tent manufacturers in Holborn. I was informed that camping on the roadside was permissible provided that a period of twenty-four hours was not exceeded. During that time no person could lawfully eject one.

HERBERT RICHARDSON.

AVOIDING CHOKED ACETYLENE BURNERS.

Sir,—Among the minor troubles of motor cyclists, there is nothing more annoying, and conducive to bad language, than the constant choking with dust of an acetylene lamp burner. It will be found that the rubber tip from a fountain pen filler will furnish an entirely satisfactory means of obviating this nuisance. The dust trouble, of course, disappears (theoretically) as soon as the lamps are lighted and a constant flow of gas is passing through the burners.

J. PECK.

A USEFUL MAGNETO TIP.

Sir,—On re-reading the accounts of last year's T.T. races I notice that more than one competitor was delayed by the breaking or pulling out of his magneto control wire. This can be obviated by a simple alteration which can be carried out on most magnetos in fifteen minutes, as follows: Fit the control so that the lever is at full advance position with a slack wire; this means transferring the lever to the opposite side of the contact breaker cover—the lever is nearly always attached by a screw and is easily movable. A hole must be tapped in the end plate of the magneto to take the Bowden wire stop block. Why manufacturers do not always send out their controls so adjusted is a mystery to me—as "full advance" is the most usual position—why, therefore, keep the wire continually at full stretch to get it? I invariably alter my own control and so do not have to worry with boot laces, etc., when the wire breaks. J. M. PHILPOTT.

SILENCE V. "MELLOW" NOISE.

Sir,—With reference to the correspondence on noisy motor cycles, it is not generally realised that safety lies in such machines. To give my own case.

My engine was very quiet as delivered by the makers, and as I use the machine chiefly for city riding (the streets here are very narrow with sharp turns and a double set of tramlines in the main streets), I found that the continual use of the horn was necessary, as the machine could not be heard coming. This meant that I had to drive through traffic controlling, practically, with one hand, to the *danger* of the public and myself.

To make a machine loud is objectionable, so I obtained a piece of copper pipe (the possessor of which is usually termed a "knut") and fitted it to the exhaust pipe. This gives a mellow sound which is not a nuisance, and enables the approach of the machine to be heard, with the result that I very rarely have to use the horn, and can have both hands free to control the machine, which means *safety* to the public and myself. DRAIN PIPE.

Norwich.

SIDECAR DRAG.

Sir,—On all sidecar machines I have ridden, I have found that, even when correctly aligned, there is a constant drag on the handle-bars or tendency for the front wheel to turn in one direction or the other according to the following conditions:

(1.) The position of the machine on the camber of the road.
(2.) Whether accelerating or retarding.
(3.) Whether climbing or descending a hill.
(4.) Whether turning corners right or left.

The effort required to counteract this varies with the different makes of machines, and one may say as a comparison that some outfits are heavier on the steering than others, assuming always that there is correct alignment.

I have seen it stated (I believe it was in *The Motor Cycle*) that the drag on the handle-bars when turning corners (see No. 4 above) may be greatly reduced by:

(1.) Using the engine when turning to the left.
(2.) Using the brake when turning to the right.

I do not know of any suggested solution to conditions Nos. 1, 2, and 3. What do experienced sidecarists do to overcome these effects? W. N. DYKE.

THE TEMPORARY ENGINE "SEIZURE" PROBLEM.

Sir,—Many readers of *The Motor Cycle* are apparently troubled with engine seizure, or apparent engine seizure.

I have had the same trouble myself on engines ranging from 3½ h.p. to 160 h.p.

If I am troubled with slowing up, I always suspect the plug. It may not be a faulty one, but the look of it tells one many things. Motor cyclists should remember that they have much more inside than a piston and a "conn. rod." Having had a look at the piston, and assuming it to be all right, I should suspect the timing gear. Nothing puts the brake on an engine better than a sticky timing gear. Take out the timing gear and drill vertical oil holes in the bushes, in position, in the timing gear cover. Make a point of drilling them as far back as possible, to allow oil to circulate at the blind end of the hole. They should be well countersunk at the top to catch oil in the vicinity.

These holes will, of course, act as air releases to their respective bushes, by allowing oil to be worked along from the other end. An extra washer behind the cover will prevent any undue pressure being exerted on the gear. Another air release fitted to the timing case will also be an advantage.

On several occasions, while testing large engines on the brake, they have suddenly dropped in "revs." and stopped very abruptly with a loud squeak. Immediately afterwards I was able to crank over by hand. The engine was put on threequarter throttle, and when it was commencing to lose "revs," a few smart turns on the timing cover bolts, to slacken off things inside, would cause it to pick up suddenly. The trouble was therefore located. It was nearly always a tight bush in the timing gear.

If such trifles as these can stop engines of 90 h.p. or so, surely we can expect the same troubles from our little engines of 500 c.c. MAURICE HOLROYD.

SIDECAR V. CYCLE CAR—COMPARATIVE PERFORMANCES.

Sir,—I see in your issue of April 14th that "Tyrconnell" requires particulars of personal experiences as to costs of running a sidecar and a cycle car of modern date. I give here experiences I have had with a 1920 big twin spring-framed sidecar outfit in fourteen months over 14,000 to 15,000 miles, and with a 1920 cycle car in six months over 6,000 miles.

PARTICULARS OF SIDECAR.

MILEAGE.—14,000 to 15,000.

REPLACEMENTS.—Nil, except bulbs which have burnt out, and two new plugs.

TYRES.—Never been punctured or removed, beyond changing the front tyre with the back at 8,000 miles. Good for 4,000 miles at least. The treads on the back and front tyres are equally worn. The sidecar tyre shows no apparent signs of wear whatever. The tyres on the machine are Goodyear, and on the sidecar a Hutchinson. Have travelled all over England between Brighton and Derby, and have covered some atrocious roads.

CHAINS.—No renewals. One breakage of a short chain. [Cause of breakage: Travelling at a very high rate of speed—over 50 m.p.h.—without sufficient lubrication.]

OIL CONSUMPTION.—700 to 800 m.p.g. approximately.

PETROL CONSUMPTION.—Maximum, with two up, 60 m.p.g.; usual, with two up, 55 m.p.g.; with three up, 50 m.p.g. With two or three up an average speed of 35 m.p.h. can be kept up comfortably on respectable roads on a good run.

SPARES.—On this machine spares are fairly expensive, taken on the whole.

PARTICULARS OF CYCLE CAR.

MILEAGE.—6,000 miles.

REPLACEMENTS.—Nil, except defective magneto and reverse gear, which were exchanged free of charge.

TYRES.—Michelin. Never been punctured. No perceptible wear whatever. Have been over very bad roads.

CHAINS.—No trouble at all.

OIL CONSUMPTION.—1,000 m.p.g. approximately.

PETROL CONSUMPTION.—Maximum, with two up, no freak jet setting, average speed 25 m.p.h., 80 m.p.g.; average, with two up, 60 to 65 m.p.g. An average of 35 m.p.h. can be kept up comfortably on a long run. I find I can keep up this average or even a higher one with more comfort and less fatigue than on the sidecar outfit. Also, the machine is weatherproof, and the fact that one can keep perfectly clean and dry is a great consideration.

SPARES (when necessary) are, on the whole, cheaper than with the sidecar.

Another great thing. The cycle car is twice or three times more accessible than the sidecar.

L.M.W.

Leicestershire.

Sir,—Will you permit me to reply to "Tyrconnell," who enquires for comparative details of cycle cars and sidecars?

What details I can supply are written from the standpoint of the touring, family-coach kind of driver. I am no longer very young, and my road experience goes back to the old cycle road-racing days, when the pneumatic tyre was something to stare at.

I have driven nearly every kind of motor cycle, including the tricars, and think I know the needs of the average driver pretty well. I have a model H Matchless sidecar outfit and a *modèle de luxe* Morgan. These are both 1920 models, and have just completed 5,000 miles on each. Having driven these with the same passenger, over the same roads, under practically the same conditions, I am able to compare performances. Both are very fine machines, the engines being practically identical. Prices: Matchless, with equipment, £232; Morgan, £233. Miles per gallon: Matchless 62; Morgan, 52. Miles per hour: Matchless, 45; Morgan, 49. Neither are racing outfits, and the speed taken is by the Watford speedometer over short level stretches of road. The average speed over a long trip of 100 miles or more shows a slight advantage in favour of the Morgan, owing to its faster hill-climbing and greater comfort over bad roads.

REPAIRS AND REPLACEMENTS.—The Matchless has never shed so much as a nut, nor has it cost a penny in repairs. The Morgan broke a gear fork early in its career, which was replaced free of charge.

ACCESSIBILITY.—The Matchless is certainly less easy to get at than the Morgan when adjustments are necessary. The presence of the sidecar and the chain cases alone account for this. The engine of the Morgan can be taken straight away from the front, but the Matchless is not so easy.

THE TERMINATION OF BUTTERTUBS PASS IN THE LONDON-EDINBURGH RUN.

The summit of Buttertubs leading into Swaledale—a scene characteristic of this hilly country. The sidecarist is descending the last steep stretch which will confront L.-E. competitors.

HILL-CLIMBING.—Both are good. Matchless gears are 4.65, 7.77, and 12.97 to 1; Morgan, 4.50 and 8 to 1—practically identical, but the Morgan will hang on to top gear in a marvellous way, and in the low gear will climb anywhere that the back wheel can get a grip. I must certainly give the Morgan the preference here.

FINISH.—The Matchless is certainly much better as regards finish. The sidecar body is a lovely piece of work. The Morgan body is good, but the details are rough.

COMFORT.—The passenger says that she does not notice much difference. I, as driver, notice a great deal. Well-sprung as the Matchless is, I find the Morgan far and away more comfortable, particularly at the end of a long run. There is not that wrist-weary feeling, and in winter, with a rug across my knees, I bless Mr. Morgan and all his works.

LUGGAGE ROOM.—The Matchless will take pretty nearly as much as a Ford, and an extra passenger. The Morgan has neither room for a spare petrol can nor a spare passenger. Luggage is not so well carried either, and jolts about more than when attached to the Matchless grid.

SOCIABILITY.—Here the Morgan scores heavily, and I cannot understand why youth is content to drive about with a yard of ironmongery between himself and his best girl when he can sit beside her in a Morgan at the same cost.

TYRES.—Neither machine is hard on tyres. The spring frame of the Matchless prevents the back wheel from bouncing, and there is a good deal of wear on a bouncing wheel if one did but realise it.

The Morgan is very heavily shod, and the 5,000 miles does not seem to have had any effect. Punctures: Matchless, three; Morgan, one (side wheel).

Honours would appear to be easy, and yet I would not exchange the Morgan for the best sidecar outfit on the road. I do not know what cycle cars "Ixion" refers to as a "weird variety" in his comparison with an A.J.S. I can assure him that the Morgan *is* substantial: it does *not* wobble, neither does any part flap and rattle. TICKER.

Midhurst.

LUBRICATION OF BOWDEN CABLES.

Sir,—Many thanks to "W.G.R." for his good tip on page 336 *re* the above. Its use on my carburetter controls has made driving a pleasure. I modified his method, using a foot of acetylene lamp tube as an oil reservoir, and an inflator to supply the motive power. Messy but most effective.

J. STUART-WHITE.

IDEAL TOOL-BOX POSITIONS.

Sir,—With reference to "Ixion's" comments on top tube tool boxes, I quite agree with him in his preference for the tank box, but the one on my 4 h.p. Blackburne is neither small, nor does it rattle. I can comfortably carry without undue packing a standard tool roll plus a double-ended B.S.A. spanner and an extra mag. spanner, spare plug in box, large repair outfit, a wooden plug case full of French chalk, several chain links and lamp burner, roll of copper wire, a box of matches, and on top a bulky Renold chain rivet extractor. The box is absolutely unlined except for a pad of rag between the lid and the chain punch. I have yet to hear the slightest rattle or thump from this tool box even over the worst roads. My only criticism is that it restricts the movement of the handle-bars somewhat.

I should very much like to know why the makers this year fit a pair of microscopic pannier tool cases to the carrier of their machines where they endure continuous concentrated vibration which, in my experience, is sufficient to cause a plug to pound the bottom out of its metal box despite careful cardboard and rag packing. E. A. L. PARKER.

FOUR-WHEELERS IN A.C.U. EVENTS.

Sir,—It is very seldom I disagree with the opinions expressed from time to time in your leaders, but I think you are doing the four-wheeled cycle car an injustice in a recent editorial column headed "Trial for Stock Machines." I think you will find that the real reason for the lack of four-wheeler entries is inability to comply with the conditions of entry. At least, this is so in my case, as my G.N., normally weighing over 8½ cwt., cannot be stripped to the 772 lb. limit imposed by the F.I.C.M. It takes me all my time to reduce the weight to 8 cwt. Had the weight limit been feasible I should most certainly have entered, and I think my case is exactly typical of all G.N. owners, and probably other four-wheeled cycle cars as well. I think you will have great difficulty in finding any four-wheelers that are eligible as the definition now stands.

I think you will find that the manufacturers of these vehicles would welcome the chance to compete with sidecars, and would suggest that you use your influence to obtain an alteration in the weight limit, which is admittedly too low.

It is of interest to note that in the recent Western Centre trial all the four-wheeled cycle cars finished and obtained awards. This makes an interesting comparison with the percentage of finishers in sidecar classes.

As I think your leader may cause those "invidious comparisons" you mention, I shall be glad if you will give publicity to this side of the question. Usual disclaimer.

H. OSWALD HAYES.

[When *The Motor Cycle* urged that the Auto Cycle Union should take over control of cycle cars, we put forward a definition of 1,100 c.c. engine capacity and 8 cwt. weight limit.—ED.]

LIGHTWEIGHTS AND THE TOURIST TROPHY RACE.

Sir,—The very fact that your excellent paper introduced and put up "*The Motor Cycle* Cup" for machines up to 250 c.c. prompts me to write you to continue your good work for the "little 'un."

In my opinion, the 250 c.c. class is just as important in its way to the lover of sport as the Junior and Senior Tourist Trophy. It is practically a certainty that the winner of the 250 c.c. class will be as fast this year as the best in 1914.

As the majority of motor cyclists know, I am not a lightweight rider; but what I should like to see is the same honour meted out to the 250 c.c. class as to the others.

I would even go so far as to suggest that "*The Motor Cycle* Cup" be renamed "*The Motor Cycle* Lightweight Tourist Trophy." It would then give the same amount of honour to the winner as in the other classes. At the present time this is not the case. H. BOYNTON.

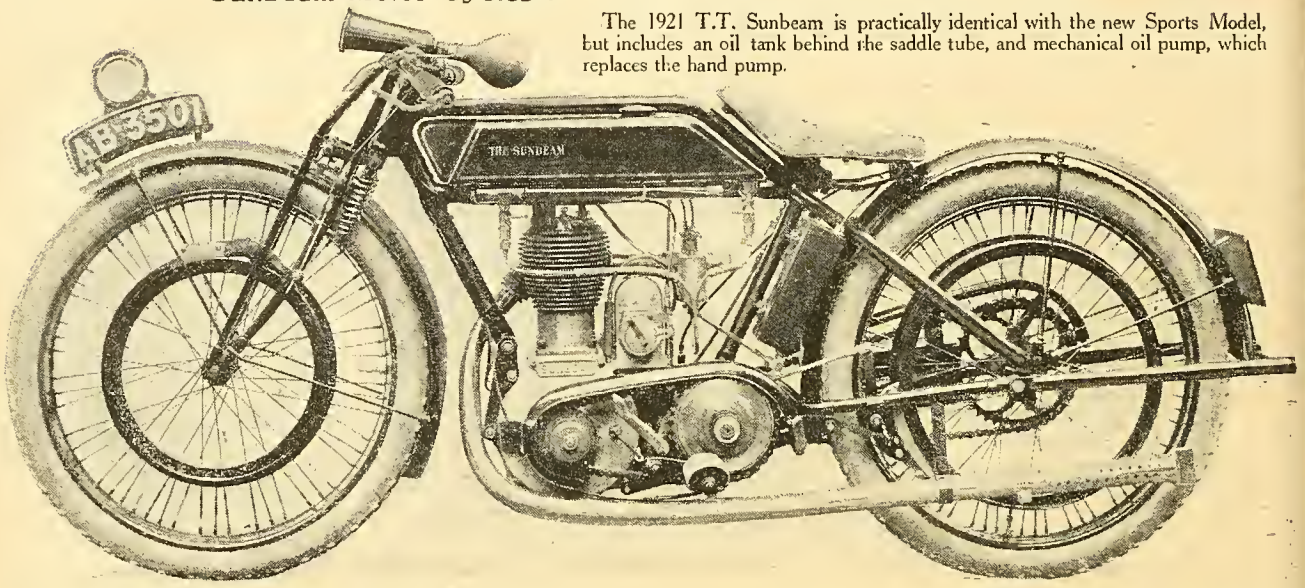
We submitted a copy of our correspondent's letter to the secretary of the A.C.U., who has replied as under:

"You are, of course, aware that the Competitions Committee of the Union has gratefully accepted your offer of a cup for the winner of the 250 c.c. class in the Junior T.T. race; but I feel sure that the suggestion put forward by your correspondent that this cup should be renamed '*The Motor Cycle* Lightweight Tourist Trophy' would not meet with general approval on account of probable confusion with the two classic trophies already in existence.

"At the moment there is no intention on the part of the committee to offer any trophies other than those presented by the Marquis de Mouzilly St. Mars, as it is felt that any addition to these must detract from their value.

"May I say that the Union has always encouraged the production of 'flyweight' motor cycles, and feels certain that a tremendous amount of appreciation will be accorded the winner of the 250 c.c. class in the Junior Tourist Trophy Race. "T. W. LOUGHBOROUGH, Secretary."

BOOKS AND MAPS FOR MOTOR CYCLISTS



Issued in conjunction with *The Motor Cycle*.

	Price net.	Book post.
"HINTS AND TIPS FOR MOTOR CYCLISTS." Containing over 400 useful "wrinkles" and helpful hints in regard to motor cycles. Seventh Edition	2/-	2/3
"TRACING MOTOR CYCLE TROUBLES." A system for tracing motor cycle faults and of remedying them when found. Fourth Edition ..	2/-	2/3
"MAGNETOS." By A. P. YOUNG. A complete treatise on magneto ignition for motor cars, motor cycles, and aeroplanes. Second Edition	4/6	4/10
"TWO-STROKE MOTOR CYCLES." A reliable treatise on Two-strokes, from the rider's point of view. Just published	3/-	3/3
"MOTOR CYCLE REMINISCENCES." By "IXION," of *The Motor Cycle*	5/-	5/4
"THE MOTOR CYCLE" ROAD MAPS, England and Wales, Scotland, London (showing roads into and out of London and avoiding London). Mounted on linen. Set of three, complete in case.	5/6	5/10
"THE MOTOR CYCLE" ROUTE BOOK. With 32 pages of Road Maps of England and Wales, Scotland, and the London District ..	5/-	5/4

Obtainable by post (remittance with order) from ILIFFE & SONS Ltd., 23, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.

A STANDARD ENGINE FOR THE T.T.

Sunbeam Motor Cycles for the Senior Race in the Isle of Man.

The 1921 T.T. Sunbeam is practically identical with the new Sports Model, but includes an oil tank behind the saddle tube, and mechanical oil pump, which replaces the hand pump.

CONSIDERABLE interest is already being manifested in 1921 T.T. machines. It is known that several very special engines are being prepared for the race; but, in contradistinction to these, at least two manufacturers will enter practically standard sports models.

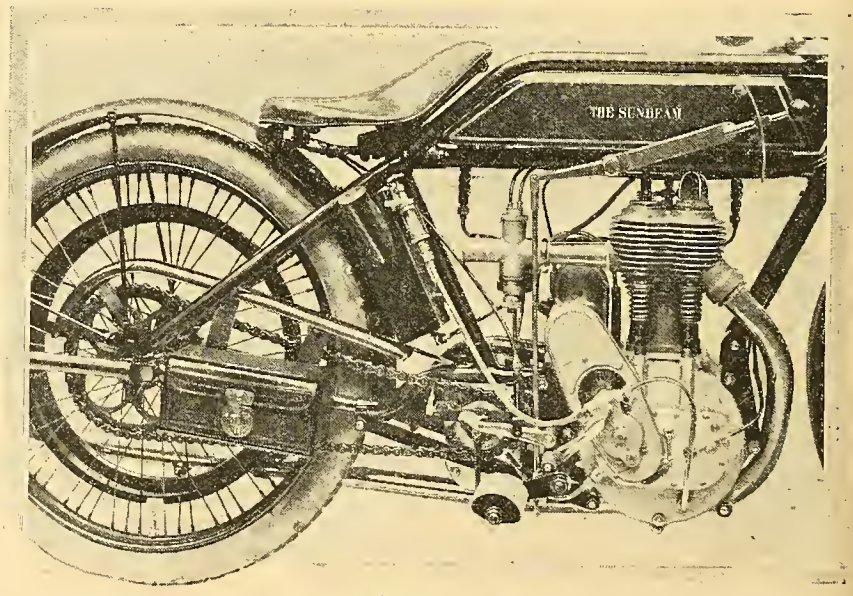
Of these the T.T. Sunbeam so closely resembles the new sports model as to be almost indistinguishable except for special lubrication arrangements, which will relieve the rider from worry during the race. These lubricating arrangements, however, are of some interest. A large oil tank is carried behind the saddle tube, and a mechanical plunger pump carried on the magneto chain case attends to the supply of oil to the engine. For emergency use, however, a heel-operated pump is fitted.

Closer Gear Ratios.

For racing purposes slightly closer ratios are employed in the gear box, and a larger tank is fitted. The gear box is carried rather high, and a flat steel stay is fitted from the lower part of the crank case to the chain stays on each side of the gear box.

Controls are of vital importance for such a severe test as the Tourist Trophy races, and every lever and pedal is arranged in the most convenient position—in fact, when we took T. C. de la Hay's machine for a short spin on the road we felt absolutely at home on the machine, and an extraordinary feeling of security was noticeable in spite of the machine being strange to us.

A semi-slipper aluminium piston is used, and long rollers are fitted in a bronze cage for the big end bearing.



Both front and rear brakes are of the belt rim type, and 26×2⅜in. tyres are employed. A somewhat unconventional position for the toolbag has been decided on, a large metal covered bag being carried on the right-hand chain stay. Both chains are covered by light guards over the top run, and both are lubricated by excess oil from the crank case, directed by pipes leading from the crank case relief valves.

Similar to Last Year's Winner.

We were particularly impressed by the thoroughly workmanlike manner in which the whole machine has been carried out, and since last year's winner is still one of the favourites for the coming event, it is interesting to know that he will ride a machine practically identical with his last year's mount. It is common knowledge that an overhead valve engine has appeared from the Sunbeam works, but the management prefer to rely on their standard machine, which is considered fully fast enough for the Isle of Man course, and which has been thoroughly tried out for more than a year past.

One further detail should perhaps be mentioned, for in all probability petrol-resisting rubber pipe will be employed in place of copper petrol pipes, and this will ensure absence from fracture in this vital point—a trouble which has been experienced by many in past I.O.M. events.

In the rest of its equipment, *i.e.*, such items as Sunbeam-Druid forks and Brooks racing saddle, the T.T. mount is obviously similar to the sports model.

Lubrication arrangements are clearly visible in this illustration. An auxiliary heel pedal is fitted in case of necessity. Observe also the unconventional position of the tool bag, and the special exhaust cap with vertical radiating fins.

QUESTIONS AND REPLIES

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 2d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects. **ROUTES.**—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

A TROUBLESOME HUB GEAR.

I have a 5-6 h.p. twin motor cycle which has an Armstrong three-speed and clutch hub, and recently I paid quite a large sum for repairs to the latter, and it was satisfactory for a while, but now the second gear will not work. Do you think it advisable to have the wheel repaired again?—W.J.V.

It seems to be largely a matter of deciding whether the machine is worth the expense of having the gear again overhauled. Hub gears are no longer made, and unless they are very carefully used they are scarcely suitable for high-power twin-cylinder machines used with sidecar. It may be, of course, that an adjustment only is required.

CLUTCH SLIP.

Having a 7 h.p. Indian and sidecar, I shall be pleased if you will advise me the best way to cure a slipping clutch, and also of adjusting the centre screws. Apparently, the fabric lining is quite good. I fitted a set of new springs without effect, especially when going up hills.—W.B.

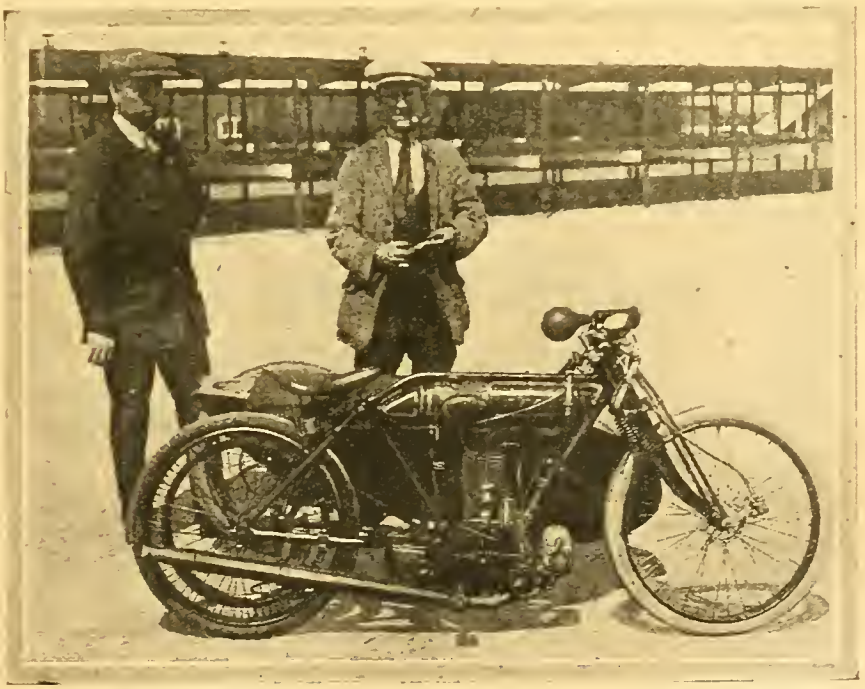
You do not give the date of your machine, therefore we are not quite sure what instructions to give you, as the machine varied considerably from year to year prior to 1918. If the clutch is slipping the centre screw should be slackened a half-turn at a time only until the clutch holds. Your best plan is to write to the makers, mentioning the date of the machine, as they will no doubt be able to supply you with a copy of their instruction booklet.

CONVERTING TO MAGNETO IGNITION.

I have got an old P.F. 45° twin engine about 5-6 h.p., which has accumulator ignition, and I wish to know (1) the correct way to convert it to the magneto ignition, and (2) the size of the magneto chain sprockets to use.—T.E.P.

A magneto suitable for 45° V-twin engine will be needed, and it must run in an anti-clockwise direction (looking at the spindle end). (1.) Remove the contact breaker from the half-time shaft of the timing gear and replace it with the magneto driving sprocket. (2.) The actual size of the sprockets is immaterial provided that they both have the same number of teeth.

ANGLE OF OLD V TWIN.



An old 1909 twin Rex which I have is minus the magneto. Can you tell me what degree magneto would suit it? I have a 50° Bosch magneto (anti-clock), but find this unsuitable.—W.H.M.

The angle of the cylinders of the 1909 twin Rex is 48°. However, a 50° magneto can be altered so as to be fairly satisfactory by grinding down 1° from the leading end of one of the cams in the contact breaker.

HIGH LEVEL AND LARGE JET.

I have a 6-7 h.p. B.S.A. fitted with an Amac carburetter and 32 jet. The compression is perfect when hot. At less than quarter throttle, with air lever wide open and ignition fully advanced (timing correct), I only get approximately 42 m.p.g. Recently I turned off the benzole supply while running, and noticed that when the float chamber had partly emptied the engine was running much faster, without missing, until just prior to exhausting fuel in the float chamber, with control levers in the same position as they were before turning off the supply at the tank. (1.) Is this caused by the size of jet or height of float—the float is of reversible type without means of adjustment—with top intake having a loose needle? (2.) Would you suggest a smaller jet or a variable jet adapter set to same size as at present, since I propose using a sidecar later? I just want to go at a comfortable pace.—J.P.

(1.) From the symptoms which you describe, the jet appears to be slightly too large, and the petrol level also might be reduced advantageously. The latter may be done by fitting a light washer between the top of the float and the collar on the needle. (2.) You might try the effect of a smaller jet (say a No. 30), or you could use a variable jet adapter, which, of course, allows you to experiment.

The Climax-engined New Comet which recently beat the 4 and 5 hours and 200 miles records for 350 c.c. machines with sidecars, with J. F. Newey, its designer, and driver.

READERS' REPLIES.

GEAR ADJUSTMENT.

Re "H.R.'s" query of gear slip. It seems to me that the adjustment necessary is on the gear lever; in all probability it is keyed on to the operating lever. By trying the lever for rock, when middle gear is out of mesh, he will find it will "give" a little, sufficient to allow the high or low gear dogs to slip out and burr. Tighten up, after re-keying, with a big spanner, until threads threaten to give. That is how I cured my own trouble on a 3½ h.p. Rover after endless efforts, both at garages and at home.—L.B.

EXPERIENCES WANTED.

"E.H.B." (Bedford).—Rudge-Multwin; petrol and oil consumption, comfort, stability on grease, reliability, etc.

"N.M.J." (Scarborough).—1920 Scott; best carburetter for milcage; jet size with standard Amac; most suitable sparking plug.

RECOMMENDED ROUTES.

BATH TO CHELMSFORD.—E.C.S.

Bath, Slough, Uxbridge, Ickenham, Ruislip, Eastcote, Pinner Green, Pinner and Hatch End Station, Bushey Heath, Elstree, Barnet Gate, Arkley, Barnet, Hadley Green, Hadley Church, Enfield, South Street (Ponders End), Chingford Marsh, Chingford Green, Woodford Green, Chelmsford. Approximately 148 miles.

DERBY TO CAMBRIDGE.—H.B.D.

Derby, Alvaston, Kegworth, Loughborough, Quorn, Mountsorrel, Leicester, Oadby, Great Glen, Kibworth, Market Harborough, Desborough, Rothwell, Kettering, Barton Seagrave, Cranford, Thrapston, Bythorn, Spaldwick, Ellington, Huntingdon, Godmanchester, Fenstanton, Cambridge. Approximately 96 miles.

Important Dates.

Fri., May 13th, and Sat., May 14th—M.C.C. London-Edinburgh Run.

Sat., May 21st—Western Centre A.C.U. Open Hill Climb.

Sat., May 28th—East Midland Centre A.C.U. Open Hill Climb.

Tues., June 14th—Junior T.T. Race

Thurs. June 16th—Senior T.T. Race.

Sat., June 18th—North-Western Centre A.C.U. Open Speed Trials.

Sat., June 25th—M.C.C. Inter-team Trial for "The Motor Cycle" Cup

Fri., July 1st, and Sat., July 2nd—Arbuthnot Trophy Trial.

Sat., July 2nd—Bournemouth M.C.C. Open Reliability Trial.

Sat. July 2nd—500 Mile Race at Brooklands for the Miller Gold Cup.

Thurs., July 7th—Essex County and Southend A.C. and Essex M.C. Joint Open Speed Trials.

Sat., July 9th—St. Andrews Speed Trials

Sat., July 9th—Cardiff M.C.C. and associated clubs Open Hill Climb.

Mon., July 11th, to Sat., July 16th—Scottish Six Days' Trial.

Sat., July 16th—Ilkley M.C. and L.C.C. Open Reliability Trial.

Sat., July 23rd—Fast Midland Centre A.C.U. Open Speed Trials.

Sun., July 24th—Motor Cycle Grand Prix Race in France.

Sat., July 30th—Newcastle and District M.C. Open Speed Trials.

Mon., Aug. 1st, to Sat., Aug. 6th—International Six Days Trial in Switzerland

Sat. Aug. 6th—North Wales M.C.C. Open Reliability Trial.

Mon., Aug. 29th, to Sat., Sept 3rd—A.C.U. Six Days Trial.

Sat., Sept. 17th—Grand Prix Race for Cycle Cars.

First off on the London-Holyhead run. A flashlight photograph of W. S. Boyer, on his 5-6 h.p. Rover, being started from Ealing on the Ealing club's recent 24 hour run. (See last issue)

SPARKLETS

Where so many Failed.

Owing to some confusion in competitors' numbers, we stated in our report of the Midland Centre A.C.U.'s open trial that A. G. Beesley (3½ Sunbeam sc.) was the sidecarist shown, at a standstill, in the background of one of our pictures illustrating the event. Actually, Beesley made a good climb of Knapp, the hill in question.

Runs for Unattached Riders.

A realisation that the popularity of the motor cycle movement as a whole will ultimately benefit the trader as an individual is no doubt behind the far-seeing policy of P. Pike and Co., Ltd., of Exeter. This firm is placing a room at the disposal of motor cyclists. As well as being a rendezvous, current literature will be provided. In addition, a number of afternoon and evening reliability runs open to any local motor cyclist are being arranged. Prizes will be given, and there are no entrance fees. The address is 174, Sidwell Street, Exeter.

A Locking Petrol Tap.

The petrol tap and lock which was described in our issue of January 27th as the Ceal, has been renamed the Steno, and is now sold by A. J. Dew and Co., 19a-21, Endell Street, Long Acre, London, W.C.2.

Catalogues Received.

Massey-Arran Motor Co., Ltd., Bell Barn Road, Birmingham: Details of the complete range of Massey-Arran machines. 2¾ h.p. Blackburne-engined sporting and touring models are illustrated, as well as the 2¾ h.p. single and 5 h.p. twin J.A.P.-engined types.

Enfield Cycle Co., Ltd., Redditch: Entitled "The Book of the Royal Enfield," the latest publication of the Enfield Co. contains copious instructions on the driving and management of the 8 h.p. sidecar outfit. A spare parts list is also included.

A. W. Gamage, Ltd., Holborn, London, E.C.1.: "Everything for the Motorist" is the title of a catalogue which is largely devoted to motor cycles and motor cycle accessories, all the best examples of which are illustrated, described, and priced.

Veloce, Ltd., Victoria Road, Six Ways, Aston Manor, Birmingham: One of the most noteworthy features of the Velocette is its mechanical lubrication, and the working parts of the system are shown clearly in the latest catalogue. Three models are listed—the two-speed, the three-speed, and the lady's model.

Burlington Motor Cycle Co., Ltd., 7, South Side, Clapham Common, London, S.W.4: A series of sidecars mounted on underslung chassis; the design appears to be sound and straightforward, and a wide choice of models and finish is offered.

Noisy Motor Cycles in Birmingham.

Birmingham possesses a very enthusiastic detective who is mounted on an old Triumph-O.H.8, and is very active in stopping motor cyclists whose machines he considers to be unduly noisy.

Banking of Road Bends.

In order to eliminate the risk of side slip at corners, and to reduce the excessive wear of road surfaces due to the uneven bearing of vehicles on present day cambered roads, the Roads Improvement Association is developing a scheme for the banking of bends; this should greatly increase the safety of all types of vehicles, and would be specially appreciated by motor cyclists.

An Enterprising Garage.

The North Road Garage and Motor Works at Gt. Ponton (three and a half miles south of Grantham) will be open all night on the occasion of the London-Edinburgh run. Petrol, benzole, oil, covers, tubes, and all accessories will be at the disposal of the competitors, and a large staff will be in attendance. Should any competitor need assistance in the district, there will be a box van and two touring cars in readiness.

Convalescent.

Graham W. Walker, the Norton rider who fell during the recent hill-climb at Axe Edge, is progressing quite favourably, and hopes to be in the saddle again in a few weeks' time.

Trying Out the T.T. Mounts.

On the Saturday immediately following the Whitsun holiday, the 21st inst., and less than four weeks before the T.T. races, there will be, in accordance with usual custom, two long distance races at Brooklands for genuine T.T. machines, *i.e.*, motor cycles fitted with variable gears as entered for the races in the Isle of Man. The occasion will be the second members' meeting of the B.M.C.R.C., and the capacity limits in these twenty-four and twenty-eight lap events will, of course, be 350 c.c. and 500 c.c. respectively. The Olai and Mellano Cups are the chief awards.

There will also be an unlimited three-lap scratch race for solo machines not exceeding 1,000 c.c., and a three-lap handicap for sidecars and cycle cars conforming to the F.I.C.M. definitions.

Is it because it is Spring Time?

Our postbag brings us many curious queries. One of the latest is from a reader who wants to know if we can tell him where cowslips can be gathered!

A Recovery.

The A.C.U. recently made a smart recovery of a stolen machine. The Head Office advised their guides of the machine's disappearance, and one of the road guides, in a locality distant from the place where the machine was taken, observed the machine and had the rider detained.

Rural Council Objects to Dye.

A sequel to the recent A.C.U. Trial was an emphatic protest at a meeting of the Godstone Rural District Council, when exception was taken to the use of public roads for the trial of motor cycles, and a committee has been appointed to take drastic action to deter this in future. Mr. J. Topham Brown, the district councillor who raised the protest, said that for long distances the roads were smeared with Reckitt's blue to mark the route to be taken by the competitors. It appeared to him in these days of turmoil and recklessness there was a disposition to make light of public rights. Mr. D. W. Lewis, another district councillor, said the District Council should demand a satisfactory explanation from the A.C.U.

Mr. F. Eagles, a Zenith rider, of Addlestone, who disappeared from his home on his machine in January last. His sister, Mrs. E. Beard, of 42, Albert Road, Addlestone, Surrey, wishes to learn his whereabouts. Mr. Eagles's machine is a 6 h.p. model, and bore the registration number P.A. 2,308.

Special Features.

TWENTY-ONE YEARS AGO!

GUIDE TO THE LONDON-EDINBURGH RUN.

Hill-climb in Yorkshire.

Entries for the Yorkshire Centre hill-climb on Otley East Chevin close on the 21st inst., one week before the event, which is being held on the 28th by the Harrogate and District M.C.C.

Sidecars and Cycle Cars Compared.

Worcester and District M.C.C. is showing another example of enterprise in the trial, which it is organising on Thursday, the 26th inst., in which sidecar outfits will run against three and four-wheeled cycle cars, light cars, and cars, the current list price of which does not exceed £500. Some interesting comparative data should be obtained, which is the aim of the event; and it is therefore hoped that a good entry will be secured. Entries, which are open to all members of the Western Centre A.C.U., must reach the hon. trial sec., Mr. Eric Williams, Lowesmoor, Worcester, by the 23rd inst.

Found.

From our letter-bag: "Found, on Sevenoaks Road, motor cycle tool kit.—Apply, Gravett, 19, Bartlett Road, Gravesend, giving particulars and date of loss."

Motor Cycles and Perfect Carburetters.

Professor Low, lecturing recently at Birmingham University, described a novel apparatus for the examination of mixture in the inlet pipe of a motor cycle engine, by means of which it was possible not only to detect the amount of liquid fuel in suspension, but in the case of two-stroke engines to distinguish between oil and petrol vapour particles.

He described how the destruction of an oil film due to incorrect mixture can lead to knocking of various kinds, and went on to discuss the modern system of carburation.

The lecturer expressed the view that the existence of many hundreds of carburetters proved the absence of perfection in any. He pointed out at the same time that motor cycling conditions do not demand perfect mixture, and that it is not always desirable to have a perfect mixture for an engine which is not necessarily always required to run on its most efficient speed.

In the case of hill-climbing, it might be necessary, for example, to use a slow burning inefficient mixture to obtain comfortable running.

London-Edinburgh Addendum.

The M.C.C. advises us that an addition to the list of competitors in the London-Edinburgh Run given on page 579 is A. P. McGowran (4 Triumph sc.), No. 230.

London-Edinburgh and the Coal Strike.

It was thought at one time that the fate of the London-Edinburgh Run hung in the balance owing to the coal strike, but the feeling of the Motor Cycling Club Committee is that since the Government has approved of horse-racing during this unfortunate period, there is no reason why this popular competition should be abandoned.

London-Edinburgh Hints.

We repeat several time-worn hints to competitors in this event, which may be of some service to novice riders. Alcohol is best avoided until the journey is over; competitors should remember to wind their watches at the start; it is especially necessary to see that lamps are in order; competitors riding with machines improperly illuminated will be severely dealt with by the committee; groups of riders of sidecar outfits of the same make are urgently requested not to ride together. This raises an abnormal amount of dust, and causes much annoyance to other people on the road.

And now a word to spectators. Spectators who watch the passing of the competitors by night are earnestly requested to point their lamps facing northwards, so as to avoid dazzling the riders.

London-Holyhead Awards.

Maude's Challenge Shield, the premier award in the London to Holyhead Trial, organised by the Ealing and District M.C.C., was won by A. W. Brittain on a Calthorpe car.

Gold medals in the motor cycle and three-wheeled cycle car classes went to W. G. Boyer (5-6 Rover), A. G. Battley (4 Triumph), P. Cunningham (3½ P. and M.), W. S. Jameson (3½ Sports Sunbeam), C. L. Sprosson (2½ Connaught), G. W. Shepherd (2¾ Beaumont), E. W. Spencer (4 Omega), G. E. Cuffe (2½ Metro-Tyler), S. T. Tessier (8 Bat sc.), H. Reed (8 Dot sc.), F. Spouse (10 T.B.), and H. F. S. Morgan (8 Morgan).

Silver medals were won by W. H. Spiller (2¾ Wooler), J. R. K. Knight (3½ Brough), F. W. Stevenson (3½ Brough), E. Foster (5-6 Raleigh), W. P. Brandon (4 Triumph), J. A. O'Sullivan (4 Harley-Davidson), T. O. M. Sopwith (2¾ Hawker), and A. K. Smith (7-9 Harley-Davidson sc).

S. A. Burington (7 A.J.S. sc.) gained a bronze medal.

No Double Fee for T.T. Entrants.

As we go to press we learn that in consequence of the industrial position the A.C.U. have decided to waive the double fee, and will accept entries at ordinary rates for the T.T. up to Monday next.

Fifty-mile Race on Pendine Sands.

Carmarthen and District M.C.C., and not the Cardiff club, is organising the Welsh speed championships at Pendine Sands on Whit-Monday. This event, to which we referred last week, includes a fifty-mile race, with the Norton Cup as the premier award.

New Coulson Models.

A new sports model Coulson is being placed on the market with the 2¾ h.p. J.A.P. engine, footrests instead of footboards, and with two-speed gear at 90 gs., and with three-speed gear at 6 gs. extra. The firm is also selling a Blackburne-engined Coulson sports model at 97 gs. with a two-speed gear, and 100 gs. with three-speed gear, and fitted with a slightly different tank.

The Five Hundred Miles Race.

Considerable interest is naturally being taken in the 500 miles race on July 2nd for the gold cup presented by Capt. A. G. Miller, which will be the longest race ever run on Brooklands Track.

The rules for this competition will be as simple and as free from vexations as possible, the winner being the motor cyclist in any class who, having driven personally during the whole period, has covered 500 miles in the shortest time. Any part of the motor bicycle may be renewed except a cylinder or the crank case, which parts will be sealed. Every entrant must nominate two lap-scoring assistants, one of whom will have to be on duty. An innovation will be the introduction of colours for each class. Class A riders will wear white sateen jackets, Class B riders will be in blue, Class C in yellow, Class D in green, and Class E in red.

Situated at the fork will be a series of standard replenishment huts, with a frontage of 6ft.×4ft. 6in. They will be boarded up 3in. high, above which will be wire netting to the roof. These huts will be hired to entrants, and an entrant may hire any number of them.

The Manx Steamers.

Owing to the coal strike there are only three steamers per week to the I.O.M.

The Arbuthnot Trophy.

This year the Arbuthnot Trophy Trial, which is open to officers serving in the Royal Navy, the Royal Naval Reserve, the Royal Naval Volunteer Reserve, and the Royal Marines, will be held on July 1st and 2nd. The district in which the trial will take place will be Kent and Surrey. A circular course has been selected, which will be covered three times on the Friday and once on the Saturday, the trial terminating at Brooklands Track in time to see the finish of the 500 miles race. There have been two Arbuthnot Trophy competitions, the first of which was won by Lieut. Evans Greaves, R.N., and the second by Lieut. G. P. Glen-Kidston, R.N.

The Travers Trophy Trial Results.

According to the results just published, but subject to confirmation by the A.C.U., the 2¼ h.p. Velocette, driven by G. Denley, wins the Travers Trophy in the Newcastle and District M.C. Open Trial on April 30th.

THE TRAVERS TROPHY AND £50 (presented by Messrs. Travers, Ltd., of Newcastle).—G. Denley (2¼ Velocette).

SPECIAL PRIZE (presented by the Lord Mayor of Newcastle, Councillor T. W. Rowe, for the best performance by a member of the Newcastle and Dist. M.C.).—W. H. Lindon-Travers (3½ Norton).

SPECIAL PRIZE for the best performance by private owner on a sidecar machine or three-wheeler.—W. Marriott (4 Norton sc.).

SPECIAL PRIZE for the best performance by private owner on formula in the hill-climb.—T. W. Toovey (3½ Norton sc.).

GOLD MEDALS.—H. R. Harveyson (4 Indian Scout), W. G. Harrison (2¼ Velocette), W. W. Chase (2¾ Coulson B.), Stanley Bell (3½ N.U.T.), R. S. Scoon (3½ N.U.T.), G. A. Strange (3½ James), J. Lidstone (2¼ James), G. Hill (3¾ Scott), A. R. Naylor (3½ Sunbeam), G. S. Davidson (2¼ Levis), J. W. Wilson (3½ Sunbeam), G. M. Townsend (3½ P. and M.), B. Kershaw (2¾ Verus), E. Hawkes (2¾ Excelsior), C. Webb (3½ Sunbeam), A. Dixon (3½ Rover), J. J. A. Dias (3½ Sunbeam), D. Robb (3½ N.U.T.), C. P. Wood (3¾ Scott), W. R. Haggas (4 Triumph), J. Joynson (6 Coventry Victor sc.), W. R. Brown (3½ Sunbeam sc.), L. Newey (6 Ariel sc.), J. Wainwright (10 T.B.), F. W. Giles (7 A.J.S. sc.), W. E. Grange (6 Bradbury sc.), S. Hall (Morgan), G. E. Stobart (7 James sc.), Mrs. Duncan Bell (7 A.J.S. sc.), J. Littlewood (7 A.J.S. sc.), F. J. Ellis (Matchless sc.), G. Nott (Matchless sc.), J. Walker (7 Indian sc.), J. Kish (4 Norton sc.), and J. Adams (5 Rover sc.).

SILVER MEDALS.—R. M. Wilson (2¾ Hobart), W. Walker (3 A.B.C.), and R. P. Reid (Morgan).

BRONZE MEDALS.—K. Dixon (3½ Sunbeam), W. Waller (3 A.B.C.), and R. P. Reid (Morgan). Norton sc.).

Keen interest was displayed both by competitors and spectators at the Neath and Ystalyfera M.C.C. Speed Trials, held in Margam Park last Saturday. The illustration depicts H. Lewis at speed on his Douglas.

PARIS-PYRENEES TRIAL.

Seventy-five per Cent. of the Competitors fail to Qualify for First-class Awards.

THE reliability trial from Paris to the Pyrenees and return, a distance of 1,205 miles covered in seven stages, attracted forty competitors. Undoubtedly the event was severe, and this was shown by the number of penalisations incurred, for the road from Paris to Bordeaux, although generally level, is not good, and the climbs in the mountains were trying for all. On three occasions the competitors had to ascend to more than 3,000ft. above sea level, and the highest point touched was 4,850ft. The basis of the competition was reliability, at the regulation speed of 30 kilometres (18⅝ miles) an hour.

Start from Versailles.

Starting from Paris, the route up to Versailles was not observed, and the official start was given in the ancient city of the Kings of France. The first day's run was to Poitiers, by way of Vendome, where a stop was made for lunch, and then through Tours.

Two of the competitors failed to arrive at the end of the 206-mile stage, these being Schelby, an amateur in the 350 c.c. class, and F. Turvey, one of the members of the B.S.A. team. Dubost, the rider of the two-stroke D.F.R. of his own construction, was in difficulties, and decided not to go beyond this stage. Three others were penalised for late arrival.

When Bordeaux was reached at the end of the second stage thirty-seven competitors were present, but the number of clean score men had been reduced. Roth, an amateur in the 750 c.c. solo class, fell near Poitiers, and, in addition to personal injuries, broke one of the springs of his front fork. He repaired and continued after losing an hour and a half. Fournier, on his own cycle car, took off a cylinder, made repairs, and then speeded after the group so fast that at the end of the day he had lost only seven points.

The south-west corner of France, between Bordeaux and Pau, is famous for its rough *pavé*, which was largely responsible for the reduction of the competitors to thirty-three, and for penalisations to several others. Sykes, one of the Sunbeam riders, had a rather bad spill near Belin, and had to be taken to hospital at Bayonne for medical attendance. Sexé, riding a 250 c.c. S.C., broke a rim, and, in falling, injured his knee. Boulangier, in the 350 c.c. class, suffered in the same way, and several others, among them L. L. Sealey of the B.S.A., were penalised on arrival at the midday halt. During the afternoon, Psalty, the Rover agent in Paris, who had a 500 c.c. solo machine, was obliged to abandon owing to mechanical trouble. Tisseraud also dropped out with his 250 c.c. S.C., the cause being magneto trouble. This left a total of thirty-three arrivals at Pau.

In the opinion of all, the mountain stage from Pau to Toulouse, a distance of 193 miles, was the most difficult of the entire competition. The Col d'Aspin had to be climbed in the morning, and the natural difficulties of this were so great that any time lost for mechanical causes entailed penalisations, while in the afternoon the Col de Peyresourde and the Col du Portet d'Aspet had to be tackled. Twenty-nine out of the thirty-two who started on this stage continued to the end, but large numbers of them lost marks for late arrival. Duverne, the rider of a Janoir sidecar, had a very bad spill when coming down the Col d'Aspin. Machine and riders went over a ravine, Duverne breaking his arm and his companion escaping without injury. Lombard on a G.N. broke a spring and retired, and Leveque on the Ruby cycle car dropped out of the competition. During the morning stage fourteen competitors were penalised, and several more lost points in the afternoon.

Few Clean Scores.

From Toulouse the machines doubled back to Bordeaux, where a public exhibition was held for one day, and from this town the return was made to Paris over the same route as for the outgoing journey. This stage was not very difficult, with the result that no further losses occurred, twenty-nine competitors checking in at the Wine City. At Bordeaux only ten men remained with clean scores, as follows: Chappez (Sunbeam); Pinney (Triumph); Labarre (—); Capt. Brass (B.S.A. sc.); Fontaine (B.S.A. sc.); Vuilliamy, Verlet, and Walbron (all on Harley-Davidsons); Bueno and Honel (on G.N. cycle cars). All the riders in the 250 c.c. class lost marks, these including Berger and Lezin on Velocettes.

SCOTTISH SIX DAYS TRIALS.

960 Miles: From Monday, July 11th, to July 16 h. Applecross included on the Fifth Day.

THE rules of the 1921 Scottish Trials are now announced, and do not appear to depart from the regulations of previous years; machines entered, however, must be genuine touring mounts with complete touring equipment and lamps. Cycle cars must have engines not exceeding 1,100 c.c., and a total unladen weight of 9 cwt. or less; while light cars under 1,500 c.c. capacity may also be entered.

Marking will be the same as in the previous Scottish Trials in the main, and the well-known system whereby each time-check stands by itself, so that time lost in one control cannot be regained in another, will be retained. No check will be less than one hour, however, and arrival times only are to be taken.

Test Hills.

There will be eight test hills as follows: Monday—Amulree; Tuesday—Ballochandrain; Wednesday—Dalnacardoch; Thursday—Abriachan, Glendoe, and Inverfarigaig Corkscrew; and Friday—Tornapress and Applecross.

The start is from Edinburgh on Monday, July 11th, and the average mileage per day is 165 miles. The route which has been selected for this year is as follows:

FIRST DAY. — Edinburgh, Stirling, Crieff, Amulree, Kenmore, Killin, Tyndrum, Dalmally, Oban. 150 miles approximately.

SECOND DAY. — Oban, Lochgilphead, Strachur, Leanach, Otter Ferry, Strachur, Inveraray, Dalmally, Oban. 170 miles approximately.

THIRD DAY.—Oban, Dalmally, Killin, Fearnan, Tummel Bridge, Dalnacardoch, Kingussie, Inverness. 160 miles approximately.

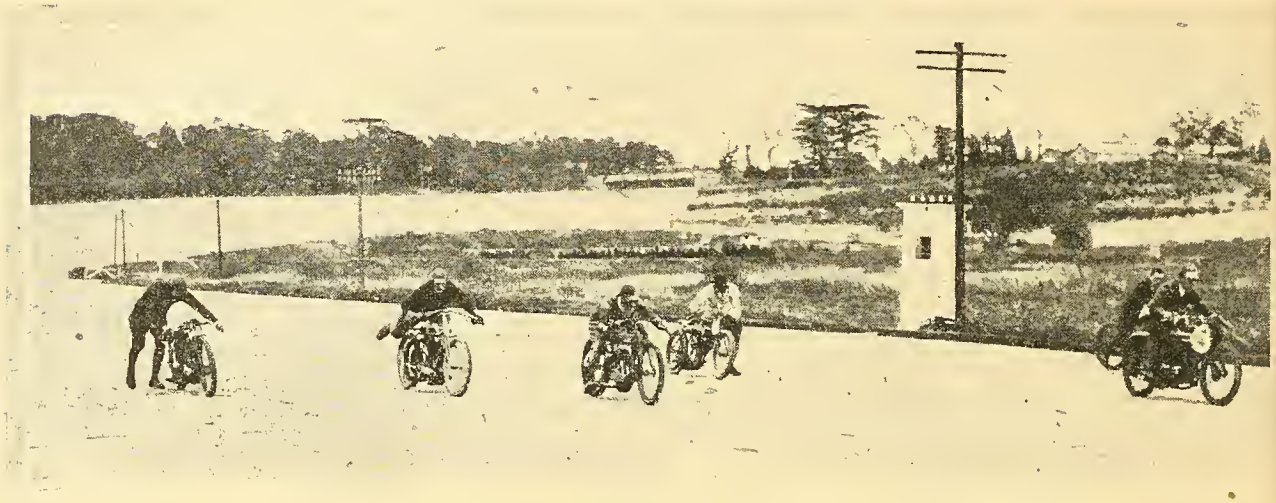
FOURTH DAY.—Inverness, Abriachan, Tomnacross, Invermoriston, Tomdown, Glendoe, Foyers, Inverfarigaig, Dores, Inverness. 120 miles approximately.

FIFTH DAY.—Inverness, Strathpeffer, Jeantown, Applecross, and return to Inverness. 180 miles approximately.

SIXTH DAY.—Inverness, Kingussie, Pitlochry, Aberfeldy, Crieff, Stirling, Edinburgh. 180 miles approximately.

Entries must reach the secretary, Mr. Campbell McGregor, 6, Castle Terrace, Edinburgh, before Monday, June 27th.

A NEW "WORST" HILL IN WALES.



THE "Screw Road" is the name of a hill in North Wales discovered by *The Motor Cycle*. On Saturday last about sixteen well-known competition riders gathered in the market place of Carnarvon, and were guided thence along devious byways.

On reaching the hill, a party examined the surface and the five hairpin bends. After a consultation it was decided that no machine should be allowed to descend the top hairpin without assistance, since a mistake might have ended in a serious fall over a precipitous bank.

The interesting part of the hill is about half a mile long, though the climb continues for over a mile. A loose surface, combined with acute hairpin bends and two sections of approximately 1 in 3, were the main features, but the steep, unprotected side caused more than one to take the worst surface rather than ride too near the edge. All the solo machines eventually made good climbs, and the little two-strokes shone in particular. Only one sidecar outfit made a clean ascent, and, considering the surface, this was a notable performance. Further particulars of this interesting event will be published in the next issue.

B.M.C.R.C. FIRST OPEN MEETING.

Good Racing in Four Spirited Events. Cycle Cars competing with Sidecars.

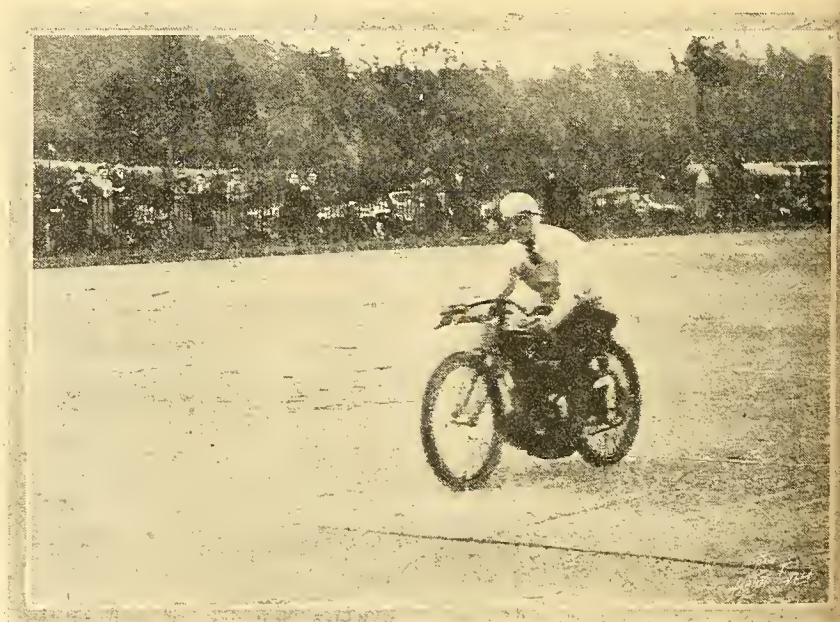
Start of the Two Miles Open Sprint on the railway straight. V. Horsman (Norton), on extreme left, was the last to get away. He won comfortably from Kaye Don on a sister machine.

LIGHT gusts of drizzly rain were blowing across Surrrey last Saturday afternoon, but the showers were never long enough or heavy enough to wet the track. Here and there a pool showed where a slab of concrete had sunk an inch or so, and helped the men to dodge a bump. Spectators were sent scurrying to cover on three or four occasions, but racing was not inferfered with in the slightest.

The five projected events were whittled down to four on the programme. As the cycle car race only attracted three Morgans and a G.N., these machines were put into the sidecar handicap.

B.M.C.R.C. meetings will not become spectacular until the new motor cycle paddock at the fork is complete, a consummation promised in time for the 500-mile race in July. At present the machines start far away on the distant horizon. The bulk of them are unrecognisable as they circle round the track in the middle distance. Here and there a particular rider may be identified by his friends with the aid of a brilliant vermilion or primrose sweater; but when perhaps a score of starters are contesting what is almost a three-lap race, and their handicaps range from three seconds to nearly three minutes the crowd get extremely fogged as to the progress of the event.

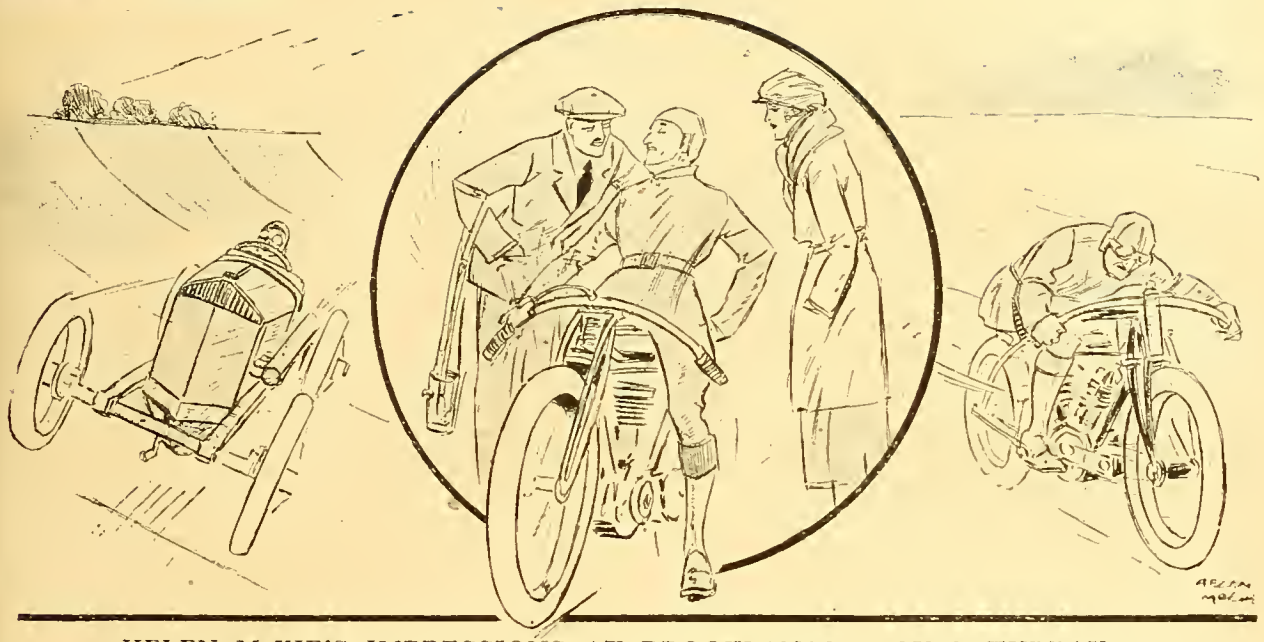
Between Start and Finish.



After the parade in the paddock, most visitors devote themselves to flirtation, gossip, bets, and the like until the bell announces that somebody is entering the finishing straight. All this will be altered when general headquarters are transferred to the fork. Spectators will then be able to watch the start, to see who is forging ahead on each lap, and generally to follow the details of the struggle, which, under the present *régime*, are never known in full to anybody, except that *rara avis*—a winner who starts from scratch and runs right through his field.

Saturday was once more a Norton day. Victor Horsman romped home with two firsts out of four races; and Kaye Don, that man of many mounts, was hard on his heels in the two-mile sprint. The J.A.P. people have no cause to be ashamed of their afternoon's work, for their engines propelled a variety of machines, which annexed one first, three seconds, and two thirds out of four events. The Wooler, which is still something of a newcomer at Brooklands, ran very prominently in the 350 c.c. event, finishing a good second to the speedy Diamond; and the remaining three prizes were carried off by American machines.

Bridgman's Indian did not need to flurry itself in winning the passenger event, and Davidson's Harley ran into third place, though he was giving the formidable start of 3m. 12s. to the limit man. Le Vack's Indian might possibly have finished higher than third in the big solo race if he had ventured to let it right out.



Absence of T.T. Machines.

There was a very noticeable absence of T.T. machines, and many firms who will be out for blood in the Island were unrepresented. None of the "hush-hush" engines, about which all the motor cycle world is whispering, were on view, and

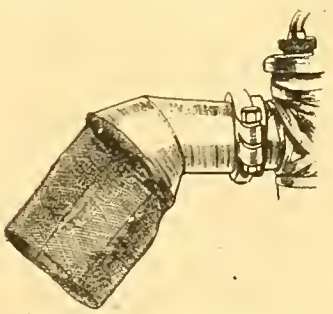
Kaye Don (2½ Diamond) winning the Junior Open Handicap of 8½ miles. His speed was over 63 m.p.h.

B.M.C.R.C. First Open Meeting.—

HELEN McKIE'S IMPRESSIONS AT BROOKLANDS LAST SATURDAY.

the racing was practically confined to old stagers whose form is fairly well exposed, and to young aspirants who have yet to earn a reputation.

Racing managers differ profoundly as to the wisdom of using Brooklands events as a trial canter for their T.T. mounts. Some experts consider that persistent hard work on the track is infinitely the most satisfactory method of trying out a spare T.T. engine or two. Others consider that it is bad for the *morale* of their T.T. riders to know that their engine is perhaps a shade less speedy than some of its rivals, and so prefer to divorce their preliminary tests from all public events.



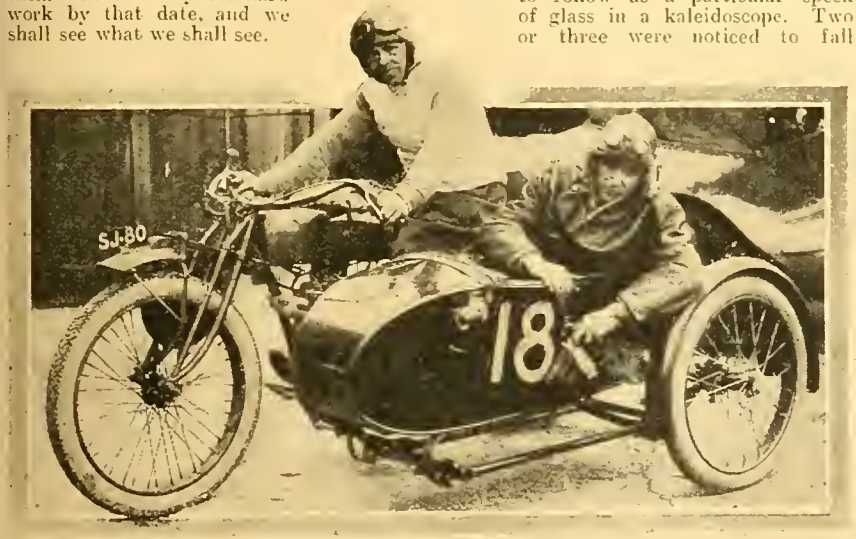
The programme of the next B.M.C.R.C. meeting on May 21st is specifically designed to attract T.T. machines; more of them will be ready for hard work by that date, and we shall see what we shall see.

Details of the racing on Saturday were as follows:

JUNIOR OPEN HANDICAP, not exceeding 350 c.c. 8½ Miles.

	Start. m. s.
A. A. Prestwich-Dot-Jap, 348 c.c.)	—
E. B. Ware (N.U.T.-Jap, 349 c.c.)	—
Tudor Thompson (Douglas, 350 c.c.)	15
T. Eve (Martin, 344 c.c.)	27
J. V. Prestwich (Diamond-Jap, 249 c.c.)	39
Kaye Don (Diamond, 249 c.c.)	39
E. Longden (Coulson-Jap, 348 c.c.)	51
H. Martin (Martin-Jap, 247 c.c.)	51
W. J. Lord (Hobart-Jap, 249 c.c.)	1 21
V. Longden (Coulson-B., 348 c.c.)	1 33
S. C. Hall (Douglas, 350 c.c.)	2 0
J. F. Hull (Wooler, 345 c.c.)	2 0
A. A. Swanu (New Imperial, 293 c.c.)	2 0

With over a dozen men starting at the fork, some of the limit men being rather slow and some of the cracks being very fast, the race was about as easy to follow as a particular speck of glass in a kaleidoscope. Two or three were noticed to fall out, of whom Martin appeared to have trouble with a chain, E. Longden with a tyre, and V. Longden with "drying up." Kaye Don's white sweater was conspicuously gaining on the limit men, with both the Prestwiches very fast. However, Hull's Wooler showed remarkable speed for a machine which had previously shone in the long distance "stamina" records rather in short sprints, and Don must have doubted his ability to catch Hull. After all, his engine was only a baby in competition with larger machines, but he achieved his end in the last lap.

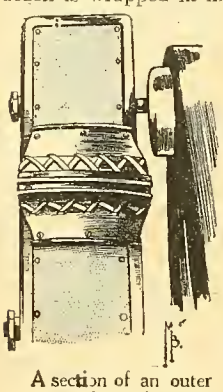


Air funnel, protected by a gauze cylinder, fitted to O. de Lissa's racing Motosacoche.

and ended up a comfortable winner by perhaps 75 yds. J. V. Prestwich hunted the Wooler home at a respectable interval, with A. A. Prestwich and S. C. Hall bringing up the rear. The rest of the field were easing up, and their placings were meaningless; but no other back markers seemed able to catch the long start men.

1. Kaye Don (Diamond) ..... 63¾ m.p.h.
2. J. F. Hull (Wooler) ..... —
3. J. V. Prestwich (Diamond-Jap) —

Car races organised by the Essex Motor Club were sandwiched between the motor cycle events, and lent a pleasant variety to the proceedings.



E. A. Bridgman, winner of the Sidecar and Cycle Car Open Handicap of 8½ miles on an Indian sidecar.

B.M.C.R.C. First Open Meeting—

SENIOR OPEN HANDICAP, exceeding 350 c.c. 8½ Miles.

	Start. m. s.
H. Le Vack (Indian, 994 c.c.)	—
D. H. Davidson (Harley, 989 c.c.)	3
C. F. Temple (Harley, 989 c.c.)	3
J. Woodhouse (Martin, 996 c.c.)	21
H. R. Harveyson (Indian, 998 c.c.)	27
Kaye Don (Zenith-Jap, 986 c.c.)	39
V. E. Horsman (Norton, 490 c.c.)	54
F. C. Townshend (Zenith, 988 c.c.)	1 24
T. Thompson (Douglas, 499 c.c.)	1 24
R. N. Stewart (Trump-Jap, 493 c.c.)	1 48
W. L. Gard (Norton, 490 c.c.)	2 9
F. A. Longman (Ariel, 498 c.c.)	2 36
R. Ayres (Rudge-Multi, 499 c.c.)	2 36

It was disappointing that thirteen out of twenty-six entrants failed to turn out for what should have made a most exciting race. W. H. Sinnett damaged the gear box of his A.B.C. on his way to the post, but the absence of the other dozen is wrapped in mystery. Rain had fallen since the first race, but the wind and sun had dried the track, and considerable surprise was expressed by the crowd at the frequency with which some of the big fellows were cutting out. Every time certain of the 7-9 h.p. twins went up the banking round the hill towards the members' bridge they cut out their engines repeatedly. Various explanations were offered by pseudo experts in the crowd—there were wet smears on the banking; the men thought they had been handicapped too severely; and so forth. The real explanation is that it requires considerable grit to hold a 1,000 c.c. machine at approximately 100 m.p.h. for a flying kilometre, and that the man does not live who can tackle the task for a whole lap of Brooklands in its present condition. If a man was funking or trying to hoodwink the handicappers, he would be more likely to close his throttle a trifle than to cut right out. The back markers were honestly trying to run through their field, and found they could not stand the strain of it.

A section of an outer cover used as a foot grip on a Motosacoche.

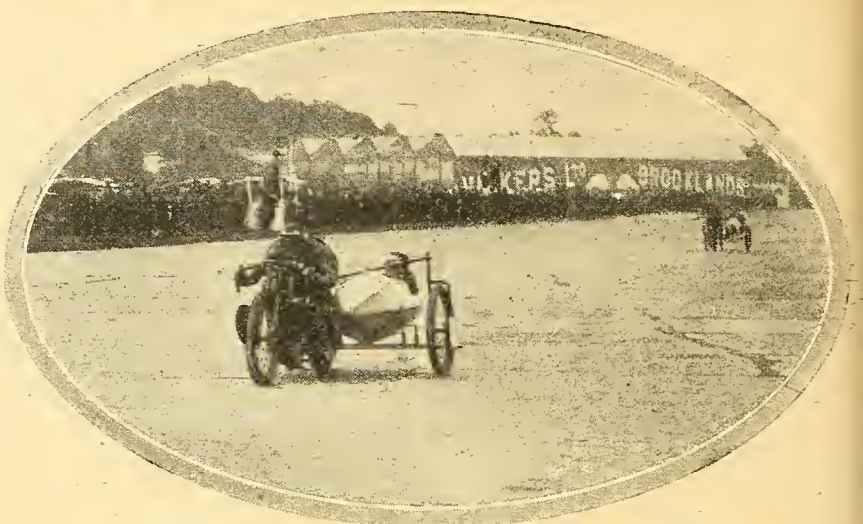
Single and Big Twin.

After the usual kaleidoscopic business for the first two laps, during which few of the public paid any attention to the racers, and even the observers with powerful glasses lost all touch with the race, Victor Horsman brought his Norton clean away, and won quite easily from Jack Woodhouse's Martin.

It was a fearsome sight to see the latter finish, for after passing the tape he seemed to be well off his saddle and riding on his wrists for most of the remainder of the straight. He says his machine sits the track well at speed, but bucks terribly when it is slowed. Le Vack had opened out enough to run right through the rest of the field into third place. Kaye Don and Harveyson roared past behind. Kaye Don had a great afternoon, and somehow manages to get a regular stud of different makes into top notch tune on the same day.

1. V. E. Horsman (Norton) .... 76½ m.p.h.
2. J. Woodhouse (Martin) .... —
3. H. Le Vack (Indian) .... —

The next event, as previously stated, saw a small entry of cycle cars compressed into the sidecar race, instead of being given a race to themselves, as had been planned. Sidecars were limited to 1,000 c.c. and cycle cars to 1,100 c.c.



SIDECAR AND CYCLE CAR OPEN HANDICAP. 8½ Miles.

	Start. m. s.
E. B. Ware (Morgan-Jap, 1,088 c.c.)	—
H. Le Vack (Indian sc., 998 c.c.)	33
D. H. Davidson (Harley sc., 989 c.c.)	33
O. de Lissa (Motosacoche sc., 994 c.c.)	54
S. E. Longman (Harley sc., 989 c.c.)	54
J. A. Masters (Harley sc., 989 c.c.)	54
J. A. O'Sullivan (Harley sc., 989 c.c.)	54
H. Jephson (Zenith-Jap sc., 986 c.c.)	54
W. D. Marchant (Zenith-Jap sc., 986 c.c.)	54
A. E. Moss (G.N., 1,087 c.c.)	54
V. E. Horsman (Norton sc., 498 c.c.)	1 18
R. Dequin (Zenith sc., 994 c.c.)	1 18
E. Longden (Morgan-Jap, 986 c.c.)	1 18
H. G. Cookson (Norton sc., 498 c.c.)	1 39
E. A. Bridgman (Indian sc., 998 c.c.)	2 12
D. Crawford (Zenith-Jap sc., 654 c.c.)	2 39
F. A. Longman (Ariel sc., 498 c.c.)	3 45

There is an old saying among betting men that the bigger the race, the bigger the certainty; and as the handicapping had gone seriously astray, the race presented a remarkably good thing for those in the know. Tudor Thompson stood down with some reason, for his 2¾ b.p. Douglas was only given 63s. start of Bridgman's big Indian outfit. Many visitors looked at the card, and spotted Bridgman as a good thing, seeing that he had 2m. 12s. start of Ware's Morgan, which was scratch. But seeing that Le Vack's Indian was only allotted 33s., they decided that Bridgman was riding a slow touring 'bus, and that grave danger threatened from an imposing quartette of Harleys. In the event Bridgman ran right away, and was probably never extended. Quite a lot of machines encountered trouble early in the event. Result:

1. E. A. Bridgman (Indian sc.) . 58¾ m.p.h.
2. W. D. Marchant (Zenith sc.) . —
3. D. H. Davidson (Harley sc.) —

The last motor cycle event was a two-mile scratch sprint from the railway start to the short finishing line, and created more genuine interest among the public than all the others, for the simple reason that it was possible to tell what was happening. The official programme did its best to cloud these simple conditions by inserting a column for handicaps and leaving it blank, and also by appending to a certain number the wrong man and the wrong machine. The bookmakers took a decided view of this race as soon as the numbers went up by laying 6 to 4 on Horsman and fours against Kaye Don, who now appeared on a Norton.

D. H. Davidson (Harley-Davidson)—the first man to attain 100 m.p.h. in this country—finishing third in the Sidecar and Cycle Car Handicap of 8½ miles.

TWO MILE OPEN SPRINT, not exceeding 500 c.c.

	Start. m. s.
V. E. Horsman (Norton, 498 c.c.)	—
R. N. Stewart (Trump-Jap, 493 c.c.)	—
W. L. Gard (Norton, 490 c.c.)	—
P. G. Kennedy (Norton, 490 c.c.)	—
T. Thompson (Douglas, 500 c.c.)	—
O. M. Baldwin (Martin, 496 c.c.)	—
Kaye Don (Norton, 490 c.c.)	—

Close finishes can hardly be hoped for in long races, when the scratch machines are capable of travelling nearly fifty yards per second. The crowd hoped for a tight struggle in this two-mile event. But the riders were plainly stringing out at the standing start, and when Horsman roared round the fork and came thundering home, he was probably twelve seconds ahead of Kaye Don, who in turn had little to fear from Baldwin.

1. V. E. Horsman (Norton) .... 68¾ m.p.h.
2. Kaye Don (Norton) .... —
3. O. M. Baldwin (Martin) .... —

A FLEET STREET CENSUS.

EVERY year for the past fifteen years our sister journal *Motor Transport* has taken a census of traffic in Fleet Street. This year's figures were given in last week's issue of that journal, and reveal that motor cycles are not used so extensively as they might be. Their numbers were: 5.07%, 7.08%, .89%, .60%, and .33% respectively for one April day in 1921, 1920, 1914, 1912, and 1907. There has been a drop of 2% this year, but the figures for the two post-war years show that the utilitarian value of the motor cycle is being recognised. This year's figures show that motor vehicles were 62.92%.

MOTOR TAXATION AND PETROL PRICES.

The Minister of Transport approached by the Leading Motoring Organisations.

A DEPUTATION organised by the Motor Legislation Committee, and representing the Automobile Association and Motor Union, the Society of Motor Manufacturers and Traders (Agents' Section), Motor Trade Association, Scottish Motor Trade Association, Association of British Motor Manufacturers, British Cycle and Motor Cycle Manufacturers' and Traders' Union, and the Auto Cycle Union, waited upon Sir Eric Geddes (Minister of Transport) on Thursday last, on the subject of taxation and petrol prices.

The deputation urged a reversion to a system of petrol duties as the basis of motor taxation on the grounds that it would restore the principle of payment proportionate to road use and render the incidence of payment less irksome than the present system. Facts and figures were presented in order to show that the new system of taxation has at least contributed materially to the present difficulties of the motor industry. It was pointed out that, on the basis of the petrol import figures of this year, a duty of fourpence or fivepence per gallon would produce the greater part of the revenue required for road purposes.

Petrol Prices Too High.

In regard to the price of petrol it was claimed that the consumer was not getting the benefit of the abolition of the petrol duties. Prices were much higher than they should be. The deputation urged that the question of the price of petrol could not be disassociated from that of taxation, and that this aspect of the problem should be considered seriously by the Government.

The Minister's Reply.

In reply to the points raised by the deputation, Sir Eric Geddes said he thonght it was rather early to make a change in the system of taxation. The experience they had had up to the present had, at any rate, not been long enough to enable them to reach a really definite opinion. He was afraid that in regard to the main question of petrol duties versus the present system of taxation he was as far from the deputation as ever.

If it were found, however, that the present scale of taxation produced a larger revenue than that shown in the estimates he hoped it would be possible to make reductions; whether the scale could be brought down next year he did not know; however, he hoped something might be done if the tax brought in an excess over the estimates.

In regard to the price of petrol he would consider whether a conference could not be called with the Board of Trade with the object of discussing the whole subject.

CLUB NEWS.

Surrey M.C.C.

The annual reliability trial for the Heath and Wiltshire Cup was held on Saturday over a course of eighty miles embracing Dorking, Guildford, Petworth, Chichester, and Farnham. The hills included Coast Hill (Dorking), Merrow Down, Bright Street (Guildford), Charterhouse Hairpin, Duncton, and Pitfold. About twenty members started in unfavourable weather, and six completed the course without a stop. Subject to confirmation by the committee, the winner is F. P. Verney (4 Triumph) with a total time-error of 30s.

Edinburgh and District M.C.

At the Edinburgh and District M.C. open hill-climb on Bavelaw Hill on Saturday there was an entry of forty-three individual riders, which it is claimed is a record for a hill-climb in Scotland. There was a very large crowd of spectators, and the event passed off without a hitch. Results:

CLASS 1.—W. Dickman (2¼ Levis).
CLASS 2.—W. Dickman (2¼ Levis).
CLASS 3.—W. H. Hunter (2¾ A.J.S.).
CLASS 4.—J. R. Alexander (2¾ Douglas).
CLASS 5.—W. Graham Black (3½ Norton).
CLASS 6.—A. H. Alexander (3½ Douglas).
CLASS 7.—W. Graham Black (3½ Norton).
CLASS 8.—D. S. Alexander (8 Indian).

Neath and Ystalyfera M.C.C.

Speed trials held at Margam Park on Saturday resulted as follows:

250 c.c. CLASS (Novice).—1, J. Cheshire (2½ Massy-Arran).
350 c.c. CLASS (Novice).—1, J. Cheshire (2½ Massy-Arran).
750 c.c. CLASS (Novice).—1, O. Lewis (3½ Norton); 2, J. Brachi (3½ Norton).
250 c.c. CLASS (Expert).—1, Jack Thomas (2½ Massy-Arran).
350 c.c. CLASS (Expert).—1, C. Sgonina (2¾ Verus).
500 c.c. CLASS (Expert).—1, C. Sgonina (3½ Norton); 2, A. Lindsay (3½ Norton).
750 c.c. CLASS (Expert).—1, A. Lindsay (3½ Norton), 2, C. Sgonina (3½ Norton).
1,000 c.c. CLASS (Expert).—1, A. Lindsay (3½ Norton), 2, C. Sgonina (3½ Norton).
CHAMPIONSHIP CLASS (Unlimited).—1, A. Lindsay (3½ Norton); 2, C. Sgonina (3½ Norton).
Fastest time of the day: A. Lindsay, 26⅗s. for half a mile.

Oxford M.C.

On Saturday, the Oxford M.C. held a successful climb at Kop. In spite of rain that had fallen during the week, and also while two of the classes were being run off, the hill was in very good condition. Fastest motor cycle time of the day was made by E. J. Cross, on a 7-9 h.p. Indian, to whom credit is due for the way in which he rode his machine, which was almost new and was fitted with long touring bars. His time was 48⅘s. A. D. Cruickshank also did well on his sports Norton, but he was not eligible for the amateur medal presented by Mr. Tollady, as he had not owned his Norton for four weeks previous to the event. N. V. Young, who was second on his 4 h.p. Triumph sidecar in the unlimited sidecar class, has only one arm, but rode magnificently. Results:

CLASS 1 (any motor cycle up to 280 c.c.).—1, J. W. Tolladay (2¼ Velocette), 58⅗s.*
CLASS 2 (any motor cycle up to 350 c.c.).—1, J. W. Tolladay (2¼ Velocette), 55⅘s.*
CLASS 3 (any motor cycle up to 600 c.c.).—1, A. D. Cruickshank (3½ Norton), 53⅗s.*; 2, J. W. Tolladay (2¼ Velocette), 54⅘s.†; 3, M. Pearson (4 Triumph), 54⅗s.; 4, L. A. Welch (4¼ B.S.A.), 1m. 5⅗s.‡
CLASS 4 (any motor cycle up to 1,000 c.c.).—1, E. J. Cross (7-9 Indian), 48⅘s.*; 2, A. D. Cruickshank (3½ Norton), 50⅗s.†; 3, E. J. S. Potter (8 Zenith), 53s.
CLASS 5 (any sidecar up to 600 c.c.).—1, M. Pearson (4 Triumph sc.), 1m. 17s.*; 2, N. V. Young (4 Triumph sc.), 1m. 20⅘s.†; 3, L. A. Welch (4¼ B.S.A. sc.), 1m. 34⅘s.‡
CLASS 6 (sidecars, unlimited).—1, J. G. Avery (7-9 Harley-Davidson sc.), 1m. 1⅗s.*; 2, N. V. Young (4 Trimmph sc.), 1m. 7s.†; 3, L. Avery (7-9 Harley-Davidson), 1m. 9⅗s.‡
Awards: *Fastest in class, club silver medal; ‡fastest amateur, silver medal; †bronze medal.

North-west London M.C.C.

An "optional route" trial held on Saturday, was somewhat of a novelty in the fact that five checks were selected in very hilly country in Surrey, strange to the competitors whose haunts lie more north of London. No route was laid down, but the schedule of 20 m.p.h. was taken over the shortest road marked on the ordnance map. Out of a large entry comprising cars, cycle cars, and motor cycles only, eight finished the course within thirty minutes of schedule. The route was officially fifty-four miles, and as one competitor's speedometer registered ninety odd miles some idea of the difficulties may be imagined. Motor cyclists gained over the cars on account of speed, acceleration, and handiness. Results:

1, J. D. Sangway (6 Zenith), total error 5½m.; 2, T. E. Moon (2¾ Douglas), 14½m.; 5, W. E. Phillip (6 A.J.S. sc.), 40m.; 6, H. D. Cuddeford (6 A.J.S.), 43m. (Cars were 3rd and 4th).

Luton and South Beds A.C.

Over a distance of 800 yards with a maximum gradient of 1 in 7, a hill-climb was held on Saturday on a private track in Haynes Park, lent by Mr. Sanderson. Heavy storms on an asphalted surface caused some bad times through belt slip. J. Hill (3½ Rudge) broke his piston in a solo class, but after fitting a new one won two sidecar classes. The special prize for fastest time was won by B. Wood (3½ Norton) at a speed of 59.71 m.p.h. Provisional results:

275 c.c. CLASS.—1, G. S. Davison (2¼ Levis), 35⅗s.; 2, G. Dunham (2¼ Velocette), 38⅖s.; 3, F. Biggs (2¼ New Hudson), 47⅖s.
350 c.c. CLASS.—1, G. Dunham (2¼ Velocette), 38⅘s.; 2, G. Davison (2¼ Levis), 40⅖s.; 3, F. Waters (2¾ Douglas), 41⅗s.
550 c.c. CLASS.—1, B. Wood (3½ Norton), 27⅘s.; 2, C. Smith (3½ Norton), 29s.; 3, G. Davison (2¼ Levis), 35⅗s.
750 c.c. CLASS.—1, B. Wood (3½ Norton), 28⅘s.; 2, C. Smith (3½ Norton), 29⅗s.; 3, A. Saddington (5-6 James), 30s.
ANY CAPACITY (Formula).—1, G. Dunham (2¼ Velocette); 2, B. Wood (3½ Norton); 3, C. Smith (3½ Norton).
LADIES' CLASS.—Miss D. Burley (2¾ Douglas), w.o.
SIDECARS (550 c.c., on Time).—J. C. Hill (3½ Rudge sc.), 46s.
SIDECARS (Unlimited, on Formula).—1, J. Hill (3½ Rudge sc.); 2, A. Sims (7-9 Harley-Davidson sc.).
CYCLE CARS (1,100 c.c.).—1, Godfrey (G.N.), 29s.; 2, M. Finch (G.N.), 35s.; F. Child (Morgan) and E. Buxton (Morgan), 46s., tied for third place.

Hastings M.C.C.

At a recent speed-judging contest, the best three performances were made by D. H. Mastin (3½ Norton sc.), who lost 18 points out of 100; L. Gladish (7-9 Indian sc.), who lost 32; and M. Goldsmith (3½ Zenith), who lost 44½.

Club News.—

West Kent M.C.

In conjunction with the Maidstone M.C.C., the club held an inter-club hill-climb on the 1st inst., when the previous fastest time (26s.) was beaten by several competitors. Results :

350 c.c.—1, G. Williams (2¾ Douglas), 32⅘s.; A. Jessop (2¾ New Imperial) and T. Ling (2¾ Douglas) tied for second place, 32⅘s.

500 c.c.—1, G. Maund (3 A.B.C.), 21⅘s.; 2, A. G. Williams (3½ Norton), 24⅗s.

600 c.c.—1, G. Maund (3 A.B.C.), 22⅗s.; 2, L. A. Maund (3½ Scott Squirrel), 25⅘s.

UNLIMITED.—1, G. Maund (3 A.B.C.) 21⅘s.; 2, J. Tweedie (7-9 Harley-Davidson), 25s.

Redditch and District M.C.C.

Full results of the recent hill-climb at Beoley, which attracted over one hundred entries, have now been announced :

TIME CLASSES.

FASTEST TIME OF THE DAY.—W. E. Smith (3½ Norton).

350 c.c. SOLO CLASS.—1, D. Prentice (2¾ New Imperial; 2, B. Kershaw (2¾ Verus); 3, G. Povey (2¼ Velocette).

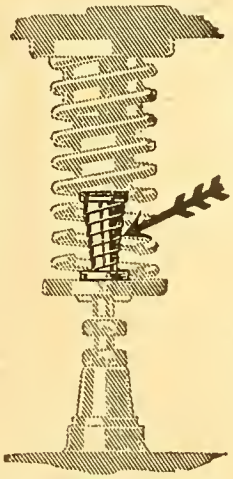
CLASS D (750 c.c. Solo).—*1, R. Fenn (T.T. Triumph), 15s.; 2, T. Wilkin (4 Norton), 16⅘s.

CLASS E (1,000 c.c. Solo).—1, R. Fenn (T.T. Triumph), 15⅘s.; 2, E. T. Elliott (4 Indian), 16s.

*Fastest time of the day.



ON THE WAY TO HOLYHEAD.

An A.J.S. rider checking at Dyffryn Castell during the Ealing club's recent trial from London through the most mountainous part of Wales.

"FLEXEKAS"

Patent Applied for — Reads

"My brother is riding a 1919 2¾ h.p. Douglas, to which he has lately fitted a set of FLEXEKAS. The improvement in the running of the machine is really remarkable: she will start in her own length in top gear and can be throttled down to six or seven miles per hour, still on high gear. We have not yet tested the petrol consumption fully, but there is an improvement in this also. Perhaps the biggest difference in running is the quietness of the entire valve mechanism. I enclose 10/- postal order for set of FLEXEKAS for my own machine."

An airtight flexible spring casing enclosing the valve stem and filled with special heat-proof graphite paste

2/6

EACH.

A notable advance in engine design which should be fitted to all motor cycles old and new

ECONOMY, EASY STARTING & SLOW RUNNING

Prevents your valve guides wearing, stops air leaks absolutely, and permanently quietens valve clatter, and enables you to obtain perfect carburation in each cylinder.

No packing used. Nothing to wear out. Refill with "Flexekas" Paste (carton 1s. 6d.) when you overhaul—this is all the attention necessary. State make and year of machine.

Obtainable through Garages or direct from the Patentee and Sole Manufacturer—

CLIFFORD PRESSLAND, A.M.I.E.E., Engineer, Hampton-on-Thames

For Young Men and Those who Feel Young

YOU know what it means to "feel at home" in your clothes don't you? You feel it the instant you slip into a "StyleCraft" jacket. Besides the actual measurements there is something about the "StyleCraft" cut that captures comfort. That and their value-for-money are what make "StyleCraft" garments so popular for free-and-easy wear in town and for leisure hours, sports wear, and holidays.

If any "StyleCraft" garment fails to give satisfaction we will replace it free through your dealer.

With these Generators be sure and fit the MOTEX Sidecar Lamp and MOTEX Rear Lamp.

STANLEY & HILL Ltd., Buckingham St., BIRMINGHAM

B.H.6.

The "Right Oils" Prevent Many Motoring Troubles.

The "right oils," rightly used, will practically eliminate the formation of carbon deposits—the cause of pre-ignition. The "right oils," judiciously used, prevent premature depreciation of the engine and other working parts. B.M.T. Oils are the "right oils"—right because they are the outcome of many years' experience and exhaustive study of lubricating problems.

Obtainable through all Motor Dealers, in five grades to cover the whole range of automobile lubrication.

Send for the B.M.T. Booklet and Price List, it will show you the right grade of oil to use for your motor cycle.

SHALER VULCANIZERS

MISCELLANEOUS ADVERTISEMENTS.

PRICES.

ADVERTISEMENTS in these columns —First 12 words 3/–, and 3d. for every ad- ditional word. Paragraphs of under 8 words re charged double rate. Each paragraph is harged separately. Name and address must e counted. Series discounts, conditions, and pecial terms to regular trade advertisers will e quoted on application.

Postal Orders and Cheques sent in payment for dvertisements should be made payable ILIFFE & SONS Ltd., and crossed & Co. reasury Notes, being untraceable if lost in ansit, should not be sent as remittances.

All advertisements in this section should be ccompanied with remittance, and be addressed the offices of "The Motor Cycle," 20, Tudor treet, London, E.C.4, or 19, Hertford Street, oventry. To ensure insertion letters should e posted in time to reach the offices of "The lotor Cycle," by the first post on Friday orning previous to the day of issue.

All letters relating to advertisements should uote the number which is printed at the end of ach advertisement, and the date of the issue which it appeared.

The proprietors are not responsible for clerical printers' errors, although every care is taken avoid mistakes.

NUMBERED ADDRESSES.

For the convenience of advertisers, letters may be ddressed to numbers at "The Motor Cycle" Office. hen this is desired, the sum of 6d. to defray the cost of gistration and to cover postage on replies must be added the advertisement charge, which must include the ords Box 000, c/o "The Motor Cycle." Only the number ill appear in the advertisement. All replies should be ddressed No. 000, c/o "Motor Cycle," 20, Tudor Street, .C.4. *Replies to Box Number advertisements containing mittances should be sent by registered post, but in all such ses it is advisable to make use of the Deposit System.*

In the case of motor cycles offered for sale under a box umber, as it is unusual for these to be sold without first eing inspected by the intending purchaser, advertisers will cilitate business by embodying in their advertisements me mention of the district in which the machine fered may be seen and tried.

DEPOSIT SYSTEM.

Persons who hesitate to send money to unknown persons ay deal in perfect safety by availing themselves of our eposit System. If the money be deposited with "The otor Cycle," both parties are advised of this receipt.

The time allowed for a decision after receipt of the oods is three days, and if a sale is effected we remit the mount to the seller, but, if not, we return the amount the depositor, and each party to the transaction pays arriage one way. For all transactions up to £10, a eposit fee of 1/- is charged; on transactions over £10 nd under £50, the fee is 2/6; over £50 and under £75, 5/-; ver £75 and under £100, 7/6; and on all transactions ver £100, ½%. All deposit matters are dealt with at , Tudor Street, London, E.C.4, and cheques and money rders should be made payable to Iliffe & Sons Limited.

The letter "D" at the end of an advertisement is an dication that the advertiser is willing to avail himself of he Deposit System. Other advertisers may be equally esirous, but have not advised us to that effect.

SPECIAL NOTE.

Readers who reply to advertisements and receive no nswer to their enquiries are requested to regard the lence as an indication that the goods advertised have ready been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to ach one by post.

ASK ALEXANDER'S ADVICE

In the selection of a suitable mount for your particular purpose, there are at least two important considerations:

1. **SUITABILITY.**
2. **PRICE.**

Do not scruple to trouble us, we are before you for that purpose, and every enquiry receives prompt personal attention, be it for a small spare part or a new motor cycle: that is

"ALEXANDER SERVICE."

If you are on the spot, we give free tuition to purchasers at any of our depots.

GREATEST BARGAIN OFFERED

Knowing that a large number of motor cyclists are keen on obtaining a thoroughly good machine, but do not care to pay for appearance, we have decided to offer the following W.D. Motor Cycles in the "rough."

They are 1916, 1917, and 1918 models complete in all essentials and will save many pounds to the purchasers who will do their own enamelling and make their own adjustments.

PHILIPSON'S

PATENT AUTOMATIC GOVERNOR

PULLEY

AND GEAR COMBINED.

Don't Scrap an old Engine,

but give it a

NEW LEASE OF LIFE

by fitting the

World-famed Philipson Pulley.

Entirely Free from troublesome and weighty complications—only two working parts—no levers, rods, wheels, etc., to worry about. Simply takes the place of the ordinary pulley. One nut secures the complete gear to the engine. Can be fitted without any alterations to most direct belt-driven engines in a few minutes.

For hill-climbing it is unsurpassed. Makes mountaineering easy.

IMMEDIATE DELIVERY.

Send for Illustrated Booklet.

Owing to a Printer's error in last week's issue, the price of the Philipson Pulley was given as £8-8-0. It should have been £7-7-0.

During the past few weeks the following machines have been fitted with PHILIPSON Pulley:

Triumph,	**Arno,**
Rover,	**Rex,**
Norton,	**B.S.A.,**

Repressive Legislation.

FEW motor cyclists who blame the motoring organisations for being inactive realise that the work of these bodies is none too easy. To blame them for not suggesting amendments to the new repressive legislation would be as unfair as it is untrue. They are always urging the powers that be to amend matters, but to induce the Government to act is a very different proposition.

Quite recently the secretary of the Auto Cycle Union met Sir Eric Geddes, and strongly took up the most recent anomaly in motor cycle legislation, namely, the fact that for taxation purposes a new and sensible weight limit had been imposed, while for purposes of registration the ridiculous old weight limit of 3 cwt., which many sidecar outfits exceed, has been retained.

Another point brought before the Ministry of Transport was the desirability of instituting quarterly licences for motor cycles, and it was suggested that these quarterly licences, if taken out, say, towards the end of the quarter, might be proportionately reduced.

In view of the fact that all the money necessary has been collected from motorists, and in view of the present trade depression, it was further put to the Minister that motor cycle taxes might well be reduced by 25%.

Petrol Prices.

The question of petrol prices was also brought to his notice, and since there had been a reduction in the prices of fuel oil and paraffin, to say nothing of the fall in the cost of freights, petrol, instead of going down, had been advanced by 20% since the removal of the tax.

As we stated last week, Sir Eric Geddes gave sympathetic consideration to most of the points brought to his notice, but he pointed out that the weight anomaly was retained to meet the desires of the police authorities. Whether or not the efforts of the Auto Cycle Union, which is represented on the Legislation Committee, and looks after the interests of motor cyclists on that body, will have any effect it is indeed hard to say; but if its efforts are not attended by success it will not be for want of lack of initiative.

The 250 c.c. Lightweights.

THE proposal of the Auto-Cycle Union to use the term "flyweight" to designate the 250 c.c. lightweights in the Tourist Trophy Race will not, we fancy, meet with the approval of the majority of motor cyclists. Such a word is neither dignified nor apt. The term "lightweight" is sufficiently expressive, and to coin another term for machines which are lighter than those recognised by the A.C.U. as lightweights is an admittance that the latter are no longer light.

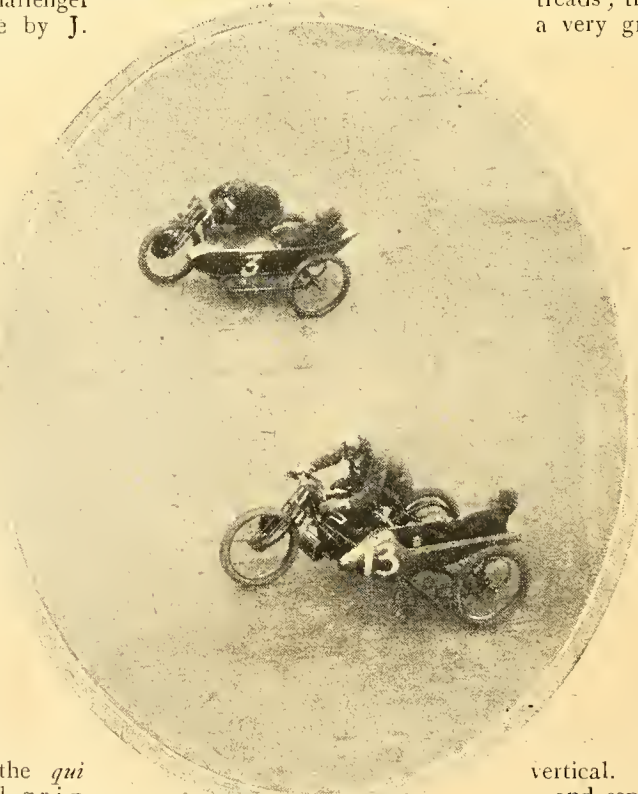
Since the machines it is proposed to term "flyweights" weigh approximately as much as the Senior mounts of a decade ago, it is to be hoped that future developments will produce motor cycles of a much reduced weight.

The terms "bantamweight," "ultra-lightweight," and even "motorcyclette" have all been tried, but not universally adopted. The plain fact is that "lightweight" is expressive of the lightest form of motor cycle, and immediately it is used to designate a type heavier than the lighter classes it becomes a misnomer.

We offer the suggestion that the 250 c.c. motor cycles in the Tourist Trophy Races be known as "lightweights," the 350 c.c. types as the "junior" class, and the 500 c.c. mounts as "senior" machines.

We trust that the A.C.U. will not persist in its proposal to utilise the term "flyweight," which at once suggests a lack of durability and of suitability for touring purposes, whereas the modern lightweight of the types encouraged by the 250 c.c. class in the T.T. has proved itself capable of withstanding hard usage.

An index to the advertisements in this issue will be found on the page facing the back cover.



Another Puncture Proof Tube.

TYRES still remain the Achilles heel of the motor cycle. If there were no such things as punctures, a moderately skilled rider on a machine of average quality could undertake any daylight journey without plotting any safety margin in time allowances. For this reason I am always ready to lend a hand to any anti-puncture novelty, though I have seen so many bloom and wither without solving our problems. The latest suggestion is the Challenger puncture sealing tube, made by J. P. Cochrane and Co., of Albert Street, Edinburgh. It is a red rubber tube with a thickness of approximately half an inch on the tread side. This thickened arc consists of a wad of spongy black mastic rubber, enclosed between inner and outer layers of red rubber. The wad expands to seal punctures. The tube is not appreciably more expensive than the ordinary type, and can be patched in the usual way in the event of a more than usually serious gash.

The "Compromise Cover."

IN the old days when a motor cycle had its centre of gravity as high as that of a camel conveying a load of coal, we were all on the *qui vive* for a tyre which would grip the road like a vice. Presently machines lowered their centre of gravity to a more reasonable level, but ere long the chain drive appeared; early examples were devoid of a shock absorber or cushioning device, and again we discussed tyre treads feverishly. When high, ill-balanced machines with snatchy drives made sideslip a frequent source of failure in competitions, I adopted one of three policies. Steel armoured treads made the job easier and safer than anything else. I have ridden through many a trial on the Michelin Semelle or Rom combination treads; the drawback was the risk of a very grievous dry skid in sudden brakework on a hard road. Second to the armoured treads in anti-skidding efficiency came such heavy scolloped all-rubber treads as the Kempshall, which had the further virtue of being all but unpuncturable, in the days when the average cover was far too thin and light for its job; such heavy tyres, blown up hard, seldom skidded, but they were apt to bump from sheer want of resilience. Later on, as machines grew steadier, most tyre manufacturers produced a compromise cover—thick enough to show a fair resistance to puncture, light enough to retain tolerable resilience, and sufficiently excavated on the tread to assist the rider in maintaining the vertical. The freak hill competition—and especially the clamorous needs of sidecars in such events—are creating a demand for a super-tyre calculated to grip grease on a

ON THE BANKING AT BROOKLANDS.
A tussle between Le Vack (No. 3), the 106 m.p.h. Indian exponent, and Dequin, the Zenith rider.

Occasional Comments.—

grade of 1 in 2. I do not personally believe that special tyres can be of much service under such conditions; and if some maker evolves a tyre which shall be the equivalent of a Parsons chain, it will be the worst tyre in the world for the ordinary user. The "compromise cover" cannot be beaten for every-day use.

Where Do You Carry Your Bulbs?

NO reference to horticulture is intended. Electric bulbs are the most indispensable of all spares, for if every garage carries a largish stock, the trade flourishes by refusing to standardise, and it is long odds against your finding the bulb which you want in stock. Since bulbs are perhaps the most fragile articles in creation (barring incandescent mantles and ladies' complexions), they are thoughtfully marketed in loosely rolled tubes of corrugated cardboard, twisted up in the flimsiest tissue paper. Two problems consequently confront the electrically-equipped motor cyclist, viz.:

(1.) What shall I pack my spare bulbs in?

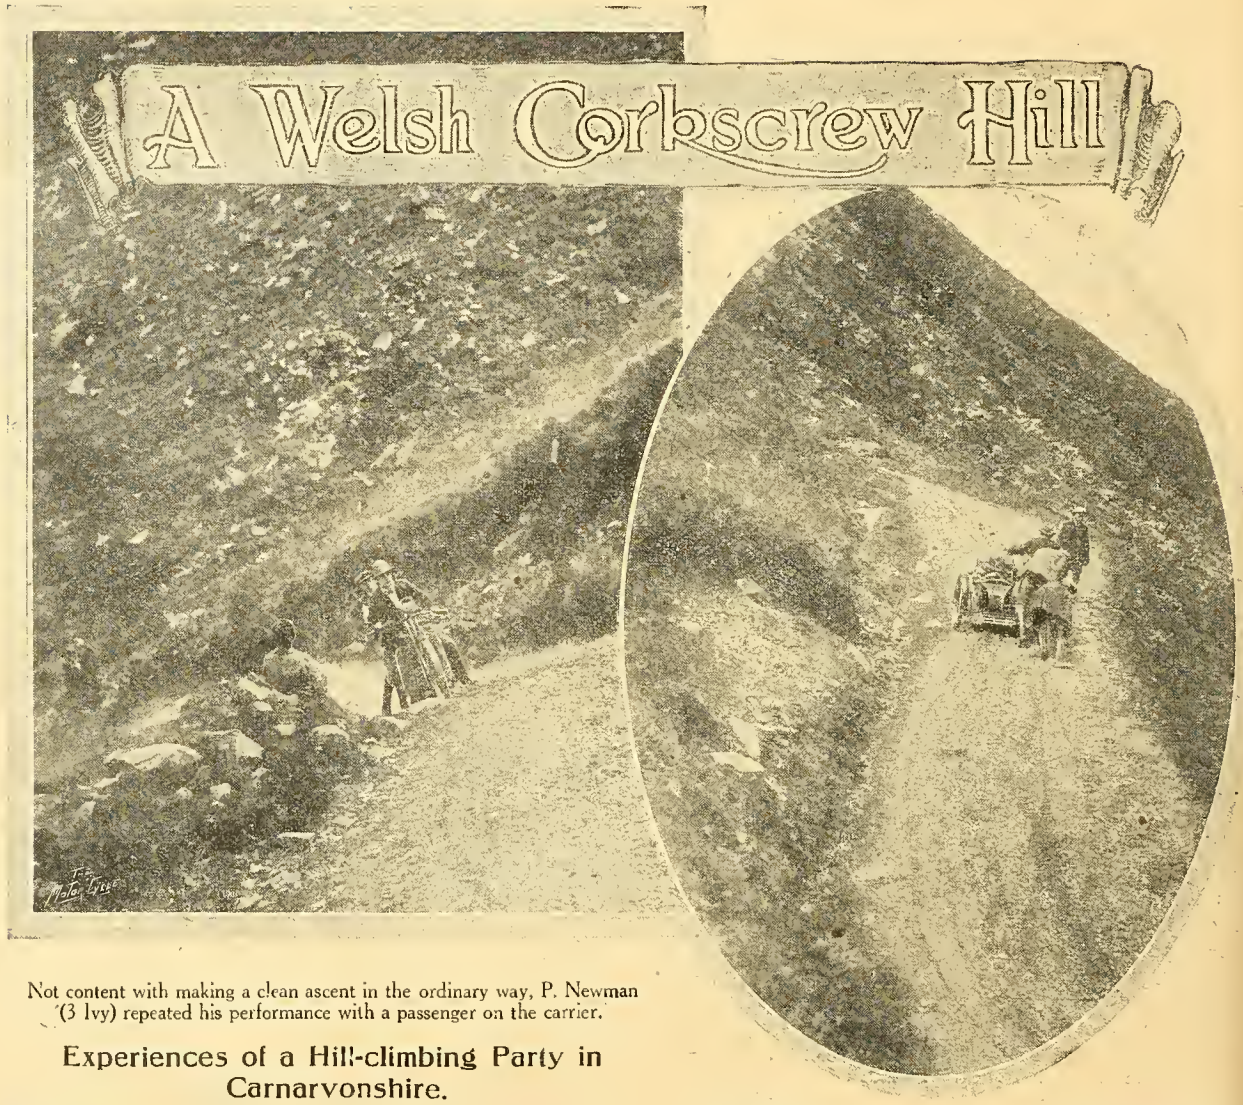
(2.) Where shall I carry them, when packed?

My own crude practice takes some such form as a shaving soap tin, well stuffed with wadding; but it makes a nasty lump in a pocket; and I appeal to readers in the hope that somebody can show me a more excellent way.

The Clean Cedos.

A BICYCLE which keeps clean always inspires its owner with incredulous joy. If one invests in a small two-stroke, and gradually learns that it does not leak lubricant at every pore, one is forced to admit that the age of miracles is not yet past. This spring a good deal of my pottering has been performed on a Cedos. I knew it would keep fairly clean so far as road dirt is concerned, for it possesses legshields and an undershield. Oil slinging is usually another matter. But after unlimited hard work it has yet to produce a solitary oil-stain on its person, barring one small disfigurement for which I am solely responsible. The only oil leakage of which this machine is ever guilty occurs when the needle valve of the drip feed is shut when there is oil under pressure in the spring-loaded pump. It is an excellent little bus in other respects, but in respect of cleanliness it is almost unique—the best made, best-designed four-strokes, irrespective of price, are no cleaner. No wonder the Cedos is a favourite with the ladies.

The Spare Tube.

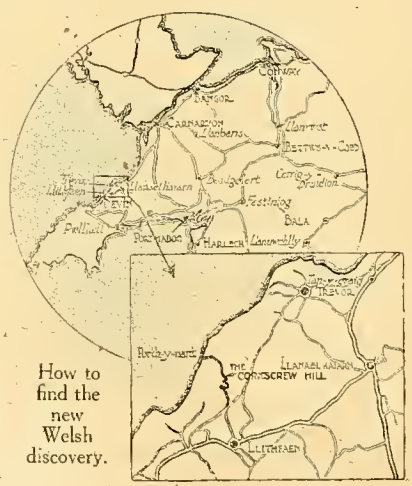


WITH tardy gratitude I beg to report that for the past year my last ditch in the way of tyre repair has consisted of a John Bull tube in a Cearns tube case. The latter consists of two aluminium cups, threaded on a central pillar bolted to the handle-bar or other convenient location. The tube has often been requisitioned, and has never been found frayed or damaged in any way. You can whip it out in a minute, and the best testimonial is that both tube and case are being retained in service for the 1921 competition season. My definition of a methodical man is one who packs up again neatly after he has changed a tube by the roadside. Honesty compels me to admit that the damaged tube has not infrequently reached home doing temporary service as a belt or a muffler; but that is just my impatience—it is quite a brief business to get a tube back into the Cearns case.

LITTON SLACK AGAIN!

This famous Derbyshire hill, which was included in the 1914 Six Days Trial, but ruled out in consequence of the many failures that occurred, has again been included in a big trial. Here are scenes in the North-western Centre Trial, which took place last week.

A Welsh Corkscrew Hill



Not content with making a clean ascent in the ordinary way, P. Newman (3 Ivy) repeated his performance with a passenger on the carrier.

The second hairpin, showing G. S. Arter (5-6 James sidecar) receiving assistance, and no wonder! Observe the gradient.

Experiences of a Hill-climbing Party in Carnarvonshire.

JUST before the war, a member of *The Motor Cycle* staff discovered a "new" hill in North Wales. A mental resolve that "some day" the hill-climbing enthusiasts should be introduced to its intricacies led to a party wending its way from the Midlands towards Carnarvon on Saturday, 7th instant. Its mission was to conquer a gradient which, report says, has never before been attempted by a motor cyclist.

The hill appears to rejoice in several names. The English-speaking Welsh postman calls it "the Screw Road," an Englishman resident in the district converts this to "the cork-screw," but the natives who have to trudge its gradients from the village below, in order to obtain the necessities of life, gave us another name in Welsh. How this is pronounced we will leave our Welsh readers to explain to those uninitiated in the ancient tongue of Wales. It is spelt Nant Gwyth Eyrn.

How to find the new Welsh discovery.

We are content to accept the postman's version and to name it "the Screw Road," for nothing in roads more like a screw has ever been graded.

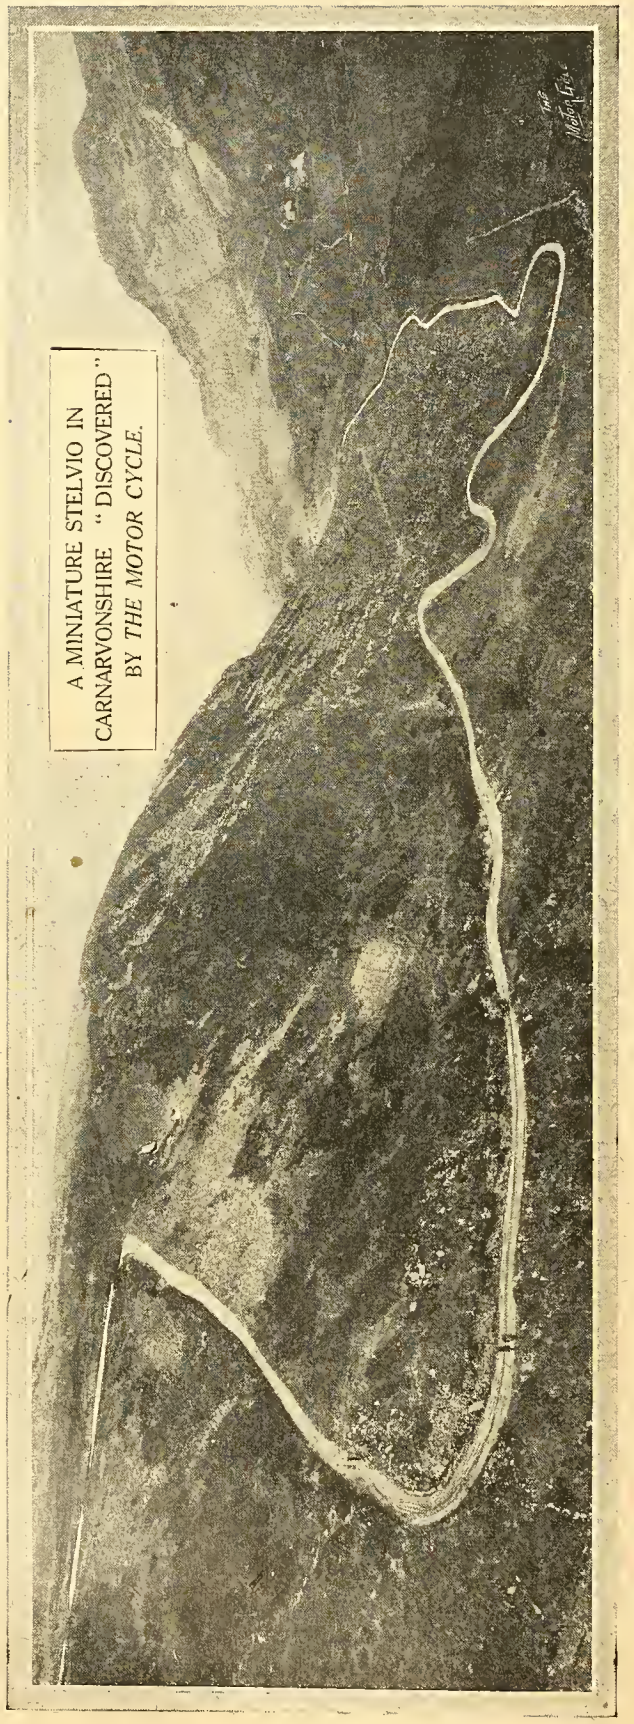
It lies on the north coast of Carnarvonshire, fifteen miles westward of the ancient town of Carnarvon, and creeps up from the sea hamlet of Porth-y-Nant (or Portnant as it is abbreviated for the convenience of the English tongue), through a deep valley on the westward flank of The Rivals, those two lofty peaks that rear their heads as outposts of the Snowdon range.

To reach it from Carnarvon one takes the coast road to Clynog—an

J. L. Norton was handicapped by too high a gear, but made a sporting attempt with his Norton sidecar. Here he is seen on the 1 in 7 gradient immediately preceding the last bad bend.

On the left is an impression of F. W. Giles, to whom fell the honour of being the only sidecarist to make a clean ascent with his passenger seated in the sidecar. His outfit was a 7 h.p. A.J.S.

ncidentally is treated to some very fine scenery *en route*, or on the one hand are the rolling mountains, and n the other a wide expanse of sea. At Llanaelhaiarn he right-hand road is taken to Llithfaen, in which llage it is necessary to turn sharp right up a some-hat steep gradient, at the top of which a road to the ght conducts one to the summit of one of The Rivals. o drivers of vehicles ever proceed straight on, for a tle beyond is the descent of the screw road.



A Word of Warning.

It will be noted that in order to climb this new hill he first has to descend it. There is not one of *The Motor Cycle* party but who agrees that the hill is easier climb than to descend.

We find it necessary to give a word of warning to any thusiast who desires to see "the Screw Road" for mself. Owing to the natural difficulties and dangers of the hill, on no account should the descent or ascent be attempted alone—in fact, a goodly party of assistants on several of the corners is absolutely necessary; they were provided on the occasion of the test we describe, and proved the necessity for such precautions.

One of the new sporting Beardmore-Precisions—A. G. Cocks up—on one of the last bends. He made a clean ascent, as did H. Greaves on a sister machine.

A MINIATURE STELVIO IN CARNARVONSHIRE "DISCOVERED" BY *THE MOTOR CYCLE*.

The Screw Road in Carnarvonshire, climbed by a motor cyclist for the first time on the 7th inst. It is not often that so fine a panorama of a hill is secured, which, at the same time, conveys a true impression of its difficulties.

The surface is mostly soft earth covered with a layer of shale, and the gradient in places is slightly worse than 1 in 3, easing off between the bends to about 1 in 8. There are five hairpins, and one side of most of them is a precipitous bank which, if there were no assistance available, would cause a nasty accident in the event of anyone sliding over or, on failing, running backwards. It is a veritable Stelvio in miniature. From the bottom to the top, the hill is nearly a mile in length, but interest is concentrated on the half mile which includes the hairpins.

Composition of the Hill-climbing Party.

Starting from the foot a right hand hairpin soon causes the lowest gear to be engaged, a minor turn to the left follows, and then two nasty corners, right and left, with a gradient of about 1 in 3 between them; there follows a comparatively straight stretch with a gradient of perhaps 1 in 8, steepening up to a narrow right hand hairpin which is immediately succeeded by the steepest pitch.

Fine weather favoured our attack on the hill, and at 9 a.m. a party of sixteen foregathered in Carnarvon Square. Excluding the two members of *The Motor Cycle* staff, the party consisted of the following riders:

G. S. Arter (5-6 James sc.).
F. H. Brown (2¾ Hobart-Jap).
W. Brandish, jun. (3½ Rover).
W. H. Carson (8 Excelsior sc.).
A. G. Cocks (Beardmore-Precision).
L. Crisp (4½ Humber).
G. Dance (3½ Sunbeam).
G. Denley (2¼ Velocette).
F. W. Giles (7 A.J.S. sc.).
H. Greaves (Beardmore-Precision).
P. Newman (3 Ivy).
J. L. Norton (4 Norton sc.).
M. F. Powney (4 Triumph).
A. E. Wood (4¼ B.S.A. sc.).

On arriving at the hill, the riders descended singly with several of their *confrères* hanging on to the rear carrier—a practice which must ultimately benefit several boot repairers. A party was stationed at the worst point, armed with ropes to render assistance, if needed, to those making the ascent, while another party was placed between the lower corners to save the vanquished from running backwards. Subsequent events proved the wisdom of these precautions. Scarcely was the organisation complete than two solo riders were off to contest the honour of being the first to climb the new hill. They had not, however, taken sufficient note of the condition on the corners, and their efforts were in vain. Unfamiliar hairpins of 1 in 3, visions of steep banks of rock and gorse, first on their right and then on their left, are sufficient to undermine the greatest skill—so they failed.

Lightweights for Mountaineering.

Not so, George Denley; with a healthy purr that echoed among the mountains, his little Velocette attacked the hill in splendid style. First one bend, then another was taken at a steady unbroken speed. Denley's legs were trailing ready in case the game little mount should make a dive for the edge. Twirling and twisting

IS THE WELSH SCREW ROAD THE MOST DIFFICULT HILL?

Apropos of our recent article on the most difficult hills in this country, the Screw Road, recently discovered by *The Motor Cycle*, easily takes first place. In a consensus of opinion, Alt-y-Bady was given as the most difficult. Those who have ascended both hills affirm that the Screw Road is the more severe test under dry conditions.

(Top) A typical stretch of the Screw Road. G. Denley (2¾ Velocette), the first motor cyclist to make a clean ascent. This new hill is seen in the foreground.

(Bottom) H. F. S. Morgan (8 Morgan) nearing the summit. He climbed well, but the surface on the last hairpin was too soft, and his rear wheel literally dug itself in.

A Welsh Corkscrew Hill.—

up that crooked pack-horse road he proved once again that the mechanical mount could go wherever its rider willed.

On passing the two less lucky ones, he had to take the outside of the third bend, but his engine never wavered, and he reached the summit—the first motor cyclist to climb the Screw Road.

A cheer burst out from the opposite side of the valley. The quarrymen had shown their appreciation of the spectacle which, to them at least, must be historic.

The clean ascent of the smallest machine in the party made the hill appear easy. Later on Denley made several more admirable ascents, but did not noticeably improve on his first effort.

It would appear that no machine is more suitable for climbing tricky hills than a light two-stroke geared suitably low, and the subsequent performances of the two Beardmore-Precision riders and P. Newman on the little Ivy fully confirmed this impression.

Testing a New Model.

H. Greaves and A. G. Cocks were mounted on the new Beardmore-Precision sporting mount, which has the 350 c.c. Precision engine, a Sturmey-Archer gear box, and the well-known Beardmore frame minus the rear springing. This new model is considerably lighter than the fully sprung type and comes into the light-weight category for taxation.

The attack on the Screw Road was a *début*, and very well the machine acquitted itself. Both Greaves and Cocks made faultless climbs, in fact the former ascended more than once, and no doubt Cocks would have repeated his success had he not taken off his coat and laid himself out to help the less fortunate. He specially deserves our thanks for the work he put in with such hearty goodwill, for help was wanted badly later on. In fact, everyone helped one another—and, we think, enjoyed the process.

Percy Newman and his Ivy once more demonstrated what a good two-stroke can do in the matter of overcoming difficulties of gradients, and those quarrymen were made to realise that their pet Screw Road had been conquered not only by the pluck and skill of British motor cyclists, but by representative productions from British motor cycle factories.

Incidentally, we may mention that opportunity was accorded to riders of American machines to join the party, but they were unable to do so. We wished to ascertain whether, after all, the types which are supposed to have been developed for the roughest countries could make a better performance than the various types of British machines.

That a large reserve of power was not entirely necessary to climb this hill was proved by the fact that the larger solo machines did not materially improve upon the ascents of the two-strokes. In fact, it seemed that the extra weight was a greater disadvantage than the power was an advantage, although it should be mentioned that George Dance's Sunbeam had sufficient in hand to allow him actually to change up between two of the bends. He made a beautiful climb, as was to be expected from one of England's finest riders of to-day. It is of interest to know that Dance rode up from Wolverhampton that morning and after the event returned the same day. He also found time to visit the local hostelry some miles away, and to return with liquid refreshment for overheated helpers.

W. Brandish was on a machine different from those we are accustomed to see him ride in competitions. His mount was a 3½ h.p. single-cylinder Rover. Usually, it is a mistake for a rider used to higher powers to ride a machine with a smaller engine for an event of this nature, but at his second attempt Brandish easily piloted his single to the summit.

A Spring Frame Mount Does Well.

Pseudo experts have been known to opine that a sprung frame motor cycle is far from ideal for rough riding on hills, but F. H. Brown proved that his spring frame Hobart was as steady as any of them. This machine, by the way, had one of the new 350 c.c. J.A.P. engines and on the fast ride up to Wales the larger solo mounts were not able to drop him far in the rear. His climb up the Screw Road was excellent.

Probably the heaviest solo machine present was L. Crisp's 4½ h.p. Humber, and it demonstrated that, if a machine is heavier than a lightweight, the even torque and balance of a flat twin have their advantages. His ascent was noticeably good.

M. F. Powney is a new member of the Triumph competition staff and promises well. His *début* in competitions was the Midland Centre A.C.U. Trial, a few weeks ago, and he came through with honours. He is also to ride in the T.T., and if his riding on the Screw Road is any criterion, more will be heard of him. He handled his Triumph as only those can who sit the same mount for the best part of each week. The healthy engine of his trusty Triumph carried him to the top without protest.

The last of the solo riders to be mentioned is *The Motor Cycle* representative, mounted on a Norton, who gave a demonstration of what may happen at any time while carburetter controls are not standardised. A change of carburetters a few days previously resulted in the controls working in the opposite way to that to which he was most accustomed; consequently, when driving became a matter of instinct he opened out when he should have closed his throttle. The error was only a momentary one, but sufficient to cause the driving wheel to spin, the good Norton to skid and the rider to "bite the dust." He restarted, however, and climbed the rest of the hill so comfortably that he was suspected of gathering material for leading articles on the standardisation of controls.

Only One Sidecar Succeeds.

Of the passenger machines, only F. W. Giles (7 A.J.S. sc.) made a clean ascent. His was the star performance of the day. He handled his machine dexterously, and was ably assisted by his Stepney Road Grip tyre. To take a sidecar up those gradients and round those acute hairpins was indeed something of which to be proud.

A. E. Wood (4¼ B.S.A. sc.) received considerable assistance. It was too much to expect a single with a sidecar to take those bends. H. F. S. Morgan (Morgan), with his wife as passenger, made a splendid ascent right up to the last corner, where his rear wheel became buried in the loose shale almost to the hub. More weight on the rear wheel would probably have saved the situation, since he had plenty of power in hand.

A Welsh Corkscrew Hill.—

G. S. Arter (5-6 James sc.) also failed with wheel slip, though his engine was emitting signals of distress. W. H. Carson (8 Excelsior sc.) also was unable to make a clean climb—surely this must be the first failure of this renowned hill-climber—and J. L. Norton (4 Norton sc.) made a sporting attempt with a heavy sidecar. The attempt failed, but since his machine was one of the few fitted with standard ratios, little surprise will be evinced.

Mr. Norton had the bad luck to break a magneto chain at his first attempt, and when restarting the front of the machine suddenly lifted and swung over the edge of the bank, the outfit resting on the crank case, and being held by three stalwart assistants. The rider was not in the least perturbed by this exciting incident, and after refitting the front cover, which was wrenched off the rim, he returned to the foot of the hill and had another try, though he failed low down on the hill.

Bwlch-y-Groes at 18 m.p.h.

This sporting rider then went straight off to Bwlch-y-Groes without touching the machine, and not only made a clean climb at about 18 m.p.h., but also made a clutch start on the worst pitch. (This serves as a comparison between the celebrated Bwlch-y-Groes and the Welsh Screw Road.)

Some further attempts were made. Newman, now familiar with the difficulties of the hill, actually succeeded in bringing up a passenger seated on the carrier of his Ivy, though there was a bit of a scramble at one hairpin in which it was not clear if the passenger gave assistance or merely got in the way. By all present the hill was considered to be the worst rideable road yet discovered, and not a few have vowed to return in order to wash out past defeats.

After the event, a few rode to the summit of The Rivals, to enjoy the magnificent panorama unfolded, and then the party broke up to return to their homes.

Alt-y-Bady takes Second Place.

Five Coventry riders, all mounted on solo machines, returned *via* Llangollen, and there sampled the famous Alt-y-Bady, which, being dry on that occasion, presented no very great difficulty to soloists, though it is no mean hill under any conditions.

Thus the Screw Road is proved to be much worse than Alt-y-Bady, and we hope that over ambitious trials organisers will not on any account take the plunge and include it in a trial, because of its dangers.

The smallest engined machine among the attacking party on the Screw Road was G. Denley's 2¼ h.p. Velocette, which was also the first to make a clean ascent.

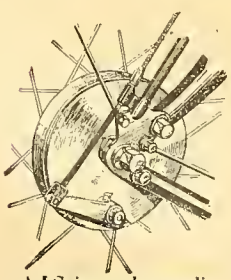
ADVICE TO INTENDING PATENTEES.

THE young engineer who is tempted to sink his small savings in patenting a brainwave should earnestly weigh Mr. Punch's counsel to persons intending to marry. The inventor of the kinema camera died the other day, a comparatively poor man. Three of the most popular items in up-to-date automobile practice are the vacuum fuel feed tank, the chassis spring gaiter, and the roller bearing conrod. At a modest estimate there are fifty valid patents on each of these three gadgets, and the original inventors cannot have reaped a rich harvest. Money occasionally rewards somebody who invents a simple gadget which is in general request; but in most cases the harvest is only reaped if he has a Machiavelli to draft his specifications, and a Rockefeller to frighten off rivals. I see in a contemporary that somebody is already infringing my patent golf ball, which squeaks until it is found; if I owned a master patent on that ball, I would sell it for £100 in preference to manufacturing it in competition. IXION.

The Performance of a Stock Machine

A SPORTING ONE DAY TRIAL.

AN invitation to act as passenger to H. R. Davies in an open trial dated back to the Olympia Motor Cycle Show. After many failures to find an event in which both rider and passenger were free to combine, arrangements were made to meet at Weybridge for the recent A.C.U. stock machine trial.



This proved to be a happy expedient, for the writer was able to combine his first experience as a trials passenger (in spite of many years as a trials reporter) with an opportunity of observing the performance of an absolutely standard A.J.S., as supplied to the agent.

Seven o'clock on a cold misty morning is not the most cheering moment at which to make one's first acquaintance with a brand new machine, nevertheless the authorities decreed that this should be the case, and after inspection and some formalities the machine was filled up in the paddock at Brooklands and solemnly pushed to the fork.

Getting into Running Trim.

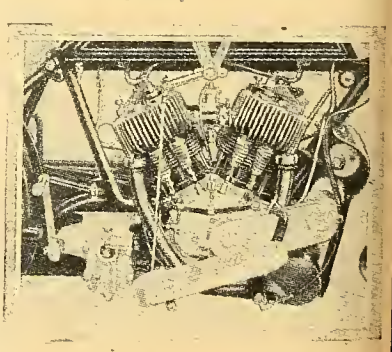
One hour was allowed in which to complete six laps of the track and do any tuning up, and after fitting the contact breaker—previously removed by the A.C.U. to prevent running in—the engine was started. This operation took but a moment, and we set out to see what sort of a mount we had drawn.

As is the case with nearly all high-class cars and motor cycles, the A.J.S. is sent out with very close fitting pistons, and owners are warned to drive easily for the first hundred miles or so; consequently it may be imagined that our preliminary laps were accomplished at a very moderate speed and with copious lubrication.

A.J.S. internal expanding brake.

A slight miss, probably due to condensation in the inlet pipe, was noticeable, but with the exception of a stop to check the action of the contact breaker, the six laps were accomplished uneventfully.

There remained some twenty-four minutes for tuning up, and if new owners would only observe the few simple operations which ensued they would save themselves much trouble later on. First of all the carburetter was dismantled and cleaned, next the plugs were examined and points adjusted a fraction wider. Contact breaker points were again examined. Tyres were pumped to the correct pressure, and chains examined to ascertain that the spring links were correctly fitted. With these simple precautions we took the road with the utmost confidence.



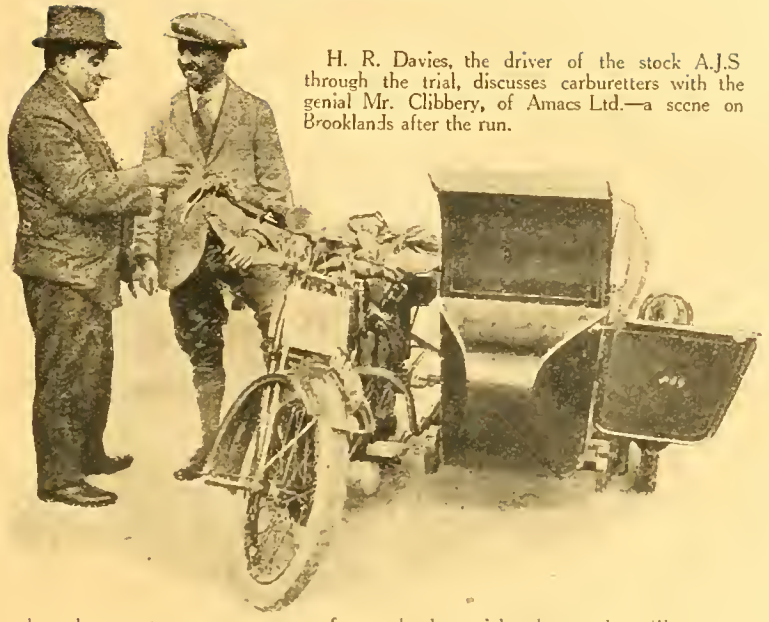
A PASSENGER'S IMPRESSIONS.

On Succombs Hill.

Since there was no serious hill within twenty miles of the start, and the average speed to be maintained was between 16 and 20 m.p.h., the engine had a chance of running in before the work of the day began.

Succombs was the first hill of note, and a momentary splutter when the throttle was opened caused low gear to be engaged for a few yards, but the crest of the hill was taken at speed on second gear. Thereafter the engine improved steadily, and the whole outfit behaved perfectly throughout the day. Second gear was sufficient for such hills as Polsteeple and Cudham, and the lunch stop was reached in schedule time.

Surrey lanes under a bright sun are always enjoyable, and in the comfortable A.J.S. sidecar we had leisure to enjoy the country and to listen to the even purr of the engine, which ran without a falter throughout. There were many cross-roads, and some steep hills to descend; but early in the day our driver had given us a convincing demonstration of the efficiency of A.J.S.



The 7 h.p. A.J.S. engine. This year the cubical capacity of this well tried engine was increased by 50 c.c.

internal expanding brakes, either of which was sufficient to pull up the machine in a few yards, while if both were employed at once the outfit could be brought up all standing without unpleasant shock and in an extraordinarily short distance.

Chalk Pit Hill and Pebblecombe were mere incidents, and the latter was easily surmounted on middle gear, but on approaching Brooklands we began to wonder if the fuel supply would hold out for twelve laps at an average of 35 m.p.h. in addition to the afternoon's run.

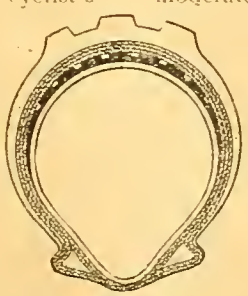
The uninitiated may consider such a thought unworthy, seeing that the tank held just over two gallons, and the total distance was but ninety miles; but to average 35 m.p.h. for thirty-six miles with a fully loaded and fully equipped sidecar requires a lot of fuel, and the consumption is bound to be greater than under road conditions.

H. R. Davies, the driver of the stock A.J.S through the trial, discusses carburetters with the genial Mr. Clibbery, of Amacs Ltd.—a scene on Brooklands after the run.

Once on the track, our driver opened up, and completed lap after lap at about 37 m.p.h. without any effort. The concluding lap was accomplished at a speed of 42 m.p.h., though there was still a little throttle in hand.

On reaching the Paddock, after qualifying for a first-class award, our first care was to look inside the tank. True to expectations, there was not much fuel in hand, but still we had finished, and the machine was undoubtedly running better at the end of the test than at the beginning. The only criticisms we have to make are that the seating accommodation of the sidecar is a trifle too vertical, and the screen seems a little too near the passenger's face.

THE PUNCTURE FIEND AT BAY.



The Bugbear of Tyre Trouble discussed by the Institution of Automobile Engineers.

THE first of a series of informal meetings of the Institution of Automobile Engineers at the Chamber of Commerce, New Street, Birmingham, at which were demonstrated many labour-saving devices in connection with pneumatic tyres, was upon the whole more interesting to car owners than to the motor cyclist.

Certainly the bugbear of tyre trouble is present to all users of that very excellent invention—the pneumatic tyre, but it is the heavier tyre as used on the larger type of vehicle that is most in need of special tools to aid in its detachment and replacement, or of special rims which shall enable a tyre to be fitted or removed without any undue straining of the fabric.

A Puncture-preventing Band.

A most interesting exhibit from a motor cyclist's point of view was the Hermetic puncture-proof band. This consists of an endless band shaped to the tyre, thickest in the centre, and tapering towards the edges, which is designed to be fitted between the tube and the outer cover. The band is entirely of rubber, and therefore very pliable; on its outer surface are round rubber studs, which under the force of inflation are compressed, and made to approach one another very nearly, leaving small air spaces between. The effect of this band is to turn aside any puncturing instrument that may find its way through the outer cover, thus protecting the inner tube. The bands are not subject to wear, and may be transferred from one cover to another. We saw one that had somewhere about a thousand miles service in the tyre of an Enfield sidecar outfit to its credit. It looked like new, but when it was removed for inspection two nails were found in the cover, each of which would have been quite sufficient to cause a puncture under ordinary conditions, with their points turned aside, so that no harm had been done.

The Hermetic band in its place between cover and tube.

Other Novelties.

A further claim made for this band is that it will prevent the cracking of the walls or tread of the cover when subject to much knocking about on bad roads. The weight of a band is 24 oz., and the price is moderate in view of the advantages gained.

Another item which we hope to try when occasion arises is a stick of rubber which becomes plastic with the heat of a match, and can then be kneaded into a cut in the outer cover and so prevent water from making its way into the tyre.

Some of the labour-saving inflators, worked by hand or foot, also might well find a place in the garage of the motor cyclist. There was one very neat pump, the D.A., which would be suitable for road use as well. This has the flexible connection contained in the barrel of the pump, and the first stroke shoots it into position.

A HILL-CLIMB ON BORE HILL.

Surbiton and District M.C.C.'s Twice Postponed Event Successful.

TWICE postponed owing to bad weather, the Surbiton and District M.C.C. hill-climb took place on the 11th inst., and, though rain fell before the start and after the finish, the actual competition was run off in fine if dull weather.

It is as well that the event did not take place on a Saturday, as Bore Hill, though not actually a main road, is one which is frequented at week-ends, as it leads on to Leith Hill, and is situated amongst the finest scenery in Surrey.

The road at the foot is narrow, and consequently its approach was somewhat congested with cars and motor cycles belonging to spectators and others. The course was a fairly long one, but the hill, the surface of which was good, was not steep (not more than 1 in 8), and had several bends awkward to take at speed.

Superb Riding.

The entry had been very good, but, owing to the double postponement, the number of starters was not numerous. The start took place half an hour behind schedule, chiefly owing to the failure of the field telephone. Fortunately, the timekeeper, Mr. A. G. Reynolds, brought with him an able colleague, Col. Edwards, who took the times at the start, the last man in each class bringing up the starting times of his fellow competitors. These were handed to Mr. Reynolds, who then passed them on to Mr. H. B. Uhde, who swiftly worked out the formula, so that results were available immediately after the event.

Kaye Don, with his stud of three mounts—an overhead valve Diamond, an 8 h.p. Zenith, and a Norton with Binks carburetter—made numerous sensational ascents. He rode superbly, barely cutting out on the corners. G. A. Vandervell (3½ Norton) was even slightly better. His cornering was magnificent, and he rode as if he and his mount were one. He never cut out for a single bend of the course. To him is due the honour of making the fastest time of the day: 35⅕s.

W. Julian's Levis did good work in the lightweight class; while Green (Norton), Dequin (Zenith-M.A.G.), and Le Vack (Indian) created great interest.

The different styles of riding displayed by the various riders were distinctly amusing. Julian's habit was to be pushed off on his single-geared Levis, and to ride on the off side footrest until he found the correct mixture. He then threw his leg across the saddle, and settled down to the rest of the climb.

Green's Norton accelerated in wonderful style, and the angle at which he carried his near side foot rendered him recognisable long before his number was legible.

Guy's Coulson-B did well, but seemed somewhat highly geared for the course.

The following are the results:

CLASS A (General 350 c.c.).

TIME.—1, W. Julian (2¼ Levis), 51⅕s.; 2, H. Guy (2¾ Coulson B), 1m. 2⅘s.; 3, J. Callebaut (2¾ Douglas), 1m. 4s. Formula results give the same places.

CLASS B (Expert, 350 c.c.).

TIME.—Kaye Don (2½ Diamond), 41⅗s.

René Dequin making a good ascent on his 8 h.p. Zenith and sidecar.

CLASS C (500 c.c.).

TIME.—1, R. A. Green (3½ Norton), 44⅘s.; 2, C. M. Bowen (3½ Norton), 51s.; 3, W. Julian (2¼ Levis), 52⅗s.

FORMULA.—1, W. Julian (2¼ Levis), 54.41; 2, H. Guy (2¾ Coulson B), 57.58; 3, R. A. Green (3½ Norton), 57.76.

CLASS D (Expert, 500 c.c.).

TIME.—1, G. A. Vandervell (3½ Norton), 36⅗s.; 2, Kaye Don (3½ Norton), 39⅗s.; 3, R. A. Green (3½ Norton), 44⅗s.

CLASS E (General, 750 c.c.).

TIME.—1, R. A. Green (3½ Norton), 44⅗s.; 2, W. Julian (2¼ Levis), 50s.; 3, W. J. Kelly (3½ Norton), 51⅕s.

FORMULA.—1, W. Julian (2¼ Levis), 51.92; 2, H. Guy (2¾ Coulson B), 56.80; 3, R. A. Green (3½ Norton), 57.24.

CLASS F (Expert, 750 c.c.).

TIME.—1, G. A. Vandervell (3½ Norton), 36⅗s.; 2, R. A. Green (3½ Norton), 47s.; 3, Kaye Don (3½ Norton), 48⅗s.

CLASS G (General, 1,000 c.c.).

TIME.—1, A. O. Grenzelier (8 Zenith), 42s.; 2, R. A. Green (3½ Norton), 43⅗s.; 3, F. C. Townshend (8 Zenith), 45s.

FORMULA.—1, W. Julian (5 Zenith), 53.37; 2, W. J. Kelly (3½ Norton), 55.34; 3, R. A. Green (3½ Norton), 56.

CLASS H (Expert, 1,000 c.c.).

TIME.—1, G. A. Vandervell (3½ Norton), 36⅕s. (fastest time of the day); 2, Kaye Don (3½ Norton), 37s.; 3, A. O. Grenzelier (8 Zenith), 41⅗s.

CLASS L (General, Sidecars, 1,000 c.c.).

TIME.—1, R. Dequin (7-9 Zenith-M.A.G.), 1m. 2⅗s.; 2, W. B. Reeve (8 Zenith), 1m. 6⅗s.; 3, O. Clarke (6 Zenith), 1m. 27⅗s.

FORMULA.—1, W. B. Reeve (8 Zenith), 77.20; 2, O. Clarke (6 Zenith), 92.76; 3, R. Dequin (7-9 Zenith), 96.45.

CLASS M (General, Expert Sidecars, 1,000 c.c.).

TIME.—1, O. De Lissa (7-9 M.A.G.), 49⅗s.; 2, D. H. Davidson (7-9 Harley-Davidson), 50s.; 3, F. W. Barnes (8 Zenith), 50s.

CLASS N (General, Cycle Cars, 1,100 c.c.).

TIME.—1, C. Finch (8 G.N.), 60⅘s.; 2, C. G. Pullin (8 De Marcay), 67s.; 3, C. Pressland (8-10 Crouch), 1m. 30⅗s. Formula results give the same positions.

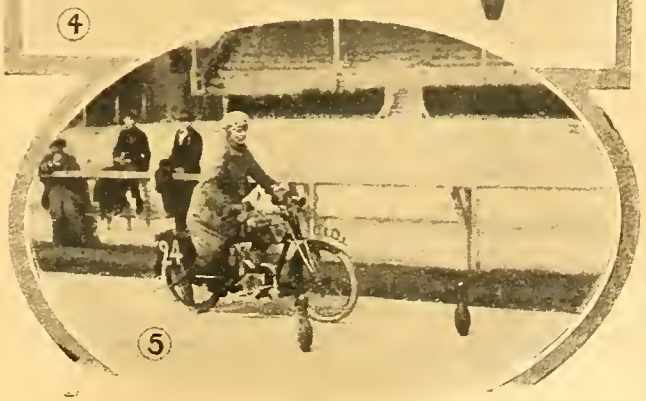
CLASS O (Expert, Cycle Cars, 1,100 c.c.).

TIME.—1, A. Frazer Nash (G.N.), 39s.; 2, H. R. Godfrey (G.N.), 40⅗s.; 3, C. Finch (G.N.), 55⅗s.

WESTERN CENTRE TWO-DAY TRIAL.

PROVISIONAL results of the two-day trial in Wales, held on the 8th and 9th of last month, were issued promptly at the close of the trial, but one or two amendments have now been made; except where mentioned below, the list published in our issue of April 14th remains unaltered. S. M. Greening (3½ Sunbeam-Jap) receives a first-class award instead of second. E. Colmer (2¾ Levis) and W. Lord (3½ Sunbeam) get third-class awards. C. Dickens (3½ Dene) does not qualify for an award, although previously credited with a third. First-class awards are gold medals, silver cigarette cases, or gold cuff links at option.

LADIES IN COMPETITION.



French Event includes Gymkhana Features.

MADEMOISELLE A. BLAZER, on an A.B.C. machine, proved herself the champion motor cyclist of France in the recent women's competition held on the Parc des Princes cycle track at Paris. The young Frenchwoman defeated her two English rivals, Mrs. Gale and Miss Goodman, on Velocettes, and was heartily congratulated by them.

The first part of the competition was one of skill, the competitors having to run down a marked course, twisting around a series of skittles.

Mrs. Gale got the cheers of the spectators when she went through the obstacles in fine style, only knocking down a single skittle. Miss Goodman was not so fortunate, for, although she only bowled over a single obstacle, she got two penalisations for missing the course. Finally, Mlle. Blazer, with the use of her clutch, made her winning display.

In the afternoon of the same day a regularity competition was held over a sixty-mile course to the west of Paris. A minimum speed of 18 m.p.h. was fixed, but each competitor was free to select any average speed, the winner being the one adhering most closely to this. For about half the distance the road surface was very rough, being among the worst to be found round Paris; for the remainder of the distance considerable traffic prevailed, for the day was a holiday. This placed the English competitors at a slight disadvantage, for not being acquainted with these local conditions they could not select an average with the same certainty as on roads known to them. The winner was Mlle. Blazer on her A.B.C., with Miss Goodman second and Mrs. Gale third.

The sidecar outfits did not finish, with one exception, this being a lady who refused to adhere to the rule of "ladies only," and was disqualified for having a male passenger in her sidecar.

(1) Mlle. Blazer, who won the contest on an A.B.C., and had the advantage of a hand-controlled clutch.
(2) Mme. Gaillard dodging the skittles on a Bleriot sidecar.
(3) Another sidecar entrant, Mlle. Janet, who made a good attempt on an Indian outfit.
(4) A Velocette ridden by Miss Goodman, sister of its designer.
(5) Another British competitor on a Velocette, Mrs. Gale.

North Lindsay A.C.

Weather conditions were so severe at the recent reliability trial that no one recorded a clean sheet run, and only three survived the trial within the time limit. These were :

1, J. Ebbutson (2¾ Douglas), 51½ marks lost; 2, H. Brampton (4¼ B.S.A.), 58½ marks lost; 3, W. Beaman (8 Rex sc.).

Falkirk and District M.C.C.

Only one of nineteen competitors qualified for a gold medal in the week-end trial to Oban. Several well-known Scottish test hills were included. Results :

GOLD MEDAL.—Allanwood Neilson (7 A.J.S.).
SPECIAL SOLO PRIZE.—W. Sinclair (3½ Norton).
SPECIAL LIGHTWEIGHT PRIZE.—W. Fleming (2¾ Wolf).

Northern M.C.

There were twenty-five entries for the week-end trial to Scarborough. A sporting course, however, reduced those to qualify for awards to eight, as under :

LEITH CUP.—J. F. Coltman (3½ N.U.T.).
GOLD MEDALS.—H. D. Woodcock (3½ Rudge Multi), A. Morgan (G.N.), and L. V. McNabb (3½ P. and M.).
SILVER MEDALS.—K. F. Dixon (3½ Sunbeam), M. J. MacKendrick (4 Norton), W. Sellers (2¾ Coventry Eagle), and Sawyer (4 Triumph).

Berwick and District M.C.

Held in conjunction with the Newcastle and District M.C., a consistency hill-climb on Corby Bank, Alnwick, resulted as follows :

FASTEST TIME OF THE DAY.—1, W. Murray (3½ Sports Sunbeam), 33⅘s.; 2, J. Lee, jun. (3½ Sports Sunbeam), 34s.
CONSISTENCY CLIMBS.—1, J. W. Forsythe (4¼ B.S.A.), ⅕s. error; 2, D. Hall (2¾ Douglas), ⅘s. error.

Barrow and District M.C.

Complete formula and time results of the hill-climb held on May 1st are now available, and are as under :

CLASS 1 (350 c.c., on Formula).—1, L. S. Parker (2½ Velocette); 2, Mrs. Roberts (2½ Monarch); 3, A. H. Tomkins (2¼ New Hudson).

CLASS 2 (350 c.c., on Time).—1, L. S. Parker (2½ Velocette), 49s.; 2, W. Dall (2¾ Omega), 52s.; 3, C. W. James (2¾ Francis-Barnet), 53⅘s.

CLASS 3 (500 c.c., on Time).—1, H. Jackson (3½ Sunbeam), 36s.; 2, G. Jefferys (3½ Norton), 36⅘s.; 3, P. Hoggarth (3½ Norton), 37⅘s.

CLASS 4 (550 c.c., on Time).—1, H. Jackson (3½ Sunbeam), 36⅘s.; 2, G. Jefferys (3½ Norton), 37⅘s.; 3, M. Sedgwick (3½ Sunbeam), 39⅘s.

CLASS 5 (750 c.c., on Time).—1, H. Jackson (3½ Sunbeam), 36⅘s.; 2, P. Hoggarth (3½ Norton), 37⅘s.; 3, M. Sedgwick (3½ Sunbeam), 38s.

CLASS 6 (Any Machine, on Time).—1, P. Baron (7-9 Indian), 35⅘s.; 2, G. Jefferys (3½ Norton), 36⅘s.; 3, P. Hoggarth (3½ Norton), 37s.

CLASS 7 (Any Machine, on Formula).—1, J. Jefferys (3½ Norton); 2, P. Hoggarth (3½ Norton); 3, M. Sedgwick (3½ Sunbeam).

CLASS 8 (Sidecars, on Formula).—1, H. Jackson (3½ Sunbeam); 2, B. Jefferys (4 Norton); 3, C. Oliverson (4 Norton).

In Class 7 (on formula) the fastest time of the day was made by P. Baron (7-9 Indian); time, 35⅘s.

Week-end Club Events.

May 21.—Coventry and Warwickshire M.C. Hill-climb.
May 21.—Glasgow Western M.C.C. Scottish Inter-club Team Trial.
May 21.—North London M.C.C. Acceleration Test.
May 21.—Luton and South Beds. A.C. Reliability Trial.
May 21.—Leeds and District M.C. Hill-climb.
May 21.—Wolverhampton Auto Nomads. Club Run to Hampton Lodge.
May 21.—Saltcoats and District M.C.C. Club Run to Inverkip.
May 21.—Bishop Auckland and District M.C. Hill-climb.
May 21.—Dewsbury and District M.C.C. Picnic.
May 21.—Holwood M.C.C. Competition.
May 21.—Wallington and District M.C.C. Club Run to Brooklands.
May 21.—Essex M.C. Old Crocks' Hill-climb.
May 21.—Stourbridge M.C.C. Paperchase.
May 21.—B.M.C.R.C. Second Members' Meeting at Brooklands.
May 21.—Middlesbrough and District M.C. Hill-climb.
May 21.—Coventry Triangle M.C. Club Run to Meriden.
May 21-22.—North West London M.C.C. Camping Week-end.
May 21-22.—Newcastle and District M.C. All-night Trial to Edinburgh.
May 22.—Manchester M.C. Speed Trials or Hill-climb.
May 22.—Stafford and District M.C.C. Club Run to Dovedale.
May 22.—Stamford and District M.C.C. Reliability Trial.
May 22.—Taunton and District M.C. and L.C.C. Club Run to Porlock.
May 22.—Halifax and District M.C.C. Club Run to Sutton Bank.
May 22.—West Birmingham M.C.C. Social Run to the Hundred House.
May 22.—Ilkley M.C. and L.C.C. Speed Trials.
May 22.—Leeds M.U. Club Run to Castle Howard.
May 22.—Bridgwater and District M.C. and L.C.C. Club Run to Porlock Weir.
May 22.—Sheffield M.C.C. Club Run to Bolsover.
May 22.—Harrogate and District M.C.C. Club Run to Lake Garmire.
May 22.—Wolverhampton M.C.C. Social Run to the Hundred House.
May 22.—West Kent M.C. Picnic at Mereworth Woods.
May 22.—Central London M.C.C. Club Run to Dunmow.
May 22.—Ivy M.C.C. (Wolverhampton). Club Run to Stratford-on-Avon.
May 22.—Rochester, Chatham, and District M.C.C. Captain's Surprise Run.
May 22.—Liverpool M.C. Half Day Sporting Trial.
May 22.—Basingstoke and District M.C. and L.C.C. Club Run to Hindhead.
May 22.—Portsmouth and District M.C. and L.C.C. Club Run to Goodwood Park.
May 23.—Woolwich, Plumstead, and District M.C. Members' Team Trial.
May 24.—Edinburgh and District M.C. One Day Open Reliability Trial.
May 25.—Burton and District M.C.C. Club Run to Dovedale.
May 25.—Exeter M.C. and J.C.C. Evening Run to Exmouth.
May 25.—Reigate, Redhill, and District M.C.C. Captain's Surprise Run.

A Section devoted to Club Announcements will be found on Supp. xxxv.

Sheffield M.C.C.

There were thirty-five competitors in the recent reliability trial over a route which included Agden, Strines, Mam Nich, and Monsal Head. W. Johnson (7-9 Indian sc.) won the S.M.C.C. Trophy with a total loss of three points only. Second and third respectively were H. Reeves (4 Douglas sc.) and J. Oscroft (8 Enfield sc.).

North London M.C.C.

Owing to the rain the last class of the day—for unlimited sidecars—at the hill-climb on Aston Hill on the 7th inst. had to be postponed. Results of the remaining classes follow :

350 c.c. AND UNDER.—1, G. Richardson (2¾ Velocette), 40⅘s.; 2, Miss D. Busby (2¾ Douglas), 44⅘s.

500 c.c. AND UNDER.—1, E. A. Marshall (3 A.B.C.), 31⅘s.; 2, E. F. Harveyson (4 Indian Scout), 32⅘s. (This last position is under consideration.)

750 c.c. AND UNDER.—1, E. A. Marshall (3 A.B.C.), 31s.; 2, R. R. T. Bowen (4 Triumph), 32⅘s.

UNLIMITED.—1, E. A. Marshall (3 A.B.C.), 30⅘s.; 2, R. R. T. Bowen (4 Triumph) and G. Read (6 Enfield), 32⅘s.

This tie was then run off, the result falling to G. Read (6 Enfield), 29⅘s.*

*Fastest time of the day.

Norfolk M.C. and L.C.C.

Below are results of a fifty-mile petrol consumption test held over a hilly course from Norwich to Cromer *via* Holt, and back *via* Aylsham, at a speed of 20 m.p.h. :

CLASS 1.—1, A. Blake (2½ Levis), 176 m.p.g.; 2, J. L. Brooks (2¼ Levis), 163 m.p.g.; 3, E. M. Wood (2¼ Levis), 145 m.p.g.

CLASS 2.—M. G. Bagshaw (2¾ Coventry Eagle), 139 m.p.g.; 2, E. J. H. King (2¾ New Imperial), 89 m.p.g.

CLASS 3.—1, R. A. Daniels (3½ Norton), 141 m.p.g.; 2, R. King (3½ Rover), 118 m.p.g.; 3, H. J. Hannent (4 Indian Scout), 113 m.p.g.

CLASS 4.—1, E. H. Gowing (5 N.U.T.), 90½ m.p.g.

CLASS 5.—1, A. Adcock (3½ P. and M. sc.), 90 m.p.g.

CLASS 6.—1, H. D. Wheeler (8 New Imperial sc.), 85 m.p.g.; 2, H. F. Mase (7 Harley-Davidson sc.), 60 m.p.g.; 3, A. H. Walker (6 Peugeot car), 59.8 m.p.g.; 4, W. Lincolne Sutton (8 Rover car), 40½ m.p.g.

The cup presented by the Lord Mayor of Norwich for the best result on formula (Classes 1 to 6) was won by H. D. Wheeler (8 New Imperial sc.).

The Mann Cup for the lowest petrol consumption in Class 3 was won by R. A. Daniels (3½ Norton).

Cambridge University M.C.C.

On the 7th inst. the club held a hill-climb on Gamblingay Hill. Electrical timing was used. There was a large number of entries in all the solo classes. Competitors' times counted in their own class and the unlimited class. H. W. Purdey (3 A.B.C.) made fastest time of the day, putting up an exceptionally good performance. Results :

UNLIMITED CLASS.—1, H. W. Purdey (3 A.B.C.), 14⅘s.; 2, O. Saunders-Davies (7-9 Indian), 14⅘s.; 3, R. Avery (3½ Norton), 14⅘s.

600 c.c. CLASS.—1, C. Moser (4 Triumph), 15⅘s.; 2, L. Martineau (4 Indian Scout), 17⅘s.; 3, E. Paxman (4 Douglas), 18⅘s.

500 c.c. CLASS.—1, H. W. Purdey (3 A.B.C.), 14⅘s.; 2, R. Avery (3½ Norton), 14⅘s.; 3, E. Reed (3½ Sunbeam), 15s.

350 c.c. CLASS.—1, J. L. Giles (2¼ Omega), 18⅘s.; 2, F. K. Sefton-Jones (2½ New Imperial), 26⅘s.; 3, C. Bates (2¼ Triumph), 27⅘s.

T.T. Notes + News.

Latest Gossip concerning Men and Machines in Next Month's Manx Races.

J. A. WATSON BOURNE, who last year was second in the Junior race on a Blackburne, will this year ride a Triumph in the Senior event.

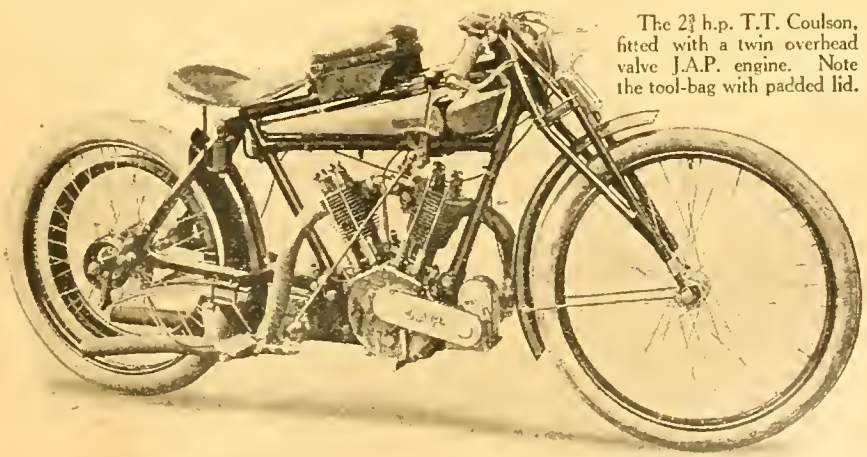
* * * * * *

C. Sgonina, of Cardiff, and S. Gill, of Bath, will also ride Triumphs.

* * * * * *

Seven Triumph riders will be available in the Isle of Man, but only six will race—the seventh being a reserve. F. C. Townshend, who is well known as a successful Sunbeam rider, is one of the Triumph jockeys, while F. G. Edmond, G. J. Shemans, and M. F. Powney, who are also named, are members of the Coventry staff.

* * *



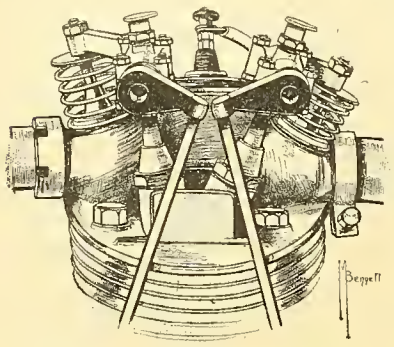
Our Island correspondent writes that at the moment it is impossible to forecast the steamer sailings owing to the disturbed state of the country. Everything depends upon the unfortunate dispute in the coal industry. At the present moment there are only three steamers a week to and from the Island. This service will probably not be further curtailed, as the Isle of Man Steam Packet Co. have in stock sufficient coal to last for over a month longer, but those who desire to visit the Island before the official practices would do well to enquire of Messrs. Orford, Ltd., 21, Water Street, Liverpool, the agents for the Isle of Man Steam Packet Co. in England.

* * * * * *

The marshalling for the early morning practices and also for the races is being undertaken by the members of the Manx Motor Cycle Club.

* * * * * *

With such a large number of competitors this organisation must be very perfect to ensure efficiency. There will be telephones at the official start opposite the Douglas playing fields, at Ballacraine, Kirk Michael, Sulby, Ramsey, Snaefell Mountain, Cregnaa-Baa, and the Governor's Bridge, and with such a system the practices should prove almost as interesting as the race days.



The 2¾ h.p. T.T. Coulson, fitted with a twin overhead valve J.A.P. engine. Note the tool-bag with padded lid.

T.T. Notes and News.—

The work of erecting the grand stand and the official enclosure has been started. This year the public will not be allowed on the road during the practices for obvious reasons.

* * * * * *

The Manx Motor Cycle Club will hold on the morning of Friday, June 17th, a hill-climbing competition up the mountain from Hillberry Corner and finishing two miles further up, just past the Keppel Gate. The following are the classes: Open, 350 c.c.; 500 c.c., unlimited; sidecar machines, 500 c.c.; sidecar machines, unlimited; cycle cars up to 1,100 c.c. The following classes are confined to T.T. riders, and the machines they used in the races: 250 c.c., 350 c.c., and 500 c.c. *The Motor Cycle* has offered the club a valuable silver trophy as last year.

Details of the new overhead valve Blackburne engine for the T.T.

* * * * * *

The manufacturers of the Sphinx sparking plug have also offered a silver trophy, and the British Oil and Turpentine Corporation, Ltd., the makers of the well-known Speedwell oil, which will be used extensively this year in the T.T. races, have given £10 worth of oil. The Committee are still open to receive other prizes, and those desiring to contribute should communicate with the hon. secretary, Mr. H. Rogers, Eastfield, Douglas, Isle of Man, and from him also entry forms can be obtained.

* * * * * *

Doctor C. H. Hopwood, who is riding a 2¼ h.p. Levis in the Junior T.T., is offering a cup for the best team in the 250 c.c. class. Dr. Hopwood, in addition to running a 20 h.p. Austin car, keeps quite a large stud of motor cycles, including a 7-9 h.p. Indian sidecar, a Scott, two A.B.C.'s, a 2¼ h.p. Enfield, and a T.T. Levis.

* * * * * *

Capt. Geoffrey Clapham, who has been entered in the Senior event by the Ilkley Club, will ride a Scott.

* * * * * *

We understand that the Ilkley Club may nominate another member to ride in the name of the club, but at the moment there is a difficulty in securing a machine.

* * * * * *

The Jap twin engine fitted in Eric Longden's 2¾ h.p. twin Coulson for the Senior race is the same as was used by this rider in last year's event, but in a Dot-Jap mount. He finished fifth last year.

* * * * * *

The riders of Coulson machines in the Junior T.T. races will be Eric Longden, H. Petty, and L. Nicholson. The two last-named will be riding Blackburne-engined Coulsons.

This year there will be special team prizes for clubs in addition to those for makers.

* * * * * *

The new 3½ h.p. Blackburne engine for the Senior race will have overhead valves.

* * * * * *

W. Brandish, who has been a consistent winner of awards in trials will ride a Rover.

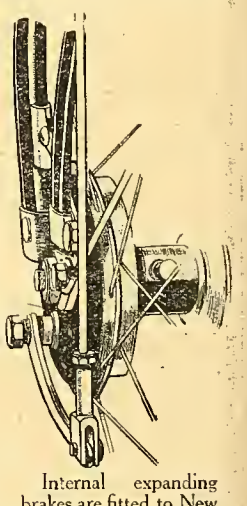
* * * * * *

The prices for seats in the grand stand vary from 20s. to 7s. 6d. Seats in the paddock cost 5s. each, and in the unreserved enclosures 3s. 6d. and 2s. Applications for reserved seats should be made to the secretary, The Auto-Cycle Union, 83, Pall Mall, London, S.W.1, with as little delay as possible.

* * * * * *

The Auto-Cycle Union desires that each competitor should wear a sleeved jacket of a distinctive colour, and somewhat after the style of jackets worn by jockeys. A competitor may select any colour or a combination of colours, but to avoid confusion it must be registered with, and be approved by, the Auto-Cycle Union before acceptance.

* * * * * *



This year there will be team prizes for the Senior, Junior, and Flyweight classes. It will be noticed that the Auto-Cycle Union has decided to call the smaller machines competing for the trophy presented by *The Motor Cycle* by the official term of "Flyweights." We cannot congratulate the A.C.U. on this decision, for the term is neither dignified nor apt. The title of lightweight is sufficiently expressive.

* * * * * *

Competitors in the Senior race will wear white numbers on a red ground; competitors in the Junior race white numbers on a blue ground. Riders of reserve machines in the Senior race, red numbers on a white ground; riders of reserve machines in the Junior race, blue numbers on a white ground.

* * * * * *

It is sincerely to be hoped that the coal strike will not interfere with the Tourist Trophy races. Mr. Loughborough was to have visited the Island this week.

Internal expanding brakes are fitted to New Imperials for the 250 c.c. class.

* * * * * *

We learn that J. L. Emerson has now joined Messrs Douglas Bros., tLd., and will be astride Douglas mounts in the I.O.M. races this year.

* * * * * *

Major Dixon Spain will be in the Isle of Man, representing the A.C.U. from the date practising commences, viz., the 31st inst.

* * * * * *

Two private owners have entered Rudge-Multi's for the Senior Race. It would appear that Messrs. Rudge-Whitworth, Ltd., the winners of the 1914 event, will not be officially represented this year. This is rather a pity, for the Multi gear proved very suitable for the Island course.

The Editor does not hold himself responsible for the opinions of his correspondents.

All letters must be addressed to the Editor, "The Motor Cycle," Hertford Street, Coventry, and must be accompanied by the writer's name and address.

PRICE REDUCTIONS AND SPARE PARTS.

Sir,—Looking though *The Motor Cycle*, we find a great number of manufacturers reducing the prices of their machines, but not in one instance do we find that there has been any reduction in the prices of spare parts. I think it is only fair to state that if they can produce machines cheaper they can also do so with spare parts. HUDSON.

Hyde.

WANTED, STANDARDISED CHAINS.

Sir,—Perhaps through the medium of your paper one or other of the chain manufacturers can tell us when we are to expect standardisation of chains. One well-known chain manufacturer sells chain links marked ⅝×½in. which will not fit chains of the same make and size. And as for using one firm's spring link on another firm's chain—well, it is impossible. I find the best way is to buy a chain a little longer than required, and then the spare links can be riveted in when a breakage occurs. HENRY EVANS.

100 M.P.H. BRITISH TWINS WANTED.

Sir,—It is gratifying to see that 100 m.p.h. on a 1,000 c.c. motor cycle has at last been exceeded in this country, but the ginger-bread is robbed of much of its gilt when one finds that the machines on which the speeds were accomplished were of American manufacture.

However, the great credit undoubtedly due to the pilots of these machines is in no way dimmed by this fact.

When, oh when, are we going to see a real British big twin "track scrapper," which will really do things worth talking about? At present we are completely out of it, the best figures put up by a British made big twin being miles behind the Americans.

These high speed records are carefully noted in most parts of the world (such is my experience), even by those who are not "grit lifters," simply because people are beginning to realise that where high speed is, there also must be power.

Some British manufacturers could do worse than think this point over. DISAPPOINTED.

Derby.

JOURNAL BEARINGS FOR HUBS.

Sir,—In the middle of more trouble with the usual type of motor cycle hub bearings, it has occurred to me that it might be possible to fit ordinary journal ball bearings that we find fitted to our gear boxes and engines.

I am aware, of course, that one machine at least is (or was) fitted with bearings of the Timken type, but I do not recollect any maker standardising ball bearings of the journal pattern. Perhaps your readers will correct in this.

I have had quite a fair experience of ball and roller bearings applied to all classes of general machinery, and I feel sure that any ball bearing manufacturer would be able to put forward a sound proposition if approached on the subject.

On a sidecar machine there would be a considerable amount of side thrust due to the pull of the sidecar, but surely this is not a matter that prevents the adoption of this type of bearing for motor cycle wheel hubs.

It would be of great interest to have other readers' opinions on this subject, as there cannot be any riders of experience who will champion the cause of the cup and cone type of wheel bearing that is, unfortunately, almost universal at the present time. A. J. HOBDELL.

ECONOMICAL SERVICE.

Sir,—It is usually considered that one disadvantage of the two-stroke engine is the unduly high petrol consumption. My present mount is a 1920 2¼ h.p. Velocette fitted with a 25 jet in the B. and B. carburetter. With this, once the engine is warm, I can give full air at the throttle openings above 10 m.p.h. I could fit a smaller jet with a corresponding increase in my m.p.g. Though I always over-lubricate, and though the engine had not been decarbonised for at least 2,000 miles, I recently, on a sixty mile run, averaged 32 m.p.h. and 148 m.p.g. A well known motor cycle expert writes me that on a similar mount he regularly obtained 180 m.p.g., and I can well believe it!

I cannot say too much for the reliability of the Velocette. My work means constant and heavy use day and night, and in all weathers, and over bad roads, cart tracks and fields. The only involuntary stop in four months was due to a broken Bowden cable—and the machine was second-hand when I bought it. The usual disclaimer. M.B.

Nottingham.

ELIMINATING LUCK AND SPLIT SECONDS IN TRIALS.

Sir,—Motor cycle trials are being run all over the country, both for the sport of it and to "improve the breed" of the machines. Unfortunately there does not seem to be much progress in the way of improving the breed of the trials.

If you would permit the space in your valuable paper, it would be both interesting and instructive to read the views of motor cyclists in general, as to how trials might be improved and made more valuable.

I would like to submit the following suggestions, if I may, for improving the conditions of the average open trial:

(1.) CHECKS.—No secret check. All official checks to be not more than fifteen miles apart, and less where possible. This should "find" machines that have had the least trouble, as it leaves little time to make up any loss. It also prevents the penalising of a machine that is going "too well" and making up a little time.

(2.) HILLS.—Each hill to have a "value." Loss of marks on hills might be:

(a) Engine stops. 100% of hill "value."

(b) Running, "footslogging," or shedding passenger. 90% of hill "value."

(c) Machine standing still with driving wheel revolving, but clean ascent without any assistance when the wheel again grips. 50% of hill "value."

(d) Solo rider falls through genuine skid, but clean ascent upon remounting. 50% of hill "value" (or possibly 25%).

(e) Baulk. Rider to make fresh climb, otherwise no allowance made.

(3.) WATERSPLASH.—Engine failure the only cause of penalty. Where a solo rider falls, he is not penalised if he starts his engine immediately he emerges from the water.

(4.) Penalty for carrying any tools beyond a repair outfit (tyre)—disqualification. A car might follow the trial carrying tool-kits handed over by the competitors before the start. The whole course should then be "non-stop."

Perhaps, with a few more suggestions, clubs might gain fresh ideas which would enable them to find the best machine without bothering about "split seconds" or unlucky spills on greasy hills. L.

Coventry.

TOO MANY LEVERS?

Sir,—Regarding "Too many levers" (by "Ixion"), I can only say that every article he mentions is absolutely necessary to the intelligent rider. The only article which can be attacked, in my humble opinion, is the air control. I think laziness and ignorance may be the cause of the growing demands for the single lever carburetter. If I can get a two-lever one to suit my machine I would prefer it to any single lever, bar one, and that is the White and Poppe car carburetter, which I have now fitted to my machine, and which gives 70 m.p.g. at speed.

I like foot and hand clutch control, and most certainly one foot and one hand brake, and am going to try a foot accelerator. A four-cylinder machine may dispense with a magneto control, but I have not yet found the single four-stroke which can do without humouring on a hill, both for air and spark. The machine without a kick start does not appeal to me.

The novice who desires to take up motor cycling must make up his mind to understand his machine thoroughly, and should start doing so when he is being taught. I even think that the man who is continually prowling about the intestines of his machine, if even out of mere curiosity, is gaining valuable experience. I am always ready to stop and help anyone—a rider of car or motor cycle—on the road; but the man whom have felt like kicking is the specimen who cannot clean a dirty carburetter or jet, or cannot get the grease out of his magwipes, or see that the magneto rocker is sticking, or any similar trivial trouble, and who at the same time admits having had the machine some months. I once met a man who could not remove a broken exhaust valve although he had the necessary tools. Of course, if it is a nice girl one does not mind at all! LONE TRAIL.

Birmingham.

ANOTHER ECCENTRIC MAGNETO.

Sir,—Under the heading "An Eccentric Magneto" your correspondent "T.C.D." asks for an explanation of the erratic conduct of his war-time American magneto. Possibly an experience of mine last year with a similar magneto, almost as eccentric as his own, may be of interest.

The instrument in question was fitted to a Douglas, and the fun began during a run from the Lakes to Darlington. On the outskirts of Barnard Castle I came upon a motor lorry in trouble with its differential, and paused to admire the language of the two mechanics whose feet were visible beneath the rear number plate. About five minutes later (when they began to repeat themselves) I attempted to restart, but to no purpose, and the usual investigations showed that the spark had faded away. (It is strange how these things invariably happen whilst standing. I verily believe that one could shed a cylinder without ill-effect provided the bicycle did not stop.) So a "big push" into "Barney," and the midnight mail to Darlington.

Those who know the hill will realise just how "big" the "push" was!

Next morning I dismantled the cause of all the trouble, looked wisely at the connections, put it together again, and—the spark was as good as ever. So back on the bicycle went the magneto, and the old 'bus excelled itself for a few days.

A week later I started a journey to London, and had done fifteen miles when again no spark; and this time there was no lorry and no mechanics, so they cannot have been the cause. So to bits came the magneto by the roadside. (I am a bit of a magneto merchant in a mild kind of way, and once repaired an electric bell.) Another wise look at the connections, then together it went, then back on the bicycle, then a short, sharp push. Result, nil!

Results were still nil four hours later, and that after enlisting the aid of the village blacksmith, who suggested a hammer. Once again the North-Eastern Railway Company solved the difficulty.

Eventually, after a thorough test, I discovered that the high-tension brush holder was neatly perforated, and that the spark was passing from the carbon brush to the metal plate upon which the holder was mounted. Probably the insulation had originally broken down through the high-tension wire coming away from the plug at speed: the designer had apparently included no safety gap in his scheme of things. A waxed paper washer made a temporary and a new brushholder (courteously supplied free by the magneto company) a permanent repair. So that's that.

By the way, referring to "T.C.D.'s" letter, I have never seen even an American magneto with the lead from the high-tension coil going to the breaker points, and should hardly expect serious insulation trouble on the low-tension side. D.I.K.

Sutton.

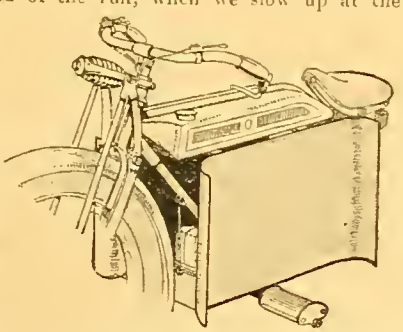
ON A SOUTH COUNTRY TEST HILL.

Even mid-week trials and straightforward hills attract a goodly number of spectators. Two lightweights being closely watched on Chalk Pit Hill in the A.C.U. One-day Trial.

FOOTBALL ON THE HIGHWAYS.

Sir,—The enthusiasm for football in this country seems to have no bounds, and is now apparently extending itself on to the highways. The offenders in this respect seem to be mostly of the ruffian type, although respectable schoolboys are often to be seen endangering their lives and those of others at this game on the roads. On two occasions recently whilst riding in Bromley, Kent, I had to stop dead to avoid danger from this cause, and in going through Swanley, Kent, on Easter Sunday, whilst slowly passing one of these ruffian gangs, the football was seemingly kicked towards me, and only missed hitting my face by inches. Had it done so, the result would have been disastrous, possibly fatal. In their mad rushes after the ball these fellows are often absolutely oblivious to the danger they create to themselves and to passing traffic.

Although it may appear to be a drastic remedy, I feel strongly that this offence should be treated as a misdemeanour and punishable accordingly, and I sincerely trust that the police will take steps in the matter.



London, E.C.2. ENTENTE.

WIND RESISTANCE OF MUDSHIELDS.

Sir,—In spite of having left the fingers of my right hand (not to mention half of the palm) on the Somme, I became, early last year, an enthusiastic motor cyclist, taking delivery of a new 4 h.p. Triumph solo. Naturally, I also ordered *The Motor Cycle*, and every week look forward to Thursday.

My friend also rides a 1919 4 h.p. Triumph, and on the way home each day—a distance of five and a half miles—we do not stop to watch the grass grow (especially on Fridays!). My engine is a very good average, his is the limit—the most flexible and "revvy" Triumph engine it has been my pleasure to see during my short experience of motor cycles.

He could leave me standing any time he liked. That was the case last August. He now has a leather mudshield fitted, and I find I can keep up with him comfortably, and, in acceleration, beat him to a frazzle, especially on a hill. Moreover, at the end of the run, when we slow up at the corner where he turns for home, his engine knocks like a blacksmith's anvil.

Mr. G. Sharp's idea of mudshields, for a Triumph, that would not appreciably increase wind resistance.

To my mind, it is a mystery why the mudshields are not made to incline outwards and forwards in the form of a V, as, it seems obvious, this would give a greater cooling current on the engine. On metal mudshields any mud might be stopped from washing through by the adoption of a mud channel, as in the 1921 Triumph front mudguards.

To carry the idea further, it appears to me that shields, as in the accompanying sketch, might possibly be fitted. The front curves would concentrate the air while the rear curves would tend to draw it through. A strong current also would be drawn past the head of the cylinder and valves. If necessary, the plug could be made accessible by a slot in the right-hand shield, while another might be cut for the Sturmey-Archer gear lever. The kick-starter would be immediately to the rear, and as the kick is made with the pedal almost horizontal, the shield would not render starting up impossible, though maybe awkward.

The advantages seem to me great.

(1.) Cleanliness for the rider. (Shield for mud and oil.)

(2.) Coolness for the engine (especially valves and head).

The only disadvantages (if we except cost) are:

(1.) Weight (negligible, as shields may be made of aluminium).

(2.) Side wind pull.

(3.) Possible warming of engine with side wind.

I should like to have other ideas on these two methods, as I consider discussion amongst riders is one of the surest means of progress. G. SHARP.

ELECTRICAL PHENOMENON.

Sir,—With reference to the ignition effect that Mr. N. H. Bailey experienced by coiling his high-tension cable round a bearing, and Mr. F. E. Schofield's somewhat slighting reply in the issue of May 5th, we suggest that Mr. Bailey's own explanation is nearer the mark.

We assume that Mr. Bailey used regular high-tension cable, whereas Mr. Schofield has apparently taken the word "flexible" to refer to ordinary electric light flexible.

Coiling the high-tension cable in the way described would increase the self-induction as well as the capacity of the circuit, both of which would reduce the voltage available at the sparking plug points. LODGE PLUGS, LTD.

MATERIALS USED IN REPAIRS.

Sir,—I am very desirous of reopening the topic of "Repairs" from another standpoint.

As a repairer, I have frequently seen jobs which were beyond criticism, from the point of view of workmanship, prove completely inefficient in durability when compared to the life of the original part as produced by the manufacturer; failure through fracture of replacement parts, of the original size, is not uncommon; and, lastly, failure of original parts, either in the process of, or after, reclaiming by hammering, bending, etc., is by no means unknown.

I think that there are several obvious reasons for the cases cited, and that the causes are by no means ineradicable.

First, increasing efficiency of designs and of materials used in manufacture means that the average part is continually loaded to a higher limit for its size than heretofore for longer continuous periods, and at higher rates of periodicity, so that its replacement by a material of either inferior or unsuitable quality may easily lessen its margin of safety to nil, although the fine quality of material to the hand of the manufacturer almost precluded the possibility of failure.

Secondly, the mishandling in heat treatment of steels of suitable quality, together with the absence, in many cases, of suitable means of case hardening.

Thirdly, the prevalent use of steels from parts which have been scrapped during repairs (axle-shafts, etc.). Parts of fractured shafts often reveal minute but dangerous flaws produced during the fracture, at points a considerable distance away from the actual break. Again, it is very questionable whether it is safe to use a piece of steel, part of which may have failed as the result of fatigue; and it is impossible to tell, unless information of a specific nature is obtainable, how its strength will be affected by heat (in hardening).

One is quite aware that high quality steel alloys are obtainable by anyone, but the fact remains that they are not in general use.

If the public would start a campaign for a high quality steel alloy, with definite rule of thumb methods of heat treatment, obtainable in small quantities, and if private owners would ask for it in their repairs, it would very soon come into general use. K. KIRTON.

BOOKS AND MAPS FOR MOTOR CYCLISTS

Issued in connection with *The Motor Cycle*.

	Price net.	Book post.
"HINTS AND TIPS FOR MOTOR CYCLISTS." Containing over 400 useful "wrinkles" and helpful hints in regard to motor cycles. Seventh Edition	2/-	2/3
"TRACING MOTOR CYCLE TROUBLES." A system for tracing motor cycle faults and of remedying them when found. Fourth Edition ..	2/-	2/3
"MAGNETOS." By A. P. YOUNG. A complete treatise on magneto ignition for motor cars, motor cycles, and aeroplanes. Second Edition	4/6	4/10
"TWO-STROKE MOTOR CYCLES." A reliable treatise on Two-strokes, from the rider's point of view. Just published	3/-	3/3
"MOTOR CYCLE REMINISCENCES." By "IXION," of *The Motor Cycle*	5/-	5/3
"THE MOTOR CYCLE" ROAD MAPS. England and Wales, Scotland, London (showing roads into and out of London and avoiding London). Mounted on linen. Set of three, complete in case.	5/6	5/10
"THE MOTOR CYCLE" ROUTE BOOK. With 32 pages of Road Maps of England and Wales, Scotland, and the London District ..	5/-	5/4

Obtainable by post (remittance with order) from ILIFFE & SONS Ltd., 23, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.

QUESTIONS AND REPLIES

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 2d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects. ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

RAISING GEAR FOR SOLO RIDING.

I would like your advice on the subject of gear reduction. I have a 3¾ h.p. Precision, with countershaft Bowden two-speed gear. (1.) The reduction is now 13 teeth on engine, 28 teeth on gear box, and the pulley turns two and a half times to one turn of the wheel. Am I right in surmising the gear to be $4\frac{9}{13}$ to 1? (2.) If so, is that high enough, and would any advantage be gained by fitting a 16-teeth sprocket on the engine-shaft ($4\frac{1}{4}$ to 1)? Why I ask this is because I think I am getting more power than speed, and my engine seems to make light work of solo riding with the present gearing.—C.T.G.

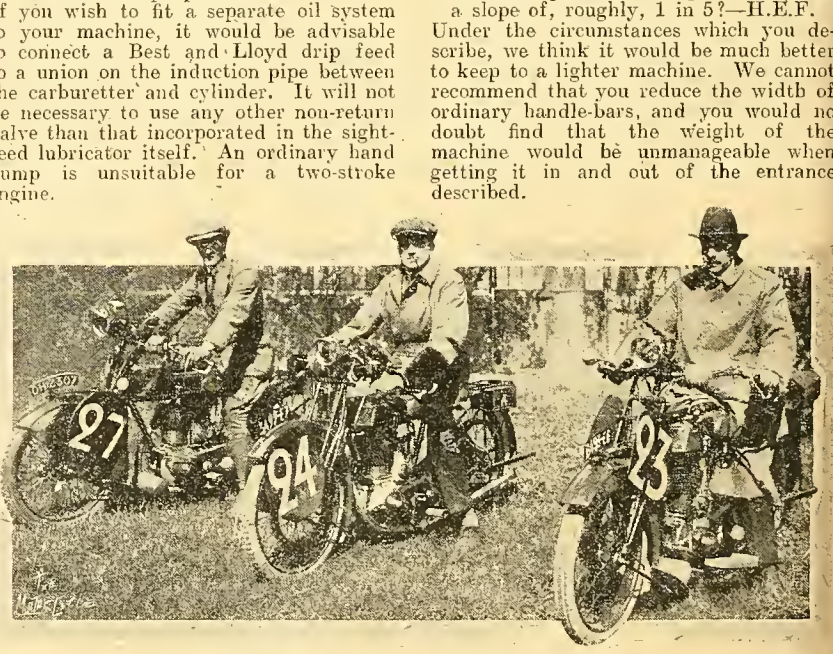
(1.) According to your figures, the present gear ratio is 5.3 to 1, and if the machine is used solo it is quite likely that the engine would pull a higher gear. (2.) A 16-teeth sprocket on the engine-shaft would give you a ratio of 4.4 to 1, which is rather high unless the machine is used normally on comparatively level roads.

MINIMISING HANDLE-BAR VIBRATION.

Most of my riding (pleasure only) is done in North Wales, and I usually average 20 m.p.h., excluding stops, but seldom exceed 25 m.p.h. at any time. Doing sixty to one hundred miles per day at Easter, I was rather troubled by wrist-ache, due to pot-holes and the general bad state of the roads. (1.) Would Terry's spring links obviate or alleviate this wrist-ache? Can they be fitted to B.S.A. spring forks? (2.) Are they in any way detrimental to the steering, or weakening to the head of the frame? (3.) Would rubber grips help matters, and, if so, can they be satisfactorily fitted where inverted Bowden levers are in use?—A.H.A.

(1.) The spring links would no doubt reduce the effect of vibration considerably. We believe that they can be fitted to your machine without difficulty, but it would be best to write to the makers for information on this point. (2.) They are used quite successfully on several sidecar outfits. (3.) Rubber grips are quite satisfactory, and eliminate a considerable amount of handle-bar vibration. They are exceedingly comfortable, and can be fitted on handle-bars with inverted levers, but it is necessary with some patterns to remove the levers first.

ELIMINATING THE PETROIL SYSTEM.



I have a 2¾ h.p. two-speed two-stroke machine which is at present lubricated by the petroil system. This is quite satisfactory as regards lubrication pure and simple, but the machine is always in a beastly mess, and I should be greatly obliged for your advice with regard to fitting an independent lubrication system. There is a separate oil compartment fitted in the tank, and a drain plug at the bottom of the crank case. If I fitted a Best and Lloyd drip-feed lubricator, and connected it to a ball check valve interposed between the oil pump and bottom of crank case, would this give sufficient oil to the cylinder through splashing from the balance weights? or would the amount of oil in the crank case to enable the balance weights to splash it on the cylinder walls interfere with the mixture? Is a check ball valve between oil pump and crank case necessary? Would the ordinary oil pump fitted (which contains a ball valve) serve for the purpose?—F.C.

If you wish to fit a separate oil system to your machine, it would be advisable to connect a Best and Lloyd drip feed to a union on the induction pipe between the carburetter and cylinder. It will not be necessary to use any other non-return valve than that incorporated in the sight-feed lubricator itself. An ordinary hand pump is unsuitable for a two-stroke engine.

AN AWKWARD ENTRANCE WAY.

Intending to dispose of my present 2¾ h.p. motor cycle, so as to obtain one of higher power, I had in mind the purchase of a new 4 h.p. single-cylinder machine. Unfortunately, I have to negotiate a step 9in. high each time I take my machine out, and to do this have made a 4ft. ramp up which I push my cycle. Then I have to go down a passage at the side of the house which is no wider than 30in., and has a permanent doorway midway, which, when fully open, does not permit handle-bars wider than those on my present lightweight passing through. (1.) Would the slight narrowing of standard upturned handle-bars, in order to pass through above doorway, seriously affect the steering? (N.B.—I do not wish ever to do any speed work, and shall probably never exceed 30 m.p.h. at most.) (2.) Whether I, being a "lightweight" (eight stone, in fact), should find it practically impossible to wheel a 250 lb. machine up the 4ft. ramp, which makes a slope of, roughly, 1 in 5?—H.E.F.

Under the circumstances which you describe, we think it would be much better to keep to a lighter machine. We cannot recommend that you reduce the width of ordinary handle-bars, and you would no doubt find that the weight of the machine would be unmanageable when getting it in and out of the entrance described.

FRENCH RIDERS ON BRITISH MOUNTS.
A Sunbeam team that rode in the recent French trial from Paris to the Pyrenees and back

TOO MUCH ADVANCE.

My Villiers-engined two-stroke runs well as a rule, but just lately, on restarting after a short run, the engine goes almost as well in reverse direction as normally. At anything but full retard, the engine, when well warmed up, runs backward. This does not appear to move the wheels, owing, I suppose, to belt slip. The engine was decarbonised only 100 miles ago. Surely this is a bad fault somewhere. The spark is timed as follows: Points about to open with the piston almost at top of stroke. —O.K.J.

If the engine runs in the reverse direction, it is obvious that the spark is much too far advanced, and you should retime it so that the contact breaker points have just separated when the piston is on top dead centre, the magneto control being fully retarded.

TWO-STROKE RATTLE.

I have a 1915 two-stroke single-speed machine, which will not take a very large air lever opening without considerable popping back, but which I have not troubled about, as the m.p.g. has been very economical—over 100 m.p.g. on a run. During the last week, however, when going downhill or running slowly with small throttle opening and air lever wide open, a most peculiar sound has developed in the engine, exactly like the back stand dropping down and bumping along the road. This ceases when the throttle opening is again increased.—TUNBRIDGE WELLS.

You have evidently encountered the mysterious "two-stroke rattle" for which no reasonable explanation has yet been evolved. In your case we should imagine that it is brought about by a partial restriction of the petrol supply, possibly a minute fragment of grit in the jet or by a choking of the petrol pipe, so reducing the supply of fuel. Make quite sure, however, that the noise is not due to some straightforward mechanical cause, such as a loose magneto or driving chain striking its case.

USING A CYCLE DYNAMO.

I have a Voltalite generator which I used on a push cycle. Its usual ontput was, I believe, 6 volts, at what revolutions I could not say. (1.) Can I use this on my machine (a 2¾ h.p. Douglas) to charge accumulators for lighting? (2.) It is made to work with a rubber wheel running inside the road wheel rim. Rubber wheel, 1in. diameter; road wheel, 28in. Can you tell me what sized pulleys to fit on the flywheel, and on the Voltalite, to give the same revolutions (approximately) as on the push cycle? I understand there is no increase in output above the normal revs. (3.) How can I find the positive and negative terminals?—R.A.P.

(1.) You cannot charge accumulators with the Voltalite generator. (2.) You will probably have to experiment with various gear ratios, but we would suggest that you fit a 3in. pulley on the flywheel and a 1in. pulley on the generator spindle. This should give you a satisfactory gear ratio for normal speeds. (3.) There is no answer to this question, as the current is alternating.

Important Dates.

Sat., May 21st—Western Centre A.C.U. Open Hill Climb.

Sat., May 28th—East Midland Centre A.C.U. Open Hill Climb.

Tues., June 14th—Junior T.T. Race.

Thurs. June 16th—Senior T.T. Race.

Sat., June 18th—North-Western Centre A.C.U. Open Speed Trials.

Sat., June 25th—M.C.C. Inter-team Trial for "The Motor Cycle" Cup

Fri., July 1st, and Sat., July 2nd—Arbuthnot Trophy Trial.

Sat., July 2nd—Bournemouth M.C.C. Open Reliability Trial.

Sat. July 2nd—500 Mile Race at Brooklands for the Miller Gold Cup.

Thurs., July 7th—Essex County and Southend A.C. and Essex M.C. Joint Open Speed Trials.

Sat., July 9th—St. Andrews Speed Trials

Sat., July 9th—Cardiff M.C.C. and associated clubs Open Hill Climb.

Mon., July 11th, to Sat., July 16th—Scottish Six Days' Trial.

Sat., July 16th—Ilkley M.C. and L.C.C. Open Reliability Trial.

Sat., July 23rd—East Midland Centre A.C.U. Open Speed Trials

Sun., July 24th—Motor Cycle Grand Prix Race in France.

Sat., July 30th—Newcastle and District M.C. Open Speed Trials.

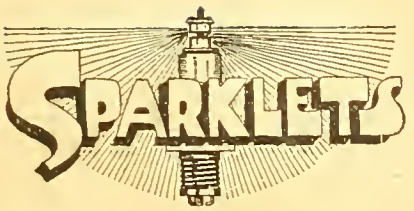
Mon., Aug. 1st, to Sat., Aug. 6th—International Six Days Trial in Switzerland.

Sat. Aug. 6th—North Wales M.C.C. Open Reliability Trial.

Mon., Aug. 29th, to Sat., Sept 3rd—A.C.U. Six Days Trial.

Sat., Sept. 17th—Grand Prix Race for Cycle Cars.

EXPERIENCES WANTED.



"PASSENGER" (Chelmsford).—Fitting of footrests for pillion passenger on 4 h.p. Triumph, make used, best position, comfort, etc.

"S.H.D." (Warwick).—Valve stem air leak preventers on inlet valve of single-cylinder B.S.A.; effectiveness after prolonged use.

AN ITALIAN AGGREGATE TROPHY.

For the consistent performance of an individual make of machine: the King of Italy's Trophy presented to the Societá Sportiva la Torino. This graceful cup is awarded annually to the maker of the motor cycle which achieves the best aggregate performance in competitions throughout the year, and also scores in one special race. Last year the Indian qualified for the cup.

Scotts in Switzerland.

In the Circuit Romand Trial (350 kilometres in length), held in Switzerland on April 24th, the Scott was the only team to finish without losing marks. The riders were M. Alfter (Scott and sidecar), Mm. Bischoff, Lavanchy, Meir and Dupont, riding Scott motor bicycles.

Two-stroke Engine Repairs.

Riders who have machines fitted with Union engines will be glad to learn that Alfred Wiseman, Ltd., Glover Street, Birmingham, are specialising in the repairs and the supply of replacements.

Useful Driving Instructions.

Under the heading of "Some Helpful Hints" two little books devoted to the care and management of B.S.A. motor cycles have just been published by B.S.A. Cycles, Ltd., Birmingham. The books refer respectively to the single and twin cylinder models, and are filled with most practical advice. Every B.S.A. rider should make a point of obtaining the one dealing with his own particular model; a postcard request will bring it.

Cox-Atmos Carburetters in London.

When special carburetters are being added to a machine, they should preferably be fitted by experts, as individual engines even of the same make may require a slightly different setting. Cox-Atmos Carburetters, Ltd., have, therefore, appointed the Cromwell Engineering Co., 127, Fulham Road, Kensington, London, S.W.3, as their fitting agents for the benefit of south-country motor cyclists. This firm is prepared to supply this carburetter on a sixty days' trial.

An Address Wanted.

Will Mr. A. H Swinford, the inventor of a spring pillion seat, kindly send the Editor his address, when his communication will receive attention?

Catalogues Received.

A. H. Hunt, Ltd., H.A.H. Works, Tunstall Road, East Croydon, Surrey: Supplementary list No. 45, giving wiring diagrams for motor cycles and sidecar lighting outfits, prices of various lighting sets, electric lamps, and numerous electrical accessories.

George Brough, Haydn Road, Nottingham: Large half-tone reproductions of the 8 h.p. Brough Superior machines are the feature of George Brough's four-page catalogue, which, though brief, is decidedly to the point. Each machine is guaranteed to do from 8 to 80 m.p.h. on top gear. A new model with 8 h.p. M.A.G. engine is listed as an alternative to the o.h.v. J.A.P.-engined machine.

Burney and Blackburne, Ltd., 38, Conduit Street, London, W.1: A leaflet referring to the six models of Blackburne engines, giving their chief points and interesting features.

CURRENT CHAT

,, 25th	... ...	9.26 ,,

Hill-climb on Stile Cop.

Over 150 entries have been received for the Coventry and Warwickshire A.C. hill-climb on Stile Cop next Saturday.

A Motor Cyclist King.

His Majesty the King of the Belgians has recently taken delivery of a New Scale motor cycle for his personal use.

New Index Letters.

The County Council of Surrey, in addition to the letter P as its index mark, has now PA and PB.

Motor Cycling in the Argentine.

A tourist trophy race was recently held in the Argentine, which followed the lines of the English classic event. It was won by Ernesto Blanco (Harley-Davidson) in 8h. 1m. 2s., with Raul Riganti, similarly mounted, second. The sidecar class was also won by a Harley-Davidson, with another Harley-Davidson second.

Liverpool-London Trial Proposed.

The Liverpool M.C. is endeavouring to organise a twenty-four hours trial from Liverpool to London and back in conjunction with three other clubs affiliated to the A.C.U. in London or Birmingham, all travelling over the same route and starting and finishing at their own headquarters.

Imports and Exports.

British motor cycle exports continue to increase, and, despite the industrial crisis, the figure for April is £22,098 higher than that for March, representing an increase of 343 exported machines. On the other hand, although considerably more complete machines were imported last month as compared with March, the total value of motor cycles and parts has slightly decreased over the same period. Extracts from the Board of Trade returns for April with comparative figures for March are appended :

IMPORTS.

	Mar., 1921.	April, 1921.
Number of motor cycles	25	71
Value of machines and parts	£19,889	£18,440

BRITISH EXPORTS.

	Mar., 1921.	April, 1921.
Number of motor cycles	817	1,160
Value of motor cycles only	£68,618	£92,823
Value of parts	£28,992	£26,785
Total value	£97,610	£119,708

An Amended Award.

F. W. Giles (7 A.J.S. sc.), who was awarded a silver medal in the Midland Centre A.C.U. open trial, has now been awarded a chief award.

Price Reductions.

Calthorpe prices have been reduced. The 3 h.p. sidecar outfit is now 105 guineas; without sidecar, 60 guineas. A new 2½ h.p. model is also being marketed at 43 guineas.

The Sport in South Africa.

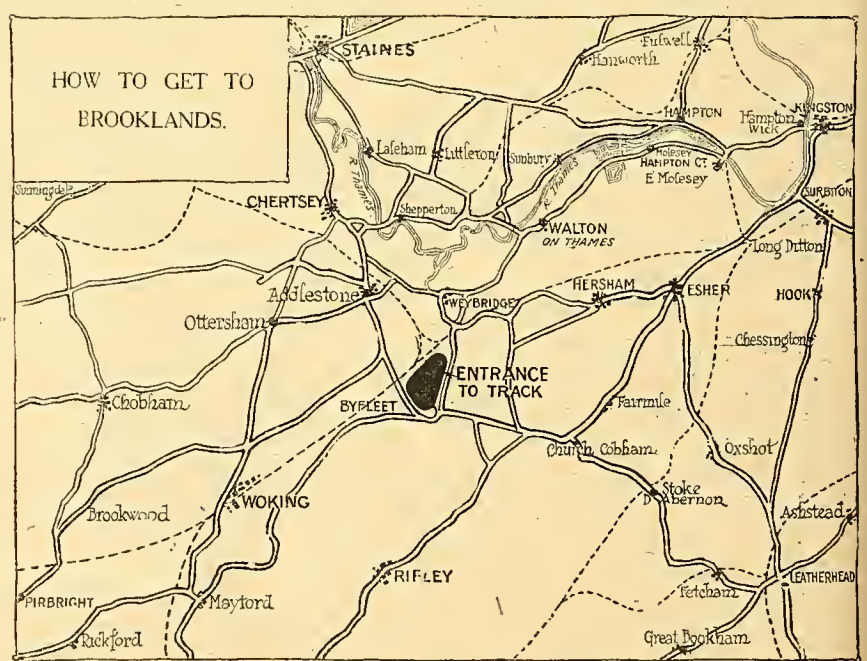
The annual road race from Durban to Ladysmith and back was recently run off by the Natal M.C.C. over a distance of 310 miles. Not long before the race it had rained, and the roads were in bad condition.

In the sidecar class : 1, C. C. Smith (Harley-Davidson); 2, R. J. Blackburn (Harley-Davidson); 3, H. P. Harper (Indian). In the motor bicycle class : 1, C. Young (Triumph); 2, P. Flook (Douglas); but Flook was declared the winner of the solo class on handicap. Young was riding during part of the journey with broken handle-bars.

Special Features.

A WELSH CORKSCREW HILL.
HOLIDAY EVENTS.

A Royal President.



H.R.H. Prince Arthur of Connaught, K.G., G.C.V.O., has again been elected president of the Roads Improvement Association.

Route Queries.

Readers who ask for routes to be worked out are requested to confine their letters to this subject. Should they require other information, a separate letter and envelope should be enclosed. This will avoid considerable delay and confusion.

A Remarkable Speed.

At Beverley Hills Speedway, California, on April 24th, a remarkable performance was made by Albert Barnes, riding a standard Powerplus Indian. In the fifteen-mile race he is said to have covered this distance in 8m. 46⅘s.—an average speed of 102.54 m.p.h.

Motor cyclists strange to South-West London, visiting Brooklands for the first time, may have difficulty in finding the track without frequent stoppages to ask the direction, but the accompanying map (prepared by the A.A.) showing its relative position should enable anyone to reach it without delay. The next meeting for motor cyclists is on Saturday next.

Motor Cycles still being Stolen.

A reward of £20 is being offered by Mr. C. G. Smith, of Norton Motors, Ltd., for information that will lead to the recovery of his Norton sidecar outfit (engine No. 19851), which was stolen from Sparkhill two weeks ago.

The Willing Sidecar Outfit.

Heavily loaded sidecar outfits again predominated over all other road vehicles last week-end. On a main Midland highway five sidecars in Indian file were seen, each carrying what must have been entire families, for none of the machines conveyed less than four persons—and the engines were quite happy about it, too.

Speed-judging Competition in the Highlands.

At the speed-judging competition held by the Helensburgh M.C.C. on the 11th inst., competitors went from Helensburgh at balloted speeds in the direction of Tarbert until turned by an official. They then proceeded homewards, having been warned that the finish was not at the same place as the start. Time was taken at the "turn" and at the finish. Results: 19 m.p.h., 1, W. N. Payne (3½ Norton), total error 53s.; 18 m.p.h., 2, A. McCulloch (7 A.J.S. sc.), 1m. 4s. The greatest error was 13m. 20s.

Real Economy.

There is no arguing the question of the cheapest motoring, for the sidecar easily leads. A reader sent a snapshot as we went to press of his outfit just before starting off for a joy ride last week-end. In the sidecar are four small boys from four to eight years old and also Montmorency, the dog. On the carrier is the mother. Contrast this journeying in last Monday's glorious sunshine with train travelling!

The Club Championship.

Which club will win the club championship this year? Now that the 1921 London-Edinburgh is an event of the past, the M.C.C. team trial for *The Motor Cycle* Cup is the next big road trial of national interest. This year the competition, which takes place on June 25th, promises to be keenly fought, and club captains are watching the performances of their best riders to assist them in making up their teams. Last year the South Birmingham Club provided the champion team. The 1921 trial will be the fourteenth, and, it is anticipated, will attract upwards of fifty teams. Both the M.C.C. and the Coventry and Warwickshire M.C. own two shares of the trophy, which has to be won three times to secure possession.

Paris-Pyrenees Results.

Only ten riders completed the Paris-Pyrenees-Paris Trial without loss of marks. These were Chappex (3½ Sunbeam), Pinney (4 Triumph), Delabarre (7-9 Harley-Davidson), Breese (4½ B.S.A. sc.), Renard (6 B.S.A. sc.), Vuilliamy (7-9 Harley-Davidson sc.), Verlet (7-9 Harley-Davidson sc.), Walbron (7-9 Harley-Davidson sc.), Horrel (G.N. cycle car), and Breno (G.N. cycle car). Of the forty starters, twenty-seven finished the course. Breese and Renard on B.S.A.'s won the Pyrenees Cup, while the Cote d'Argent Cup has been awarded to J. Psalty and Delabarre (Harley-Davidsons).

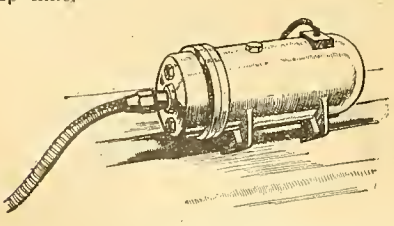
When are Petrol Prices Coming Down?

There is a pretty general opinion that at present petroleum production is beginning to exceed consumption. That is likely enough. Beyond question the present high prices to which the ring have raised motor spirit are doing little good to the petroleum interests, says *Motor Transport*. Indeed, the maintenance of petrol prices under existing conditions is beginning to attract attention. Petrol and petroleum have, in fact, become as much a national question as is coal, which is to the good in that it may enable public interests to be focussed in State action.

The enthusiasm in Edinburgh at the finish of the London-Edinburgh run may be judged by the big crowd that gathered to watch the competitors as they arrived.

THE LONDON-EDINBURGH RUN.

170 Motor Cyclist Survivors in the Fourteenth M.C.C. Whitsuntide Event.

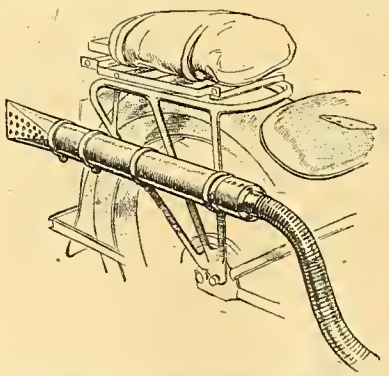


P. W. White (8 Sunbeam sidecar) approaching the steepest section of Buttertubs Pass, where the banks formed a natural grandstand for the spectators. Notwithstanding, dozens chose to stand in the roadway and to some extent impeded the competitors.

ALTHOUGH called by the M.C.C. a club run, this year's event between the two capitals was as strenuous a competition as it was last year, for the Yorkshire section was difficult and needed not only a good mount, but skilful driving.

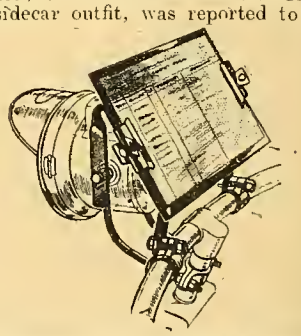
The scene at the start was much the same as on previous occasions. There was the same keen and enthusiastic crowd, the excellent police arrangements—perhaps even better than usual this time as the crowd was kept well back and the men were able to start off in comfort instead of through a narrow lane of people. The first man, E. Pond (Triumph), was sent off half a minute after 7 p.m., earlier than on previous occasions, so that forty miles were covered before lighting-up time.

Hot, sultry, and cloudy weather prevailed, but weather is always kind to the M.C.C. on the Edinburgh run, and a glorious evening and night were enjoyed. A mile past Barnet, Taylor (8 Blackburne sc.) was seen attending to his front wheel, and a little further on Guy (2¾ Coulson) was seen helping Nicholson, who was similarly mounted and was at this early stage mending a puncture. Both were going well at Digswell and making up time.



The new "Wattalite" dynamo mounted on the top tube of Holroyd's New Scale. The dynamo is driven by enclosed flexible drive from the rear wheel.

Coffee and fuel for man and machine were ready at Biggleswade, and were as efficiently served as usual by the kind people at the Swan Hotel.



The presence of the Biggleswade check made itself known some yards away, owing to the smell of carbide wafted gently on the night air, but not much lamp trouble was experienced, and we heard no complaints of electric lighting installations.

Harveyson (Indian Scout) reported a broken petrol pipe at Digswell, which the repairer mended, refusing any other payment than a glass of beer, which he imbibed the meantime. The night run was warm and pleasant, there was little mist, and the miles fled quickly by to Grantham. Here there was little news, except a report of a somewhat serious accident to a lame driver, J. Joynson (5-7 Coventry Victor sc.), who left the road some thirty miles back, turned over, tore the sidecar from the motor bicycle, and was badly hurt.

The very large exhaust pipe bolted on the side of the carrier frame on C. D. Michaelis's Harley-Davidson. The exhaust pipe is connected to the engine by flexible metallic tubing.

At length day broke with the usual early morning chill. In Retford, F. Clay (2½ Campion) was suffering from the effects of lamp trouble. Near Doncaster, the next check, E. J. L. Strong (Harley-Davidson sc.) was in straits with his sidecar, which had apparently become detached. Stone (2½ Olympic), behind time, passed at speed *en route* for the check. After Doncaster, Harveyson (Indian) was observed travelling fast, which must have been uncomfortable, since the road surface up to the Ilkley turning off the Wetherby road was in a terrible state owing to heavy vehicle traffic. R. T. Lloyd (2¾ Wolf) had a rope trailing from his mount. McBirnie (7-9 Indian) was seen by the roadside at Harewood, but soon got going again. At Ilkley, the second breakfast stop, Taylor (8 Blackburne sc.) was noticed to have a broken speedometer cable, while Pantard, the driver of the old Chater-Lea sidecar outfit, was reported to have

Route card board held by four stays on the handle-bar on E. E. Barrett's Zenith. This is a neat, and popular, method of carrying these cards.

Ellison Hawkes (2¾ Blackburne-Excelsior) leaving Ilkley after breakfast.

H. V. Bateman (2¾ Diamond) passing under the picturesque archway at Bolton Abbey.

retired with a broken frame, so heavy a toll did the bad roads exact. Bateman (2¾ Diamond) was among the several who were delayed by punctures in the first half of the run. About ten minutes' run from Ilkley, J. Bradbury (Triumph) was seen outside a village garage, while one of the early starters, L. Pulham (Ariel), stopped near Kettlewell.

From Ilkley the roads were winding but fairly good, and the scenery near Kilnsey was glorious. After Kettlewell came the most interesting part of the journey, which was over lovely country. First Cray Ghyll had to be negotiated, which was steep but not too difficult, though numerous gulleys across the road put heavy stresses on frames. The descent, however, on the other side, known as Kidstones, was really severe, the surface was appalling, the gradient considerable, and the frame-smashing gulleys numerous. Here Stone (Olympic) damaged his front wheel, and a little further on Simpson (Indian sc.) was seen with his back wheel out. Clay (Campion) was noted wrestling with his belt near Aysgarth. Into and out of Thoralby just before reaching Aysgarth there were hills and corners of no mean severity; indeed, this part of the course, which was of a thoroughly sporting nature, was full of surprises and pitfalls, culminating in the three-mile climb of Buttertubs Pass. After the time check at the summit, there followed a steep and dangerous descent to Thwaite; then a nasty climb, commencing at Keld, led over a steep, narrow, and rough moorland road. A secret check was taken before Nateby, and its incidence confirmed the impression that a 20 m.p.h. average was very difficult over the section which commenced at Buckden. Fortunately, the checker was a doctor, as he was able to attend G. Milner (8 Sunbeam sc.), who skidded, overturned, and broke his leg at this point. Once this section was over, there were no other difficulties. After Carlisle, the luncheon stop, rain fell as far as Moffat, where tea was served, and thereafter an excellent run over good roads was made to Edinburgh. Ninety-three motor bicycles, sixty-one sidecar outfits, and sixteen three-wheelers finished the course—a total of 170 out of 204 starters.

H. F. Fellowes (4 Coulson-B.), A. C. Rhodes (3½ N.U.T.), C. N. Green (5-6 Rover), and H. S. Moorhouse (4 Triumph) enjoy a cigarette whilst waiting outside Kettlewell.

A blind right-angled corner at Thoralby caused some trouble to the competitors approaching Buttertubs. In the foreground is W. E. Grange, of Harrogate, on a 6 h.p. Bradbury sidecar.

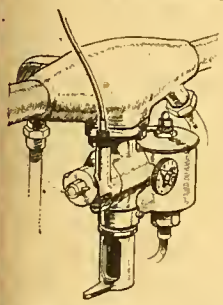
G. C. Newman (Morgan-M.A.G. runabout) ascending Buttertubs in company with a "hay motor."

OBSERVATIONS ON BUTTERTUBS PASS—THE ONE TEST HILL.

THIS year a successful ascent of the one test hill—Buttertubs Pass—meant a great deal to the competitors, for it served as an eliminating test for the gold medal winners. From the bend at the foot of the pass to a point three miles up was a non-stop section, and Ilkley Club officials were prominent among the marshals.

Quite early, spectators on bicycles, motor cycles, and cars commenced to foregather from all parts on the steepest section of the pass, which led the competitors from Wensleydale into Swaledale—the reverse of the route traversed by the A.C.U. Six Days Trials' competitors last August.

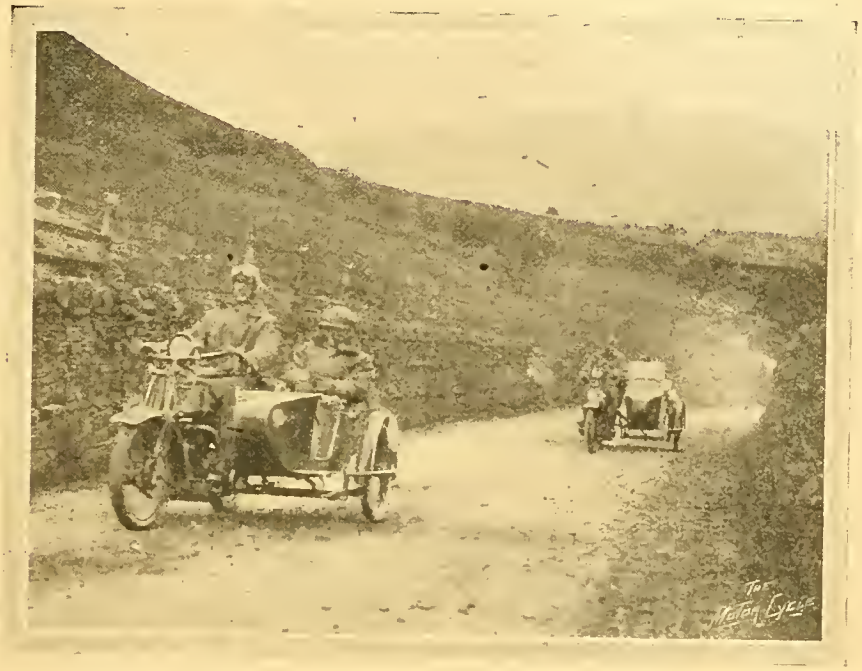
From the specially prepared contour section of the approaches to Buttertubs, which appeared in our last issue, those unacquainted with the West Riding of Yorkshire had an opportunity of judging the severity of the twenty-mile section leading to the foot of the pass. (Incidentally, the "Blue Cover" was, as usual, largely in evidence among the spectators.) Cray Ghyll, for instance—not mentioned in the regulations because it was not officially observed—claimed its quota of spectators and it is no mean climb, as some competitors will now agree.



The succeeding descent of Kidstones, with its deep cross gulleys, also demanded skill and caution, and therefore the sinuous and narrow roads kept the riders at all times on the alert. With so many competitors it was only to be expected that some would experience trouble, and there were rumours of two sidecars having overturned at the foot of the precipitous Kidstones. Another single figure gradient after Aysgarth troubled a few riders. Approaching Buttertubs in brilliant sunshine one observed that the hill summit was shrouded in mist, and sure enough, during the ascent, slight rain was encountered which cleared later.

The spectators' view of the competitors approaching the steepest stretch of Buttertubs. The competitor is J. Haworth (2½ Connaught).

The London-Edinburgh Run.—



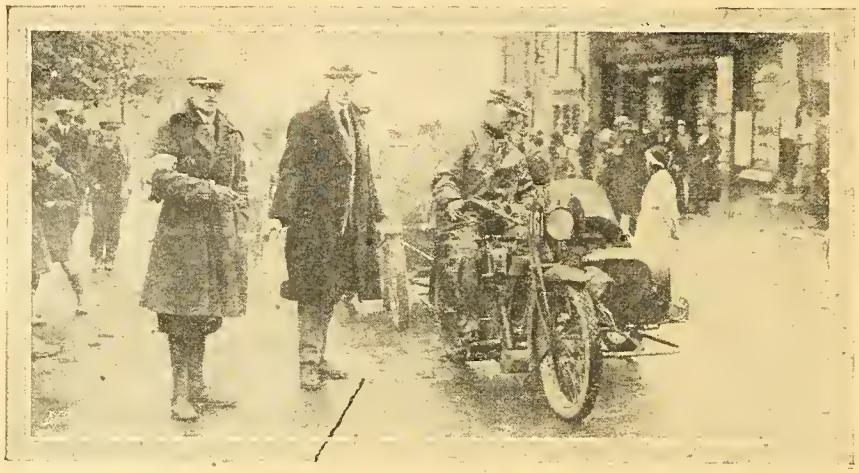
Following the official cars at 9.33 a.m., L. A. Baddeley (P. and M.) led the 117 solo riders, making an easy climb up the steepest section, No. 1, E. Pond (Triumph), repeating the performance. Brough and Karslake were the next arrivals, climbing fast and almost abreast on their big twin Brough Superiors. Hoult (Scott), as well as Gibson and Eastwood, on 2¾ h.p. Royal Rubys, were noticeable for clean and impressive climbs. Longman (Ariel) changed up immediately after the steepest section. Sharratt (Indian Scout) got up well despite misfiring, Plowman (Sunbeam) travelled well, Dawson (Rudge Multi) had power to spare, Cuffe (Metro-Tyler) did well, whilst Bell's F.N. buzzed up as impressively as only a well tuned four-cylinder can.

Douglas experimental single lever carburetter on G. Fletcher's 4 h.p. Douglas.

Thus early it was recognised that the competitors would experience no real difficulty on Buttertubs, which is not so severe a test as Kirkstone Pass, included last year. The surface of the hill, though perfectly dry, was rough, loose stones abounding on the steepest pitch, estimated as 1 in 5½ or 1 in 6. But for the length of the pass, the ascent formed a comparatively easy test for a modern variably geared machine. Leyland (P. and M.) and O'Reilly (N.U.T.) went up well, but Watkins (Royal Enfield) dangled his legs each side, quite unnecessarily one thought. Hawkes (Excelsior-Blackburne) emitted a healthy crackle as he opened the throttle for the steepest stretch in contradistinction to J. C. Watson (Harley-Davidson) and McLachlan (Reading Standard), who swept silently up the gradient. Stacey (Verus) and Atkinson (Triumph), in close company, went up excellently.

The first stop was due to a collision, Battley (Triumph) swinging over the road in front of Dunford (Verus). Both came to a standstill, restarted, and made clean ascents. Hall (2¾ Verus) carried a fire extinguisher on his carrier, evidently preferring it to luggage. Ellison (Zenith) made a very neat climb, while Bourlet showed again that Buttertubs is no test for an Ariel. Wall (Cedos) just got up comfortably, Bennett (Metro-Tyler) following very late and with a noticeably flabby rear tyre. Robbins (Wooler) travelled well, also Stevenson (Brough), who left behind a strong odour of Castrol. Moorhouse (Triumph) and Green (twin Rover) were among the fastest, Ball on a Scott, having a stove-pipe for the exhaust outlet, climbing well to the accompaniment of a low booming note. Three together—Conville (Lea-Francis) and Morgan and Francis on Triumphs—to a man ascended easily. Haworth (Connaught) was prominent for a neat lightweight climb, Shepherd (Beanmont) did well, while Reyre (twin James) was quite unconcerned.

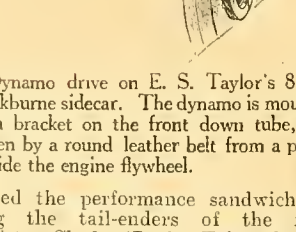
A. R. Penney and R. Rayner on 7 h.p. A.J.S. sidecars on the lower portion of Buttertubs Pass.



R. M. Veale (6 B.S.A. sidecar) passing a car on the steepest section of Buttertubs Pass. Observe the loose state of the surface

Number plates bolted to the side of the head lamp on J.G.Bluhm's B.S.A. This method was adopted on several machines

After several Triumphs and a Harley had passed cleanly, Hancock (Lea-Francis) applied foot assistance on the top of the steep stretch, whilst Bridgeman (2½ Gamage) stopped altogether. Restarting, he travelled forty yards, stopped again, and fell headlong over his machine in a cloud of blue smoke. "Another gold medal gone" was the way one inconsiderate spectator put it!

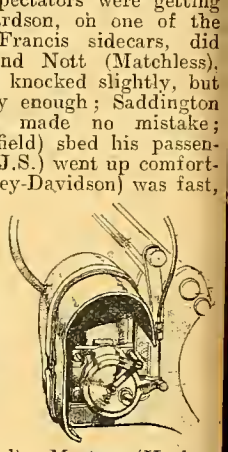


T. J. Ross (8 Matchless sidecar) and G. Nott, on a similar mount, checking at Moffat.

O'Sullivan (Harley-Davidson) had his gear jump out momentarily, but he recovered himself with amazing speed, and completed a clean climb. Mocatta (Harley-Davidson) was fast, and then followed a bunch of riders in close succession all to make clean ascents, viz., Edwards (Coulson-B.), Baddeley (N.U.T.), Bluhm (B.S.A.), Scale (New Scale), Boome and Hardwick (Triumphs), Ingham and Labin (Indian Scouts), and Hilger (Rover). A spectator's Ford now arrived, only to konk out and create a hubbub of excitement as it blocked half the roadway. Pa Appleby (2½ Levis) got his usual cheer, and deserved it, for a neat ascent. Barrett (2¾ Zenith) just got up, Rothwell (Triumph) and Hanwell (Cedos) were good, as were Guthrie (Raleigh) and Holroyd (Scale).

The Sidecars on the Test Hill.

Sidecars now loomed in sight, Bridgman (Indian), according to programme, leading the way and proving quite as fast as the solo mounts. Brown (Indian)



Dynamo drive on E. S. Taylor's 8 h.p. Blackburne sidecar. The dynamo is mounted on a bracket on the front down tube, and driven by a round leather belt from a pulley outside the engine flywheel.

repeated the performance sandwiched in among the tail-enders of the motor bicyclists. Clarke (Junior Triumph), very late, stopped on the steep pitch, also Harrington (2¾ Douglas), the latter carrying an enormous horseshoe on the forks for luck! Coes (Indian), Wilson (Quadrant), Wallis (Reading Standard) stood out prominently for good climbs, Marvin (Brough Superior) went up well (but was subsequently seen to descend the hill, evidently having retired), Glendinning (Rex) was good, also Tessier (Bat) and Brandon (Triumph). Cross (A.J.S.) bumped in the saddle, but got up well, also Michaelis (Harley-Davidson) and Selby (Harley-Davidson), the latter on a fine sporting turnout with disc wheels.

Dust—as a Disguise.

The state of the competitors, due to the dusty roads, was a sight to behold. Owing to the thick layer of dust, spectators had difficulty in recognising their acquaintances. Pryor (Omega-Villiers) seemed content to let his machine konk out—he was very late—and Milner (8 Sunbeam sc.) was another to stop due to all appearances to mishandling of the air lever. J. Chater-Lea (8 Chater-Lea sc.) made an excellent ascent. Guiver (Matchless) and Grange (Bradbury) likewise made no mistake; Ellis (whose Matchless was misfiring) looked worried, but got up all right: Mackenzie (Humber) did well; while Julian (Harley-Davidson) must surely have been the fastest of the sidecarists. A little diversion was provided by a non-competing Enfield sc. ascending with a passenger seated in a bucket seat on the carrier carrying a kettle. Four hours of hill-climbing—no wonder some spectators were getting thirsty! J. Richardson, on one of the new 5 h.p. Lea-Francis sidecars, did well, also Ross and Nott (Matchless). Kay (Royal Ruby) knocked slightly, but got up comfortably enough; Saddington (James) as usual made no mistake; Bryson (Royal Enfield) shed his passenger; Penney (7 A.J.S.) went up comfortably; Jensen (Harley-Davidson) was fast,

A magneto shield on H. Gibson's Royal Ruby, made from a piece of old inner tube opened out and held in position by an elastic band.

also Watson (6 Ariel). Masters (Harley-Davidson) was hindered at first through overhauling too rapidly another competitor, and finally stopped momentarily on the very crest, apparently due to a choked jet. D. Wright (Norton sc.), by dint of skilled driving to avoid a non-competitor, made a fine climb. Goodfellow (6 Bradbury sc.) also just managed to avoid the obstruction. Freeman (8 Sunbeam sc.) stopped; Attwood (Norton) did well; Taylor (8 Blackburne) stopped and yet restarted without difficulty; Bell (A.J.S.) climbed comfortably; Pehrson, on the big two-stroke Dunelt, was slow but sure; Bosworth (flat twin Brough) did well; also White (8 Sunbeam).

W. H. Bashall (on the Martinsyde) swept up with ease, emitting a fine crackle. Hemy (A.J.S.) made no mistake, followed by the first of the three-wheeled runabouts. S. Hall (on a 10 Morgan), who was quite fast, only just avoided a "fallen" sidecarist, Reeves (Triumph sc.). When another

R. Croucher (7-9 Coventry Premier) arrived at Moffat with an extra passenger aboard. Observe the twin side lamps known as the Screenlight.

The London-Edinburgh Run.—

bunch appeared round the corner, with two sidecars blocking their path, the excitement was intense, many small boys, anxious for all to have a fair chance, yelling their hardest in the fond hope of clearing the course. In a way, it was unfortunate, and yet fortunate, that the little 2¼ h.p. Levis sidecar was among the bunch; but, driven by G. S. Davison, the little two-stroke successfully accounted for the gradient—surely the most remarkable performance of the day. Pugh (Triumph) and Bradbury (Norton) were good, Robbins (8 Matchless) stopped, Townsend (P. and M. sc.) did well, but Bullus (on a sister machine) his time came to a standstill. Hinde (A.J.S.) and Jacobs (Rex) followed in excellent style, also Le Grand (Rex), though the latter was passed by Spouse (T.B.), two other T.B. runabouts following with splendid ascents. The engine of James's Morgan spluttered, but kept going. Hallitt (L.S.D.) made no mistake, and Mr. and Mrs. Morgan (on a smart primrose-finished Morgan) went up with ease. Tait (Harley-Davidson) stopped, but Goodwin (Castle Three) made a splendid climb. When Opperman (Corona sc.) stopped, he baulked Biggs (A.J.S. sc.), the latter in turn baulking Douglas (T.B.). When Core (Morgan) conked out, the crowd of small boys sent up the usual yell to clear the road for Line (New Hudson), who actually ascended nearly all the steep section on middle gear. Fletcher (4 Douglas sc.) stopped, Newman (Morgan) did well, and Henry (Castle Three) had to shed his passenger. Richards (Morgan) stopped at an awkward moment, for two cars and a runabout were following; but Croucher (Coventry Premier) managed to get by.

J. A. Hilger (5 Rover) and H. F. Edwards (Coulson-B) arriving at Moffat

Then followed the cars, the individual performances of which will be found detailed in *The Autocar* on sale to-morrow (Friday).

Including cars, 287 were officially noted to have reached Buttertubs Pass.

INCIDENTALLY—

During the night the silence of the N.U.T.'s was particularly noticeable. One of them was ridden by D. S. Baddeley, whose brother rode a P. and M. These two are the only motor cycle riding members of the M.C.C. who have competed in thirteen consecutive London-Edinburgh runs, gaining gold medals on each occasion. Van Hooydonk has competed in all fourteen, but in later years has driven a car.

Much of the country traversed was particularly beautiful, and the views on the moors after Buttertubs were very fine. Here a strong side wind was found to be very trying by the solo men, and one rider, E. Foster (Raleigh), had a narrow escape from being blown over. The journey over the Devil's Beef Tub Pass after Moffat was very fine, as the weather was just clearing after the rain.

G. Nott (Matchless sc.) broke an inlet valve spring shortly before reaching Grantham, and lost an hour.

Several people remarked that this has been the most interesting of all Edinburgh runs, and Mr. Wells, the trials hon. secretary, is deserving of hearty congratulations on having found so sporting a course.

Motor cyclist spectators on the route were particularly numerous at all hours of the day and night. We have seldom seen more on the road than rode out from Edinburgh to watch the competitors coming in.

B. F. C. Fellowes (2¾ De Dion) again finished his second Edinburgh run to time. His engine is just a few months older than he is. Is there an older motor bicycle which can successfully compete with modern mounts?

When the results are published next week we fear a heavy toll will be exacted by the secret checks.

Complete List of the 170 Survivors out of 204 Starters.

The blanks in the numbers indicate non-starters and retirements.

FROM THE MIDLANDS TO LAND'S END.

The Birmingham M.C.C. Trial for the Lycett Trophy.

STARTING from the Austin Works, near Birmingham, there were in all forty-eight entrants for the Birmingham M.C.C.'s annual event for the Lycett Trophy. Ideal weather conditions prevailed, and the usually dreaded Porlock Hill was, under these circumstances, regarded by most with pleasurable anticipation.

Major R. V. C. Brook and Mr. L. Clarke officiated as starters, and Mr. Browne, of the Para Rubber Co., attended to the numbering of machines and sealing of competitors' watches.

There were six non-starters—Messrs. H. R. Guest and G. Gold, of Hoskison Motors, J. F. Gardner (8 Brough Superior), E. S. Stinchcombe (2¾ Wooler), and J. Featherstone, of whom no particulars were received, and No. 13—a myth. T. Stevens (7 James sc.) arrived late, but immediately checked out and had his watch sealed, etc., afterwards.

At the time check, seven miles before Porlock, W. A. Carr failed to check in, but arrived at Porlock last on the list. T. F. Watson (3½ Norton), E. J. Neal (2½ Metro-Tyler), J. N. Roberts (3 A.B.C.), and H. B. Denley (10 Rhode) did not put in an appearance at all, thus leaving thirty-eight competitors to "carry on."

The surface of Porlock Hill was all that could be wished for, being well rolled and far better than many of the main road surfaces. The weather being exceptionally fine, and the hill in such good condition, some fine performances were witnessed.

R. W. Duke, the captain, arrived first with his all-chain drive Triumph, and confidently purred up, taking the corners well. C. S. Lane (A.J.S. sc.) followed on and seemed very intent on cutting part of the first hairpin away, but completed the climb successfully. Four James machines—three sidecars, and one solo—steered good courses and toured up without any signs of trouble.

Good and Bad Climbs.

J. Bacon, on a 3½ h.p. Sunbeam sidecar, incidentally fitted with a "double toned" exhaust pipe, failed to make a clean climb, whilst Messrs. J. R. Fellows and Rowland Fellows, on 3½ h.p. Sunbeams (solo), made exceptionally fine climbs—undoubtedly the fastest times of the day. Kershaw's luck was out in this run. Previous to arriving at Porlock he had burst his back tyre, and when he arrived at the first bend with his 8 h.p. Verus-Blackburne he was brought to a standstill on account of his driving chain breaking.

A. T. Cooper, on a Matchless outfit, charged into the bank on the first bend and came to a standstill. He attempted to get away again but was handicapped by the foot-controlled clutch on the near side. R. T. Cooke (4 Triumph) went up very gingerly. R. E. Pugh, on a 2½ h.p. Levis, had the misfortune to break his belt on the top portion of the hill. F. Whitworth, on his Coventry Premier, made a very quiet ascent.

Some exciting incidents were witnessed. For instance, L. Paynter on a 3½ h.p. Norton came along juggling with his generator, which had come adrift, and was hanging down the side of the machine. He was grabbing and dropping it by turns, until at the last bend it fell on his pump, loosened it, and caused it to foul his wheel, thus bringing him down. W. A. Carr caused the most excitement. He arrived late, and came round the first bend at such a speed that he could not keep all three wheels on the road. He went on two wheels for a distance of about twenty yards; unfortunately, his Morgan came to a standstill fifty yards from the last check.

Many competitors changed down too late, and waited until they were on top of the hairpin, when they were in need of both hands for careful steering. Porlock was the scene of the speed test for deciding the winners, but the figures are not yet available.

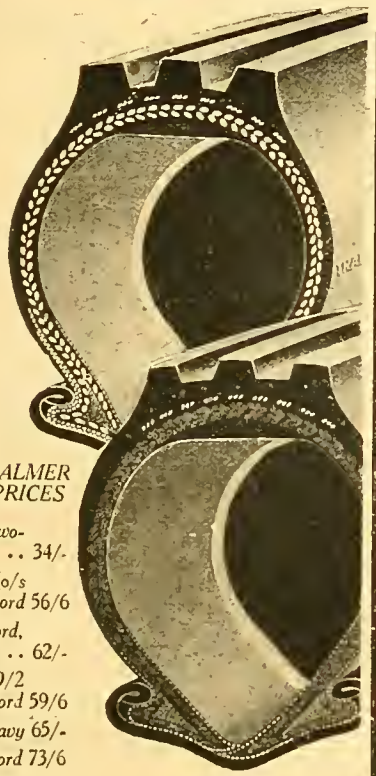
The local motor cyclists rendered yeoman service.

HILL-CLIMB AT ORTON SCAR.

Westmorland Club unfortunate. Postponed at Easter, curtailed at Whitsuntide.

GLORIOUS weather attended the Westmorland's Motor Cycle Club's open reliability trial, which, postponed from Easter, took place at Orton Scar on Monday last. Despite counter attractions, the event was well attended, the spectators totalling nearly 4,000.

Orton Scar is situated in one of the loveliest places in North Westmorland, and the celebrated hill is one of the stiffest propositions motorists in that part of the country have to tackle. The course was about 1,200 yards in length, and the steepest gradient is at the bottom, where for close upon 300 yards, an incline of 1 in 8 had to be negotiated. Then, at an angle of about 55°, there was a blind corner, and for the remainder the course was about 1 in 30.



To those not knowing the bend, it was rather difficult to negotiate, but there was no real danger to be encountered. Many of the well-known manufacturers were represented, chief amongst them being de la Hay, the Sunbeam exponent. Splendid racing was witnessed until the fifth event was reached, when Guy Jefferys, the secretary of the trials, and one of the most popular members of the club, met with an accident on taking the bend. He climbed the bank, and his machine ran between an H telegraph post, when he was hurled through the truss rods. Jefferys was immediately conveyed to Westmorland County Hospital, and the rest of the programme was abandoned. Results:

275 c.c. SOLO.—1, G. Davison (2¼ Levis), 57s. 500 c.c. SIDECARS.—1, T. C. de la Hay (3½ Sunbeam sc.); 2, H. Hassell (3½ Norton sc.).

1,000 c.c. SIDECARS.—1, F. Dixon (7-9 Harley-Davidson sc.), 48s.; 2, T. C. de la Hay (3½ Sunbeam), 48⅘s.; 3, H. Hassell (3½ Norton), 48⅘s.

A Norton exponent, H. Petty, and his wife, at the Leicester and District M.C.C. hill-climb last Saturday.

PALMER CORD TYRES

Why?

Why do the world record breakers in motor cycle races all over the globe insist on fitting

RENOLD CHAINS

Because—

Why did every entrant who rode a chain driven machine in last year's T.T. Races fit Renold Chains?

Every discriminating motor cyclist realises that only the best is good enough when reliability must predominate.

Speed or reliability Trials—track or road—Renold Chains are designed to meet all conditions.

Write at once for new illustrated leaflet, giving hints on maintenance, repairs, and the new methods of fitting spare parts.

GENERAL TRADE.

AUCTION Sales.—Palmer's Garage, Tooting, the oldest solely motor auction rooms in London. Terms 7½%, not chargeable if automobile unsold. Motor cycles and cars bought and sold for cash. Nearest goods stations: Falcon Lane, L. and N.W.R.; Wimbledon, L. and S.W.R. and G.W.R.—Sole address: Palmer's Garage, Tooting, London. [8852

WANTED.

STURMEY-ARCHER 3-speed Gear Box.—31, Silver St., Enfield. [8511

TRIUMPH Back Stays and Sturmey Gear Box.—9, Percy Rd., W.12. [8718

N.S.U. Gear, fit Triumph, good condition, cheap for cash.—3, Oxford St., Kettering. [X2338

WANTED, motor cycle or Ford; cheap.—H. Jowett, 41, Falmouth Av., Bradford. [X2415

PALMER'S Garage Tooting.—The pre-eminent place for disposing of motor cycles.

PALMER'S Garage, Tooting, will make you a cash offer at sight.

PALMER'S Garage, Tooting.—You will be sure of a good cheque if you sell your machine at Palmer's Garage.

PALMER'S Garage, Tooting.—Thousands of men have sold their machines here.

PALMER'S Garage, Tooting, make a speciality of motor cycles in the weekly auction sale every Thursday at 2.

PALMER'S Garage, Tooting.—Auction fee for motor cycles under £50 reserve, 5/-; over £50 reserve, 10/-. No garage charge is incurred until 7 days' notice is given

PALMER'S Garage, Tooting, will collect machines from any London railway station. The auction sale is held every Thursday, commencing 2 p.m. [8853

2¾h.p. Douglas, 1915-20, G.P. Morgan; cheap.—Write, Hill, H., 63, Solon Rd., Brixton. [8843

MORGAN de Luxe, w.c., 1920, wanted.—Val, 52, Thornhill Rd., Islington, London. [8876

WANTED, B.S.A. second-hand sidecar chassis.—Apply, 37, Myddleton Rd., Hornsey. [8768

N.S.U. Gear, any condition, or parts; also Grados, etc.—Box 4,104, c/o *The Motor Cycle.* [8975

1919 Grand Prix Morgan; instalments; Sevenoaks district.—Box 4,055, c/o *The Motor Cycle.* [8528

WANTED, good solo or combination.—Catton, 12, Rockmead Rd., Hackney. Dalston 2918. [8474

SWAN Sporting Sidecar, suitable for Triumph.—Gillman, 22, Rowden Rd., Beckenham, Kent. [8557

WANTED, Clyno interchangeable wheel rim for 65×650 tyre.—5, Newnham St., Bedford. [8777

WANTED, bottom back stays and wheel, complete, for countershaft.—11, Ashburton Hill, Cork. [8590

3½h.p. Sunbeam Combination, recent model.—Write, Roes, Hatfield, Avenue Elmers, Surbiton. [8642

WANTED, sound 3½-4½h.p. combination, about £65 cash, no dealers.—Box 608, c/o *The Motor Cycle.* [8614

WANTED, motor scooter; exchange good push bike and gramophone.—Box 4,102, c/o *The Motor Cycle.* [8973

WANTED, parts to complete P. and M. in quantities, cash waiting.—Inman, Othello St., Liverpool. [6700

WANTED.

PALMER'S Motor Auction every Thursday at 2; entries invited.—Palmer's Garage, Tooting.

PALMER'S Motor Auction every Thursday at 2; entries invited.—Palmer's Garage, Tooting.

PALMER'S Motor Auction every Thursday at 2; entries invited.—Palmer's Garage, Tooting.

PALMER'S Motor Auction every Thursday at 2; entries invited.—Palmer's Garage, Tooting.

PALMER'S Motor Auction every Thursday at 2; entries invited.—Palmer's Garage, Tooting.

PALMER'S Motor Auction every Thursday at 2; entries invited.—Palmer's Garage, Tooting. [8851

WANTED, second-hand Morgans, in good condition. —Rey, 378-384, Euston Rd. 'Phone: Museum 6436. [5102

WANTED, good motor cycle or combination; cash. —C.S., 14, Swaton Rd., Bow, E.3. Tel.: E. 3155. [9016

WANTED, twin mag., 60°.—Send price and particulars to 3, Aiskell St., South Millfield, Sunderland. [8725

WANTED, gear box for lightweight, Grado countershaft preferred.—Walter, Kiaora, West Moors, Dorset. [8464

WANTED, Triumph bottom and top back stays, suit hub gear; approval.—Chalmers, 65, Brandon St., Hamilton. [8681

WANTED, A.J.S.; exchange 1920 Harley combination and cash.—45, Waterlow Rd., Highgate Hill. [8503

WANTED, 1920-21 Combination or solo; cash waiting.—Mosedale, 30, Canterbury Rd., West Kilburn, N.W.6. [6105

WANTED, 4-cyl. F.N.'s, T.A.C.'s, T.M.C.'s, Hendersons.—Wandsworth Motor Exchange, Ebner St., Wandsworth. [3151

WANTED, Douglas or similar mount, in good order; cheap.—Particulars to Smith, 20, Christchurch Rd., Newport. [8621

WANTED, Red Indians, Harley-Davidsons.—Wandsworth Motor Exchange, Ebner St., Wandsworth (Town Station). [3152

CONNECTING Rods, pistons, bushes, 8h.p. J.A.P. (1912), Zenith gear worms.—A. H. Adams, Shipston-on-Stour. [8818

WANTED, Simplex motor attachment, must be first-class condition, to put on lady's cycle.—Arscott, 178, West Parade, Lincoln. [8471

WANTED, good up-to-date second-hand motor cycle accessories; state particulars and price.—Service Co., 292, High Holborn, London, W.C.1. [0172

WANTED, 3½h.p. Triumph frame, tank, and gear box, together or separate.—Andrews, Teviot Cottage, Saltburn, near Invergordon, Ross-shire. [X2388

ALLBER Motors.—Bring your machines to us; we are spot cash buyers of good machines, or we sell on commission for you; exchanges entertained.

ALLBER Motors, Thorosett Rd., Earlsfield, London, S.W. (opposite Earlsfield Station). 'Phone: Latchmere 4388. [2852

CASH Waiting: solo and combinations, good prices given.—Write, 'phone, or call, Edwards, 50, Harrington Rd., South Kensington. 'Phone: Ken. 3709 [0604

TRIUMPH Engine with magneto (or separate), 1918-21, good condition; also nearly new 1910 cylinder (Triumph).—Box 4,074, c/o *The Motor Cycle.* [8583

1920-21 Matchless-Jap Magdyno Combination, new, or very near.—Price and full particulars to Turner, 27, Blackburn Rd., Church, Lancashire. [X2414

WANTED, 1920 P. and M. Combination, must be guaranteed perfect, full equipment; lowest for cash.—Letters only, 40, Barclay Rd., Leytonstone, E.11. [8728

W. T. DUNN, Ltd., 326, Euston Rd., N.W.1, require unlimited quantity modern solos, combinations, Morgans, light cars, etc.; top prices paid; cash on sight.—'Phone: Museum 5391, write, or call. [0332

WANTED, N.S.U., Brampton, Mabon, or hub gears; also water-cooled engines (single-cyl.), air-cooled single and twin; old motor cycles and parts, cheap.—17, Wilcox Rd., South Lambeth, London, S.W.8. [7753

WHO Pays the Best Price for second-hand motor cycles in England? We do. Please offer us your cycle and combination; cash paid on sight.—Percy and Co., 314, Euston Rd., N.W. 'Phone: Museum 1337. [8908

RELIABLE Sidecar Machine Wanted for tradesman's carrier, mechanically sound; exchange motor mudguards (new), domed, with valance, for Singer and other light cars.—Tidd Bros., Motor Panel Beaters, Ashford, Middlesex. [8450

F.O.C.H. still pays highest prices for sound machines. Bring 'bus along and take cash away; exchanges arranged.—5, Heath St., Hampstead (near Hampstead Tube Station). 'Phone: Hampstead 3752. Hours 9-7, including Saturdays. [8815

WANTED, all kinds of motor goods, new and second-hand, any condition; job stocks bought to any amount; garage tools and accessories.—Montague's Motor Mart, 85-87, London Rd., Manchester. 'Phone: 7745 Central. [8682

The Cooling of Motor Cycle Engines.

IN this issue we publish the first part of an informative article on the cooling of motor cycle engines—a subject which is exercising the minds of most designers. By them, we know that it will be read with more than ordinary interest, although it may be that the views expressed will not be unanimously accepted. Lay readers, too, will find much upon which they may debate, and, perhaps, it is well to remind them that the author is an idealist with very advanced views, who, having in mind the wonderful possibilities of the internal combustion engine in the future, may, possibly, be accused of underestimating the really remarkable stage of perfection which has already been reached.

That many of the author's contentions are true will be appreciated by all our readers, particularly the references to lack of silence—mechanical and exhaust—as compared with the engine of a car. We agree that the simplicity of air-cooling must be retained, and that comparative silence can be obtained with air-cooled engines has already been proved by certain manufacturers of air-cooled cars. These vehicles, it is true, are not, in the car enthusiast's opinion, the last word as regards silence, for often comments are heard anent their slight tappet noise. On the other hand, the motor cyclist regards these engines as almost ideal, which goes to show that the standards of perfection in the two classes of motorists differ very considerably.

It is strange, but true, that all present-day motor cyclists do not desire silence; that such a feature is highly desirable cannot be denied by all who wish to see the motor cycle movement expand to the possibilities awaiting it, when the economical machine really takes its rightful place as a utilitarian vehicle.

The author of the article under review points out that economically present-day engines fall short of the possible maximum in this respect, and while we think that great strides will be made in increasing their efficiency, in the meantime the majority of motor cyclists will not grumble if their machines continue to transport them about 100 miles at a cost of 3s. 6d.

Improved cooling undoubtedly will tend to bring about many modifications in other directions, for this important question determines the size of the engine. Size governs the weight of the power plant and of the machine as a whole: in the meantime we think all motor cyclists will agree that we have much for which we can thank the British motor cycle industry in producing the machines we ride to-day, and which are steadily improving in efficiency—even if they fall short of the ideal.

To such advanced thinkers as our contributor posterity may owe a great deal. While they continue to give to the world the results of their research, the motor cycle movement must benefit: for the so-called ideals of to-day may be accepted to-morrow as the essentials.

Next Month's Tourist Trophy Races.

LAST week rumours were current regarding the postponement of the Tourist Trophy Races as a result of the coal strike. At the moment of going to press, however, such rumours appear to be devoid of foundation, as, having stocks of coal, the Isle of Man Steam Packet Co. has agreed to maintain a daily service between Liverpool and the Isle of Man during the T.T. week, June 13th to 18th.

We understand that this arrangement is due to the efforts of the Auto-Cycle Union, which approached the Government regarding coal supplies, and the support of the Mines Department has been promised in the event of a shortage of fuel.

The Isle of Man has suffered very keenly this year through the lack of visitors, Whitsuntide being one of the "blackest" holiday periods in its history.

An Index to the advertisements in this issue will be found on the page facing the back cover.

Flywheel Magnetos.

THE flywheel magneto appears to be quite a dazzling success so far as ignition is concerned, but more than one firm has experienced a little difficulty in getting sufficient output to feed the lamps as well as the sparking plug. However, at least one inventor seems to have solved the double problem, and this fascinating type of electrical outfit should be very popular in the near future.

Perfecting the "Sparklight."

THE B.T.H. people are devoting the most meticulous attention to the development of their "Sparklight" lamp outfit for two-strokes, and I hear that before long we may be able to obtain a new edition suited to four-stroke engines. My own two-stroke outfit provoked no criticism beyond the fact that it was a little difficult to extricate the battery from its aluminium case in the event of more acid being required. The connections for the various leads were not too accessible, and the parts were a very close fit in the case. When I drew the makers' attention to this, I found they had already designed a better battery box fitted with a terminal board, so that it is only necessary to disconnect a couple of 3in. wires when the battery is to be removed for any purpose. The pick-up fittings have also been improved by the substitution of a lighter brush and the provision of greater clearance for the clock spring. A two-stroke fitted with such a lighting outfit is quite the most delightful utility mount for short distance work.

Stock Machines in the Six Days?

THE experiment with "stock" machines in the A.C.U. One Day Trial has led many motor cyclists to emphasise the extreme value which similar procedure would have in the Six Days. The idea is not so ridiculous as some pooh-poohers would suppose. It must be a good ten years since an entrant in a Scottish Six Days—Mr. W. Westwood, if memory does not fail me—was disappointed as to delivery of the machine which he intended to compete with, and after purchasing a Triumph from an agent's stock forty-eight hours before the trial started, won a gold medal after a no-trouble ride. I do not know whether the A.C.U. will have the hardihood to institute such a class in the 1921 Six Days; but there cannot be any doubt that if a firm asks the A.C.U. to select three machines at random from agents' stocks, and asks a club to nominate three amateur riders accustomed to the make of machine concerned, there would be a good sporting chance of an unparalleled advertisement. Moreover, I know more than one machine which ought to emerge triumphantly from such an ordeal, and which would be well in the running for the team prize so long as it enjoyed its fair share of luck. Stock machines of to-day are a great deal nearer the efficiency level of trade riders' "specials" than some jaundiced pessimists suppose. To hear some people talk, and to read the rubbish that is sometimes written, one would suppose that a wise rider invariably dismantles a new machine before he puts it on the road. *Pour moi*, I ride machines as they are delivered; and I seldom strike anything more than petty trouble inside 5,000 miles.

Duffers in Trials.

ONE or two of the officials concerned in managing the Edinburgh run returned to town with rather dismal impressions of the driving skill of the less experienced amateur riders, and with a feeling that a good many machines are still insufficiently braked. One competition expert made the downright remark that trial entries are becoming too large, and that they attract far too many dud riders—some sort of qualifying test is, in his opinion, necessary before a man should be allowed to compete in a "24."

And Brakes.

THE ordinary designer undoubtedly finds himself in rather a quandary when he settles the brake layout of a machine. If the stock mount as sold to the public is equipped with powerful, quick-acting brakes, quite a number of the firm's customers will "crash" before they have developed into adepts, for rash brakework on a two-wheeler spells spills. I think the real solution is to design brakes which will not lock the wheels until tremendous muscular force is applied. In a sudden emergency the half-novice makes a quick, instinctive grab at his brakes, and if that automatic snatch locks the wheels, a spill results. If this nervous grab merely applied the brakes mildly and sustained muscular effort were needed to stop the machine altogether, he would be given a fraction of a second in which to collect his wits. This brief interval would save him from a spill on the one hand and a collision on the other. Technically, such an arrangement of the brake leverage is quite possible.

Splashing Them Out.

TRIALS organisers regard the watersplash as a positive godsend nowadays, and the committee man who can discover two or three new ones—the deeper, the better—is a hot candidate for next year's presidency. The popularity of splashes is a mute tribute to the high quality of the modern moto

Ixion's "MOTOR CYCLE REMINISCENCES" have lately been published in book form, price 5s. 3d. post free, from "The Motor Cycle" Offices, 20, Tudor Street, E.C.4.

Occasional Comments.

cycle. Hills can no longer stop it—not even if by hill we imply the back stairs to the lair of the chamois. But a deep splash is something of a lottery for the stoutest rider on the best machine—particularly so if there be a miniature weir, a lot of green weed, and a 3ft. pothole concealed under the turbid flood. Nominally, the watersplash is supposed to possess a high technical value in developing waterproof ignitions and transmissions. Actually, its chief function is to amuse the crowd and to protect the coffers of the organising club. I recall one particularly atrocious splash last year—miles and miles from anywhere. Beside it lay a neat bridge, on which were collected myself and two enthusiasts who had ridden miles to watch the fun. Rider after rider ticked cautiously up, eyed the bridge longingly, scanned the group of spectators vengefully, recognised me for a trumpery pressman but smelt something official about the other two. In they went. Off they came. Emerging, and wringing the water from their tresses, they told my two companions what they thought of them. Meekly my consorts explained that they were mere onlookers. *Then* the swear words crackled like the super sparks in a high power Marconi outfit.

Waterproofing the 'Bus.

ALL the same, forgetfulness seems to have attacked the trade on the important question of waterproofing a machine, so that it can safely be left in the open during a rain storm—an emergency which befalls every user during the season, and is a weekly or daily occurrence with many owners. There are three items which require protection, viz.:

1. The sparking plug. (Generally ignored.)
2. The carburetter. (Top feed types are usually safe; bottom feed types often give trouble.)
3. The magneto.

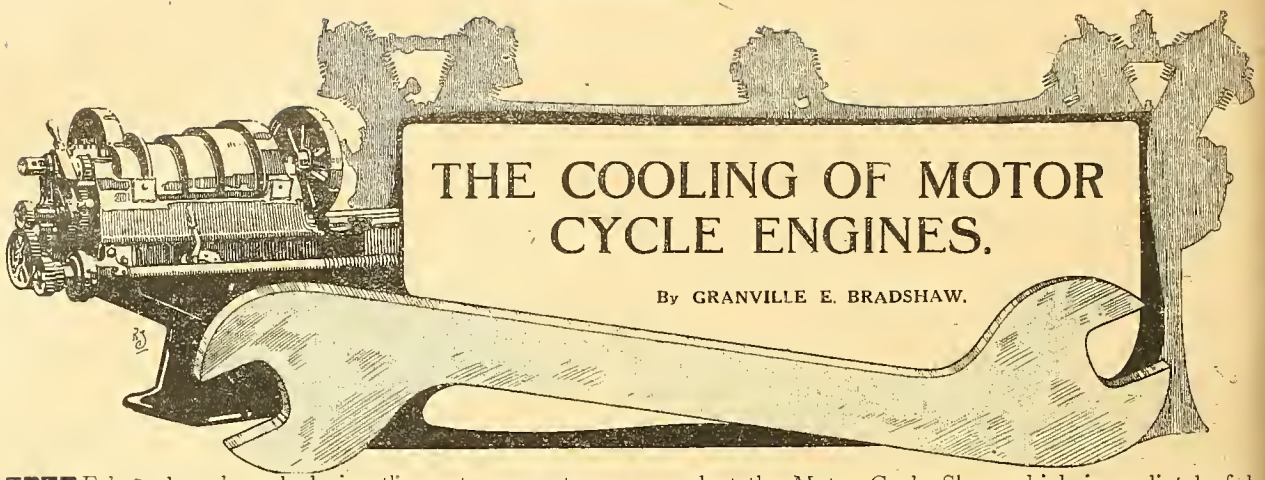
The 'bus which I at present use for "multi-stop" work is perfectly hopeless in these respects. I can manage the plug easily enough by carrying a dry spare in my pocket, fitting a waterproof pattern, or adding a Hunt "umbrella"; but a duffer might have bought the 'bus, and experienced stacks of trouble. To weatherproof the carburetter in this case is a real problem, as its shape enables it to catch the maximum amount of water, and to guide the water to the point where it will do most harm. The alleged waterproof magneto has a deepish circular recess round the point at which the high tension lead enters the casing, and until I puttied up this recess with candle grease and varnished it over with shellac, the machine was sometimes off duty after exposure. So many machines are now being bought for utilitarian purposes that these points are important.

Rained Out.

MOST English months seem to have dual personalities like the famous Jekyll and Hyde. Take the past month, for example. I left home in such blistering sunshine that I disdained my overalls. My ladylove's villa has no garage, and I left the machine—well, I believe an American would put it "down the side walk." Presently the rain descended and the winds blew. I happened to be unconscious of the external climatic conditions. When I emerged, my saddle was sodden, and not a bang could possibly be extorted from a 'bus which is normally a ready starter. Being—since the war and a Pelman course—a man of undoubted push and go, I hastily extracted the sparking plug, baked it in *her* oven for a minute or two, turned on the petrol, took the last tender farewells, and jazzed gaily up the road. Not a bang.

On examination, the bush of the magneto contact breaker rocker had swelled up in sudden sympathy with the increased humidity of the atmosphere. To think that I specified this particular magneto because its bush was stated to be "non hygroscopic."

To complete my opening paragraph, later that evening there were nine degrees of frost. I remember hearing an R.E. quartermaster sergeant say that all poets were crazy. Was it Browning who sang



"Oh! To be in England
Now that April's here"?

Must have been a rotten April wherever he was.

CONTRASTS IN CORNERING.

Scenes at any trial.

THE COOLING OF MOTOR CYCLE ENGINES.

By GRANVILLE E. BRADSHAW.

Few have made such a close study of the problem of air-cooling as has Mr. Granville E. Bradshaw, and the views of this well-known designer are bound to be read with interest. That the average air-cooled engine uses from 20% to 80% too much petrol per b.h.p. is one of Mr. Bradshaw's contentions, while the advantages of cooling the crank case adequately are dealt with at length.

WE have heard much during the past year or two about the wonderful strides made in air-cooling in connection with aero engines, and we have been told (particularly in connection with cars) of the big improvements we can expect as the outcome of all this knowledge and experience, and yet—when one comes to look round—there is precious little difference between the present-day air-cooled single-cylinder and that of pre-war times except in very few instances.

In fact, probably 90% of engine cylinders are identical with those of 1912, 1913, and 1914, and very nearly as many are from the same patterns machined on the same tools.

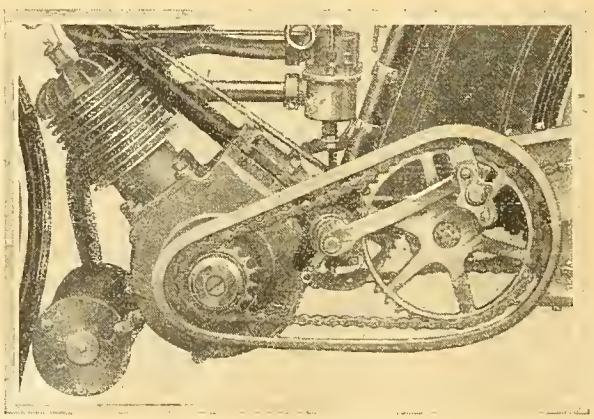
Most of our present-day engines are tarred with the same old brush—most of them are given a new lease of life by an extra pumpful of cool oil on a long hill on a midsummer's day—most of them konk occasionally under similar conditions, unless their compression ratio is so low that they develop very little power for their size and use plenty of petrol in doing it. Most of them are exactly as noisy as they used to be, and it is a significant fact that, whereas nearly all water-cooled car manufacturers are reducing the size of their engines and still improving their performance, motor cycle manufacturers are increasing their cylinder dimensions year by year.

The 500 c.c. machine is rapidly becoming a 600 c.c., and there is a tendency even in the 1,000 c.c. class (especially in America) to increase this to 1,100, 1,200, and even 1,300 c.c.

Are we, therefore, advancing as rapidly as we could—is air-cooling a fundamental handicap, and if so, why?

The unbiassed, mechanically-minded person has only to recollect what he saw at the last Car Show and at the Motor Cycle Show which immediately followed it, to be compelled to confess to himself that the motor car engine unit had progressed many years ahead of the motor cycle engine.

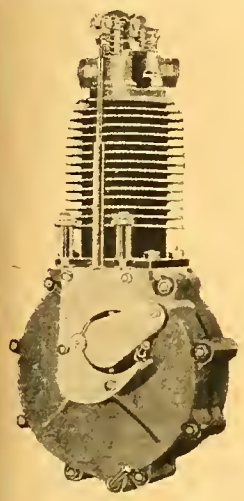
In the one Show we saw beautiful and compact complete engine units wholly enclosed and smooth externally, silent in operation and of high efficiency, self-lubricating, docile and automatic, and in the other Show we saw (with rare exceptions) exactly what we have been looking at for at least fifteen years, but with a gear box added.



Is there really any difference between the old 2¾ h.p. and 3½ h.p. m.o.v. Minerva engines of about 1903 and 1904 and the majority of present-day motor cycle power units.

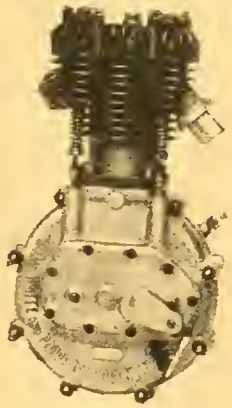
We still use the same old hand pump lubrication and two lever carburetters, but we have hung a magneto on to some part of the machine in such a way that it looks nothing more nor less than an afterthought. Worst of all, we have fitted a bicycle chain running round a small sprocket at engine speed, and we know perfectly well before we fit it that it is going to be excessively noisy.

Our cylinders are almost identical in design, and our methods of cooling are in no wise better than they were; consequently, we have little chance of improving our efficiency under touring conditions.



Where, then, do we stand to-day? Are we going to revert to water-cooling so as more completely to enclose our engines (the motor cycle engine demands more protection than does even the car engine situated as the latter is under a bonnet), or are we going to stick to our simplicity?

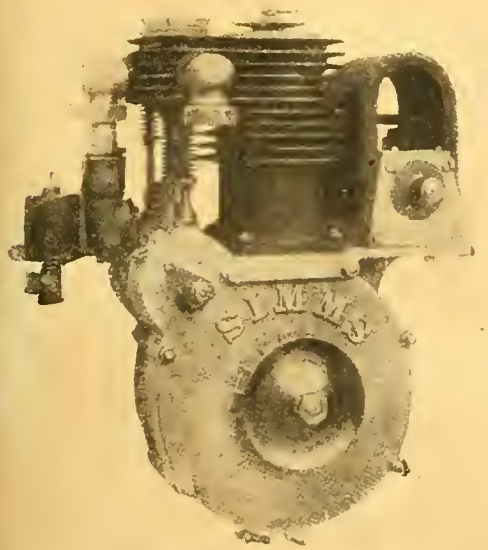
The answer, undoubtedly, is simplicity every time. Far better retain our big engines and even ask for



A popular engine two decades ago—the 3½ h.p. m.o.v. Minerva fitted to the Phœnix motor cycle in 1903. Our contributor draws attention to the striking similarity of this and the average 1921 single.

The Cooling of Motor Cycle Engines.—

A J.A.P. engine of 1903. It had mechanically-operated valves with a single tappet rod.



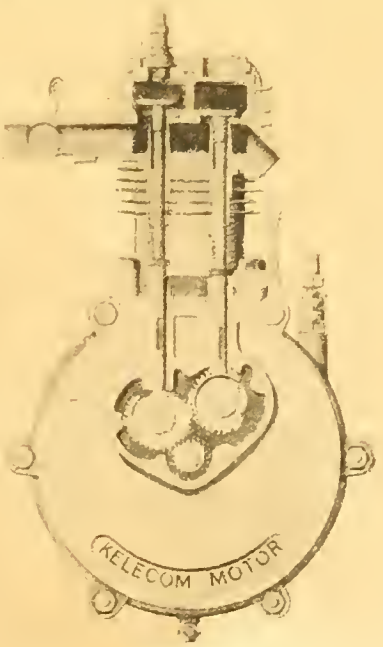
The 3½ h.p. White and Poppe of nearly twenty years ago—the original of an engine fitted to a well-known motor cycle—and very little altered in design.

ry little power from them for their capacity than ad a motor cycle with the extra cost, weight, compli-tion, and trouble of water-cooling. Already many our machines have wandered towards complication, a glance at some of the bigger mounts will show, d to add water-cooling to all this would be to add ore load to a vehicle that is rapidly becoming over-aded.

Improve Air-cooling.

Air-cooling must be retained, and all means of proving it in silence, consumption, volumetric iciency, and cleanliness of design must be sought. We shall all concede that the air-cooled cylinder s a natural handicap in that it needs a current of r directly on to it in order to enable it to function

A 75 × 75 mm. Simms engine of 1903, which had a mechanically-perated inlet valve and many features following present day ractice



properly, whereas the water-cooled engine can be stowed away and the heat can be conveyed by a pipe to any suitable place where the air happens to be plentiful; moreover, it must not be forgotten that the water around the cylinder has a deadening effect upon noise, and prevents that metallic clatter which is so prevalent in air-cooled engines.

As far as power is concerned, an air-cooled engine can compete with the best of water-cooled engines. We can also get as good consumption, with good cylinder design, but we must have adequate cooling draught and in the right place, if we are going to stick to our existing types.

It is quite true that, considering all things, present motor cycle engines function reasonably well in practice, but this is principally due to such engines being inefficient for their capacity, and due to them working most of the time on small throttle openings, and it is also true that the air-cooled engine has temperature limitations very much wider than those of a water-cooled engine, *i.e.*, the limitations of a water-cooled engine are from 32° F. to, roughly, 200° F., when steaming takes place, whilst the air-cooled engine is not injured by temperatures below zero and up to 700° F., but at these high temperatures the air-cooled engine cannot approach the modern car engine as regards economy, efficiency, and power.

Temperature Limitations.

The present-day air-cooled motor cycle cylinder is frequently running at such a temperature, and it will only continue to do so by developing low horse-power per unit of cylinder capacity combined with an extravagantly rich mixture as compared with a well-designed car engine. This is one of the reasons why two-lever carburetters did not die out of existence long ago: most riders of sidecar machines fully realising the importance of closing the air to enrich the mixture when konking commences. When running under these conditions the air-cooled engine is generally developing not more than one-half of the brake-horse-power that an efficiently cooled engine of the same size could develop, and, moreover, it is using anything from 20% to 80% more petrol per brake-horse-power than it should.

A pioneer engine, the 1903 Kelecom, which our contributor mentions as one of the prototypes of the present day motor cycle power unit.

The fact that performances on Brooklands very frequently show high volumetric efficiency has no

The Cooling of Motor Cycle Engines.—

bearing upon the subject, because in this case the cylinder is receiving air at a suitable velocity due to the speed of travel, and there is no parallel to this in ordinary touring with all mudguards and extra gadgets, and especially when tugging a sidecar up a hill on one of the lower gears.

The air-cooled engine must, therefore, stagnate, as far as high output at low consumption is concerned, just as long as we retain the present designs of cylinder combined with the present methods of cooling.

Let it be noted here that the writer is not intending to decry actual engine designs, many of which are excellent and almost equal to the best in the car world, nor is he decrying the present method of natural cooling, which is simplicity in itself, but what he does state is that the combination of the two cannot possibly give us even reasonably good efficiency.

It may surprise many readers to know that it has been conclusively proved at Farnborough that a cast iron air-cooled cylinder of normal motor cycle engine size cannot give a first-class performance under heavy

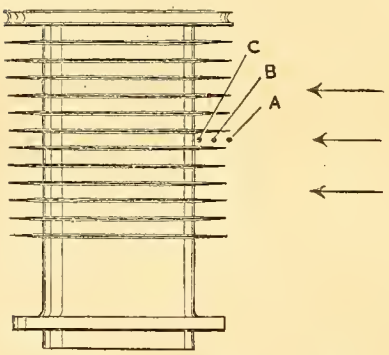


Fig. 1.—An ordinary steel cylinder, with the wind blowing exactly in a straight line. Velocity of wind at A = 60 m.p.h.; B = 47 m.p.h.; C = 35 m.p.h.

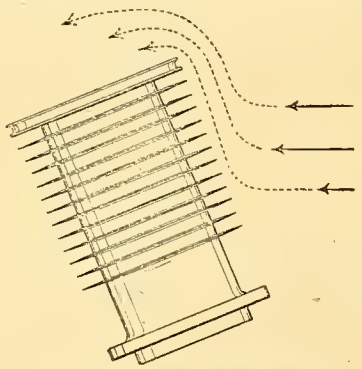

Fig. 2.—The same cylinder as fig. 1, showing how the air was found to glance off the tips of the fins when attacking the cylinder at fifteen degrees or more.

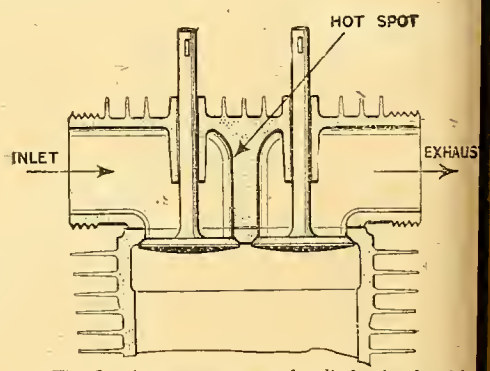

Fig. 3.—A common type of cylinder head, with the inlet and outlet ports cast solid. When the exhaust becomes very hot it beats up the whole of the inlet port, and the charge is rarified and the power falls off.

duty conditions unless it has an air blast of at least 60 m.p.h.! An engine will work satisfactorily with less air velocity than this, but only with reduced output and increased petrol consumption.

Cooling Fins Often Useless.

Before commencing to improve matters we must know our weaknesses, and a few observations made by the writer and others in connection with larger air-cooled cylinders may be helpful.

The capacity of the cooling fin has been thoroughly investigated as regards its shape, dimensions, material, and air current, and Dr. Gibson gave a fund of information in his paper before the I.A.E. some months ago. This particular information is, however, rendered almost valueless to existing designs, because the conditions are such as almost completely to neutralise the capacity of the cooling fin.

Speaking of his own observations, the writer has found that the direction of the air current plays an extremely important part in the matter, as the following will show.

Taking an air-cooled cylinder, machined from a bar of steel, with fins of the same material and of normal design, as shown in fig. 1, and subjecting this to an air current of 60 m.p.h., as shown by the arrow, the velocity of the wind at A was 60 m.p.h., at B it was 47 m.p.h., and at C (the hottest part) it was approximately 35 m.p.h. with a very carefully directed draught. With ordinary cast fins which are of greater thickness and less air space the velocity at the root of the fin was even much lower than this.

When, however, the draught was a casual one as regards direction the conditions rapidly changed, and with this draught attacking the cylinder at an angle of 15° or over, as shown in fig. 2, there was no air speed of any sort through and between the fins, but the whole current simply glanced over the tips.

Importance of Fin Disposition.

Observing that the amount of heat extracted by the air depends very largely upon the difference in temperature between the object and the air, it would appear that to remove the fins altogether and let the air blow straight on to the hot cylinder walls would not be worse than allowing it to glance over the comparatively cool tips.

In the average motor cycle engine there is no mean of directing the air current, and, considering th already mentioned leg shields, mudguards, etc., causin eddies and swirls, we cannot very well benefit by th increased surface given by the fin if the air only glanc over the tips.

The angle and disposition of the fin is, therefor a matter of considerable importance, and a V tw or inclined engine with fins cast round the barrel right angles, as is usual practice, cannot possibly g much air to it unless chutes are formed so as direct it.

In an aeroplane, of course, with a radial engi placed in the front of the machine it was an ea matter, and in an air-cooled car with a transver engine, such as the G.N., Rover, and A.B.C., the is more scope for satisfactory cooling.

For this very reason the engine in the A.B.C. mot cycle was placed transversely, and the fact that it w twice able to secure the one hour record and t two, three, four, five, and six hour as well as t 50, 100, 200, and 300 mile records in a class 25 bigger in capacity is attributed by the writ principally to the disposition of the engine in t frame and to its cylinder head fins being also exact

The Cooling of Motor Cycle Engines.—in the line of travel, thereby allowing a higher mean effective pressure than was obtained in other machines. The cooling of primary importance for the maintenance of high efficiency and low consumption is the cooling of the centre of the head. Unfortunately, and due to the disposition of the valves, valve gear, etc., this is the most difficult part to cool on the whole unit. Some designs incorporating overhead valves combine the inlet and exhaust outlet elbows in the one casting, possibly with a view to the direct conduction of some of the heat from the exhaust port to the inlet port, thereby increasing the effective radiating surface of the cylinder head. An example of this is shown in fig. 3, but for high output per cylinder capacity the writer has found this to be inefficient, because the very hot spot in the induction port produces excessive heating of the inlet gases prior to their entry into the cylinder. Any undue heating of these gases will naturally expand them, and the amount of the charge which enters the cylinder is correspondingly reduced.

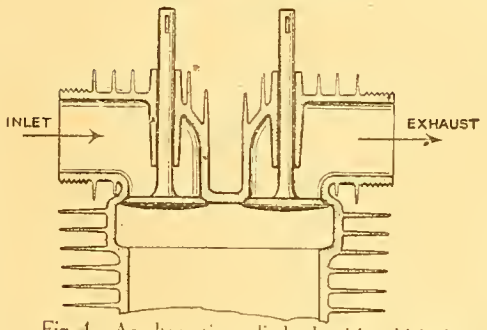

Fig. 4.—An alternative cylinder head in which the inlet port is separated as much as possible from the exhaust port, so that the heat from the exhaust does not travel directly to the inlet, and the charge is therefore cooler.

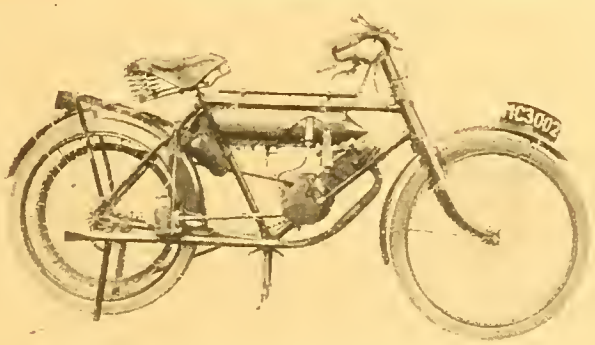
For continuity of operation of the engine this system is not bad, as it acts as an automatic governor and suitably reduces the power of the engine as it becomes excessively overloaded; but it would be a sign of weakness in air-cooling deliberately to employ such a method, as it results in a gradual falling off in power on a long hill.



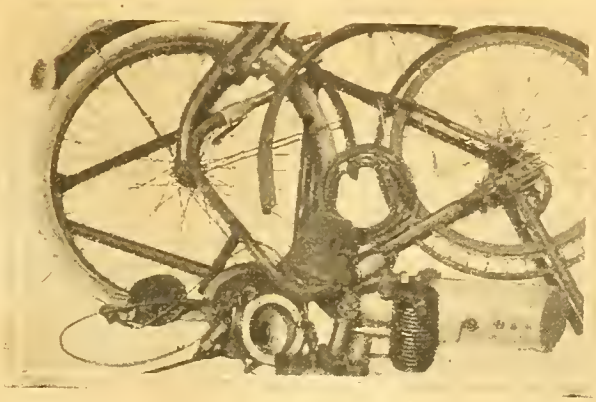
A better system for high efficiency is that shown in fig. 4, wherein the inlet and exhaust elbows are separated to the maximum extent, and the writer has even gone so far as to have a separate inlet elbow, with heat insulating washers between the elbow and the cylinder head, with considerable improvement.

(To be concluded next week.)

A POOR MAN'S MOUNT.

How a Reader Rejuvenated an Old Lightweight and Produced a Serviceable Runabout.

OWING to the inflated condition of the motor cycle market, early in 1919 I had decided to forego the pleasures of the open road for the time being. I was, however, reminded that the dismembered parts of an old Clement-Garrard were lying around somewhere amongst the strange assortment of junk that ordinarily litters my workshop. As it seemed likely that any necessary outlay would be well repaid, I decided to build up a little lightweight out of this scrap.



An expenditure of £10 converted the dump of old parts, shown in the picture below, into this quite presentable lightweight.

Those who are familiar with the Clement-Garrard engine will remember that it was clamped on to the front down tube in a sloping position. In order to get the engine as low as possible, I removed the pedalling gear, as I intended to use the machine as a light runabout only and to avoid bad hills. The frame was then sandpapered and enamelled signal blue.

The big end of the connecting rod was rebushed and a new gudgeon pin fitted. The cylinder piston and rings were perfect, and when assembled the compression was found to be excellent.

As the machine had originally been equipped with an accumulator, it seemed likely that to fit a magneto would be well worth the expense, so I obtained a small shaft-driven magneto.

The difficulty of installation was surmounted by placing the magneto on a platform made fast to one of the back wheel stays, and coupling it to a shaft driven by bevel gearing off the half-time shaft.

The parts of the old Clement-Garrard as they were found in our contributor's workshop.

The original carburetter was scrapped and replaced by an Amac.

The behaviour of this old crock in its resurrected form has exceeded my expectations. The engine develops plenty of power, and surmounts all ordinary hills with ease.

The total bill of costs amounted to £10, which included a new back tyre, saddle, magneto, and carburetter, and for this moderate outlay I have a very serviceable little machine.

TERENCE H. LAMBERT.

To Edinburgh in a Sidecar

A Passenger's Impressions of a 400 Mile Journey to Schedule.

HAVING been associated with the London-Edinburgh Run since its inception seventeen years ago we have made the journey on practically every form of motor vehicle which has competed therein, but this year for the first time the writer accomplished the trip as passenger in a sidecar.

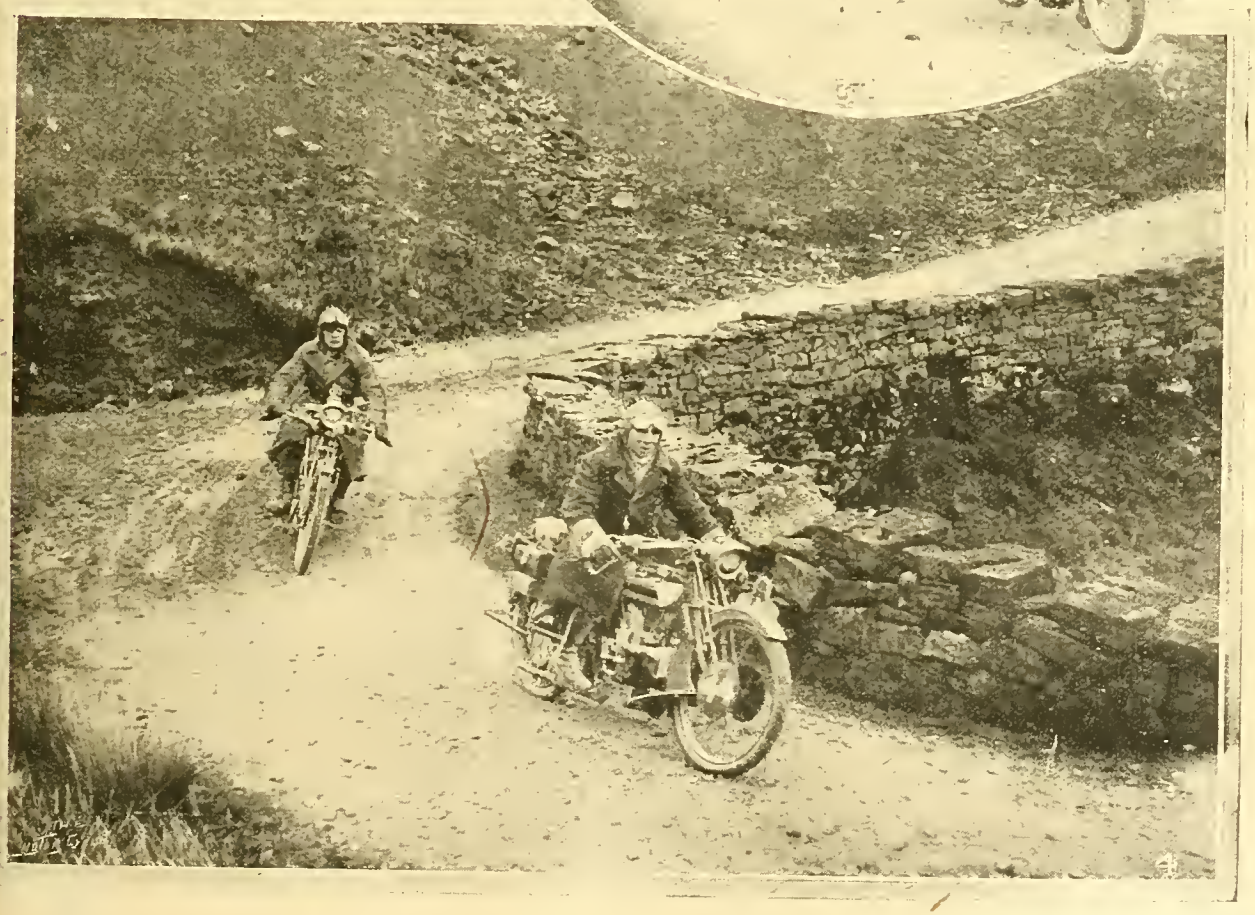
Our mount was an excellent turnout—the 8 h.p. No. 7 Chater-Lea—driven by J. Chater Lea. It was fitted with a Lucas dynamo outfit, a very comfortable sidecar body, and a most efficient Sandum windscreen, the side wings of which add greatly to one's comfort.

The machine ran with clocklike regularity from the start and throughout the night, and the pleasure of the trip was greatly enhanced by the skilful and careful manner in which the driver handled the outfit. He never attempted to pass on a corner; he descended all hills with due caution, and was as careful of his passenger's comfort as of his engine, which was never forced to work to the utmost of its capacity at any time during the run.

Though the machine ran superlatively well the journey was not without incident. Nothing much happened in the early part of the run, which was over reasonably good roads, although just outside Barnet the speedometer cable came adrift, necessitating a stop of about thirty seconds, but we began to see life after the second breakfast at Ilkley, when the difficult country was entered. The first climb of note was the ascent of Cray Ghyll on second gear. By the side of the road were noticed the remains of an ancient Ford which looked as if it had been where it was for many weeks. It was a mere skeleton of a chassis upside

It was noticeable at the start that much bigger crowds gathered round the sidecars than either cars or solo mounts Prospective purchasers no doubt took advantage of the fine opportunity for close examination and comparison of such a big array of modern mounts

OVERSEAS CONDITIONS IN THIS YEAR'S LONDON-EDINBURGH RUN.



SOLOISTS IN THE LONDON-EDINBURGH.

(1.) J. A. Watson-Bourne (4 Powell) negotiating a surprise watersplash on the moors after leaving Buttertubs. (2) G. W. Dawson (Rudge) on rough going near Thwaite. (3) After Buttertubs, the course lay over moorlands. J. C. Watson (Harley-Davidson), followed by C. F. Plowman (Sunbeam) and H. V. Bateman (Diamond). (4) W. Stevenson (3½ Brough) and T. Morgan (Triumph) rounding a bend in North Yorkshire in good style.

down and covered in rust, and everything inflammable had been burned away.

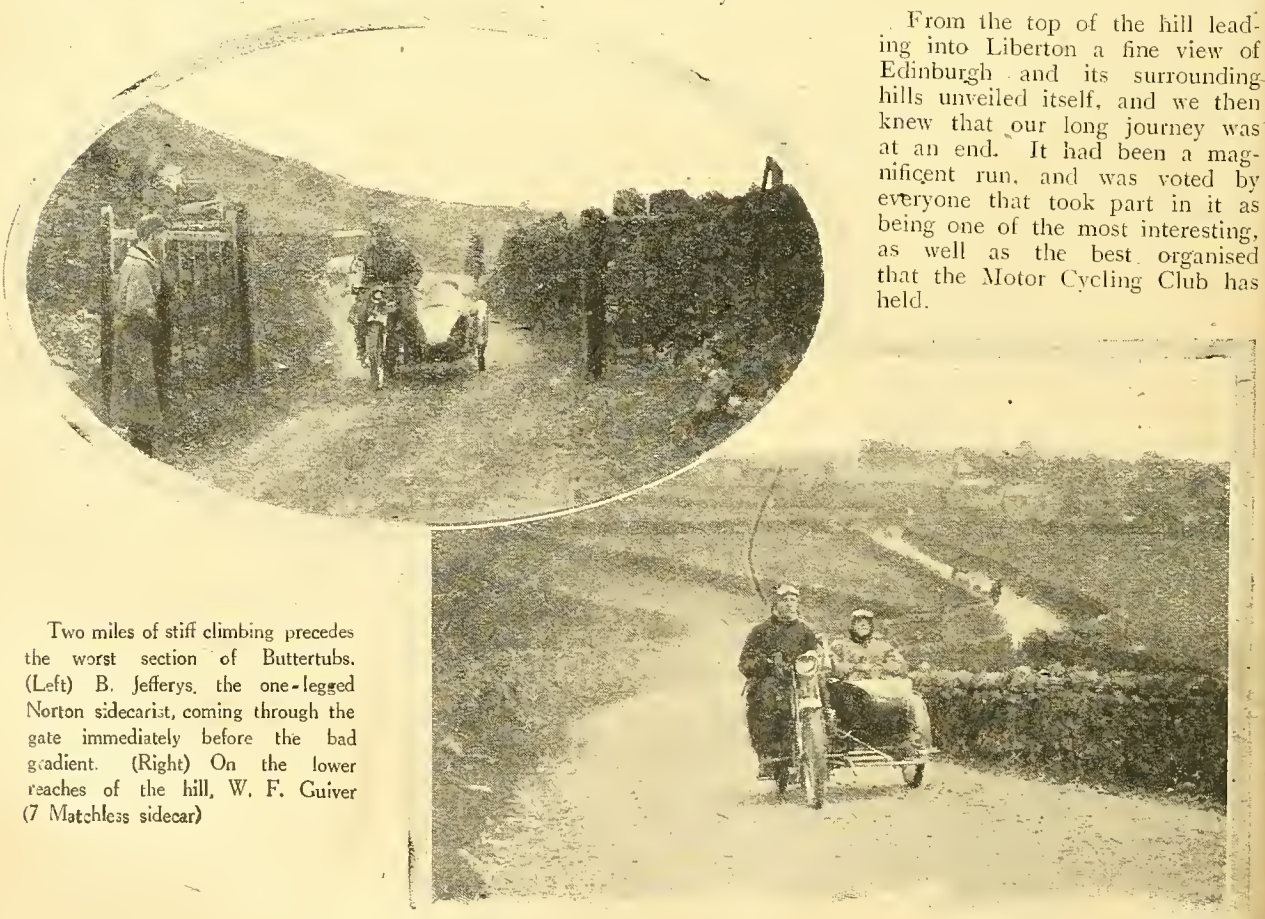
Near the summit a little misfiring was experienced. Then came the descent of Kidstones Pass, which was rather perilous, as the road was very steep and the surface very loose. As misfiring was experienced near the bottom and the cause ascertained to be due to a flooding carburetter, ten minutes were spent removing an obstruction under the float needle seating.

The one Test Hill.

Buttertubs was climbed in excellent style, but for precaution's sake a change to low was made at the top of the steepest portion; but the next hill came as a great surprise.

The road suddenly changed from quite a good one to a most inferior mountain track; it was very narrow, branched through a gateway, and became somewhat steep. Unfortunately, it was noticed that the back tyre was flat before the climb was finished, and we rapidly set to work to change the wheel. This lost a few precious minutes, and though we were slightly ahead of time at the foot of Buttertubs we were now losing rapidly, and minutes were indeed valuable The nature of the country was such that no competitor who considered his machine, his passenger, or himself could possibly maintain the legal limit over this section. Probably fifteen minutes was lost to us through our trouble, but to our horror we soon came upon a secret check, and fears of a lost gold medal were entertained for the rest of the journey.

A Splendid Road.

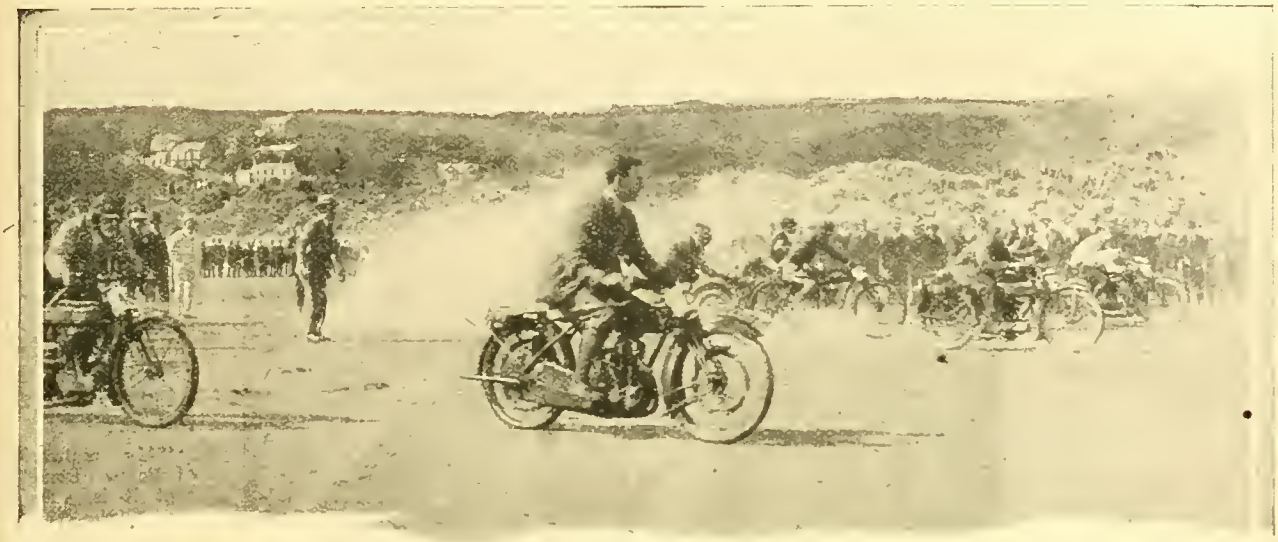


The fine broad highway (we know nothing like it in England) from Penrith to Carlisle was in as good condition as ever. It is one of the widest roads in the United Kingdom, and those responsible for its upkeep seem to take a real pride in it. After Carlisle came the longest hundred miles of the four. This may sound strange, but while the first three hundred pass pretty quickly the last hundred pass with feet of lead.

We were both fairly tired, and the dull sky and gradually increasing rain did not render the section to Moffat particularly cheering. However, it was good to stop at the little Lowland town and refresh ourselves with tea.

Then ensued that beautiful climb on one of the best graded roads in the British Isles up to the Devil's Beef Tub. The evening was now fine, clouds were rolling off the mountain tops, whose fresh green looked particularly beautiful in the evening light. Needless to say, the pass was climbed comfortably on high gear, while the wild scenery of the Devil's Beef Tub was enjoyed in full.

Then followed the descent of the other side, which was as smooth as a track, amidst scenery of great beauty.



From the top of the hill leading into Liberton a fine view of Edinburgh and its surrounding hills unveiled itself, and we then knew that our long journey was at an end. It had been a magnificent run, and was voted by everyone that took part in it as being one of the most interesting, as well as the best organised that the Motor Cycling Club has held.

Two miles of stiff climbing precedes the worst section of Buttertubs. (Left) B. Jefferys, the one-legged Norton sidecarist, coming through the gate immediately before the bad gradient. (Right) On the lower reaches of the hill, W. F. Guiver (7 Matchless sidecar)

A FIFTY MILE RACE ON PENDINE SANDS.

Welsh Speed Championships Meeting in Carmarthenshire.

FIFTY MILES AT SPEED ON THE SEASHORE.

The start of the fifty mile event for machines of unlimited capacity, and won by Ogwyn Lewis (Norton) at 55 m.p.h., a really fine performance.

EXCELLENT entries and splendid racing combined to make the Welsh speed championships a complete success. The event was organised by the Carmarthen and District M.C. and C.C.C. at Pendine Sands, on the Carmarthenshire coast, on the 16th inst. The programme attracted the leading riders in South Wales, and for the first time in the history of Welsh clubs the event included fifty mile and twenty-five mile races.

Beautiful weather prevailed, and about five to six thousand people attended the meeting, proving that motor racing is becoming a very popular sport in that part of the country.

Pendine, with its fine expanse of sand, is an ideal place for speed trials, and the course was in fine trim excepting one or two patches of soft sand, which were responsible for a few harmless spills. The arrangements made were excellent. The fifty mile Welsh championship, which was the chief event, consisted of ten laps of five miles each, and it was a very exciting race. The premier award was a valuable silver cup given by Norton Motors, Ltd., and the winner was Ogwyn Lewis (Norton), who covered the distance in 54m. 36s., and the second prize was captured by F. P. Bush (Harley-Davidson), whose time was 54m. 49s. As these two were in the novice class, they also won the first and second prizes respectively in the general class.

True Sportsmanship.

Two competitors—Mansel Davies and R. E. Toms—had a rather severe collision in this race. Dr. Lindsay, who was also a competitor, dismounted to attend to Davies, and after seeing that he was out of danger and removing him to a place of safety off the course, again mounted his machine and continued with the race. The good sportsmanship on the part of Dr. Lindsay earned high praise. Dr. Clare, of Cardigan, attended to Toms. It was ascertained that the two victims of the crash sustained slight concussion, but were soon out of danger, and are now making favourable progress.

The other events were :

25 MILE WELSH CHAMPIONSHIP FOR SOLO MACHINES UP TO 350 c.c.

EXPERT CLASS.—1, William Edwards (Verus), 32m. 19s.; 2, Lutter Davies (Coulson-B.).

GENERAL CLASS.—1, H. Church (Velocette); 2, T. J. Stephens (Velocette).

A special first and second prize for machines up to 275 c.c., included in this competition, were also won respectively by H. Church and T. J. Stephens.

2½ MILES STRAIGHT SPRINT FOR SOLO MACHINES, UNLIMITED c.c.

EXPERT CLASS.—1, Handel Davies (Brough); 2, Dr. Lindsay (Norton).

GENERAL CLASS.—1, F. P. Bush (Harley-Davidson); 2, Ogwyn Lewis (Norton).

2½ MILES STRAIGHT SPRINT FOR SOLO MACHINES UP TO 350 c.c.

EXPERT CLASS.—1, Wm. Edwards (Verus); 2, S. Horsell (Coulson-B.).

GENERAL CLASS.—1, H. Church (Velocette); 2, J. Davies (Verus).

500 MILES AT BROOKLANDS.

Race for the 200 Guinea Miller Gold Cup.

CONSIDERABLE interest will be attached to the 500 mile scratch race on July 2nd for several reasons, not the least of which is that it will be the longest motor cycle race ever held, and for one of the most valuable trophies ever presented. This is the Miller Gold Cup, value 200 guineas, presented by Capt. A. G. L. Miller, and is to be won outright.

The second and third prizes will be silver cups presented by the British Motor Cycle Racing Club. Cups will also be presented to class winners, and certificates to survivors. A team prize consisting of a certificate to the nominator, and a gold medal to each of the three team members, will also be awarded. Teams must be nominated by a member of the B.M.C.R.C., and are to consist of three competitors all driving the same make of motor cycle. A silver cup value ten guineas has been presented by Mr. Victor Horsman for the first to finish in Class A or B.

Entries (which are limited to 100) cost £2 12s., and close on Wednesday, June 22nd. Application for entry must be made to Mr. T. W. Loughborough, The Mill House, Upper Warlingham.

The race, which will have a time limit of twelve hours, will start at 7 a.m.

Every competitor must display a front number-plate of T.T. size, which will be forwarded to him after acceptance of his entry, and must wear the racing colours of his class, which will be as follows :

Class A, 250 c.c., white.
Class B, 250 c.c. to 350 c.c., blue.
Class C, 350 c.c. to 500 c.c., yellow.
Class D, 500 c.c. to 750 c.c., green.
Class E, 750 c.c. to 1,000 c.c., red.

As previously mentioned in *The Motor Cycle*, special replenishment depots may be hired by entrants.

The Worst Hill in Wales

Some Opinions of Expert Riders on the Difficulties of Screw Road—the Hill discovered by "The Motor Cycle."

THE interest of thousands of motor cyclists is aroused whenever a seemingly "impossible" hill is discovered, and trials organisers send out prospecting parties with a view to including it in their next big trial.

Screw Road, "discovered" by *The Motor Cycle*, and with which we dealt last week, no doubt will prove no exception to this rule, and we are constrained to reiterate that the hill is totally unsuitable for inclusion in a trial. We also wish again to warn individual enthusiasts that on no account should the hill be descended or an attempt made to climb it without a large party of assistants on the bad corners.

The visit of *The Motor Cycle* party, described in last week's issue, impressed every participant in the event of the dangers of the hill without properly organised assistance in the case of a machine failing and running backwards, for although the road is not on the edge of a precipice, the banks are sufficiently steep to have the same effect.

Practically Impossible for Heavy Sidecar.

The following is J. L. Norton's opinion of the hill; in it this expert driver refers to "a lot of nothing" over the edge of the road. Mr. Norton intends to revisit the hill with a sidecar having a lower gear ratio than the one used on the occasion of his visit with *The Motor Cycle* party.

"I certainly think Screw Road the most difficult hill I have ever attempted. As a matter of fact it is the *only* hill I have been up that I have not succeeded in climbing unassisted (I shall do this later), and think it practically impossible with a heavy outfit on standard gears.

"The fact that my machine reared up and attempted to stand on its hind legs, so to speak, and swung round the sidecar, opened my eyes to the danger of steep ascents where there is 'a lot of nothing' over the edge of the road on the sidecar side. I would like to emphasise this—a declivity on the same side of the road as the machine such as Bwlch-y-Groes (which, by the way, is child's play after the Screw) is, comparatively speaking, perfectly safe."

W. H. Carson, is another expert hill-climber and one who perhaps has had more experience in climbing "freak" hills than most riders. His impressions of the hill are as follows:

"My impression of Screw Road is that it is one of the most difficult hills to climb with a motor vehicle I have ever encountered.

"The gradient is severe, the corners are exceptionally bad, the surface very unfavourable, added to which is the great danger of the vehicle going over the side into the valley from which there is no protection whatever.

"On the straight sections of the hill, there should be no difficulty with any good modern motor cycle, but a great difficulty is negotiation of the corners with a sidecar, as it is most difficult to keep the front wheel on the ground. Consequently, the steering is very much affected, especially with a touring sidecar such as is used on the Excelsior, the Norton, and one or two other machines on the occasion.

"The more I encounter freak hills with varied surfaces, the more I am of opinion that there is more scope for improvement in the design of 'treads' of tyres than there is need for development in the motor cycle itself."

Lightweights Score.

Another sidecar driver who attacked the hill is G. Selby Arter of the James Co. He writes:

"Screw Hill, to my mind, is one of the worst hills in Wales; it is rendered so by the series of acute hairpins, the length, and shaly surface. The gradient, though steep, is nothing to be afraid of in itself. For lightweight solo machines it is comparatively easy if taken carefully, but for heavyweight machines and sidecars wheel-slip has to be overcome. It is a possible climb for a sidecar with the right gear and back tyre, though even then it is always doubtful whether one has the power to steer round the hairpins. It is decidedly dangerous for the man who 'konks' and runs backwards."

The B.S.A. rider, A. E. Wood, who attempted the ascent of the hill with a single-cylinder outfit says:

"Undoubtedly Screw Road is the worst I have sampled for passenger machines, owing to the loose surface, and the large reserve of power required for the numerous hairpins and a very gruelling test for single cylinder sidecars, even with very low gears.

The Worst Hill in Wales.—

"I do not think it will prove a terror for solo riders, but in any case it is certainly not to be recommended to 'windy' drivers, especially the descent of the hill."

H. Greaves, the Beardmore-Precision rider, is able to judge the hill after ten years' experience in all the big trials.

"I was particularly struck with the severity of the climb from my first inspection. I have participated in most of the principal trials organised by the A.C.U. during the last ten years, and I think I have negotiated practically every hill of any account in the British Isles. Screw Hill I regard as a very good test, as owing to the dangerous nature of the climb, one was compelled in some parts to take the worst surface, in addition to which there was the combination of the gradient and hairpin bends, each of which called for reserve power. Although I have encountered hills which have caused me more trouble, I attribute the feats we are able to do to-day to modern machines, and the knowledge gained from similar tests. I should like to say that what I was particularly impressed with, and what I consider instructive to those participating in the climb, was the way *back wheels ploughed up loose earth*. This, I think, proves beyond doubt that in many instances a rider in an 'observed' climb is penalised for what is usually termed a failure owing to 'wheel spin,' but which is really due to the road not being made of the proper substance for this particular kind of traffic, and not capable of offering sufficient resistance."

NEARING THE SUMMIT OF SCREW ROAD.

M. F. Powney (4 Triumph) approaching the last and worst hairpin on the occasion of *The Motor Cycle* party's recent visit to this new hill. He made a clean ascent.

A. G. Cocks is another well-known competition rider who made a successful climb on a Beardmore-Precision. In writing his impressions of Screw Hill, he relates how, on reaching the top of the hill, a Ford driver advised him in the local vernacular that it was impossible to go any further as "they be a big hill down there, and if ye git down ye can't get back up un," or words to that effect. Cocks answered "Wait and see!" However, when he saw the hill he hoped that the local man would not "wait and see," as, he states, he would not have laid a penny to a pound on making a clean ascent.

"But," he continues, "all these 'pimples' appear worse looking down than looking up, after helping many riders down and to push many sidecars up, two kindly spirits let me down on my Beardmore-Precision, and I freely admit it was much more pleasant riding up than going in the reverse direction. I consider this hill a great find, and *The Motor Cycle* is to be congratulated both as regards the find and the splendid organisation which made this a most enjoyable day out for those of us who were lucky enough to receive an invitation. I think any modern motor cycle should climb this hill without much trouble when it is dry; whether it would be possible to climb it when it is wet is another matter.

"For sidecars this hill is a true proposition, and from what I saw it is just a matter of luck. If you manage to keep the course you may get up, if you don't keep that course, well ——!

"I have only one suggestion to make. *The Motor Cycle* should organise more of these very enjoyable and sporting hill-climbs, from which quite a lot of useful data may be obtained, and I am sure this will be echoed by every one of the party who visited Corkscrew Hill, Llithfaen, Carnarvonshire."

Percy Newman, of the Ivy Company, was also one of the lightweight riders. He writes:

"Screw Hill, Carnarvonshire, is undoubtedly the most severe hill I have ever seen, but on consideration, I believe that I could have climbed it under any weather conditions on account of the stony nature of the road. Were it not for the five hairpin bends the hill would be no worse than the A.C.U. freak hills, as the modern machine can annihilate sheer gradient provided wheel slip can be overcome. I thought taking the hairpin bends required considerable caution, as I found the back wheel was inclined to spin, and there was a danger of going over the edge. Altogether I thoroughly enjoyed the climb, as there is always a pleasure in accomplishing a feat not hitherto performed."

M. F. Powney, the Triumph rider, who practically lives on a single-cylinder machine, and therefore knows its capabilities, does not share Mr. Norton's optimism concerning a future attempt on the hill with a single-cylinder sidecar. He thinks Screw Hill beyond the limits of a present-day single propelling a sidecar, for he considers the power reserve is not sufficient to negotiate the bends with a sidecar. This Triumph rider was one of the party which afterwards visited Alt-y-Bady, and, after the Screw Road, he was not at all impressed by the severity of the Llangollen hill.

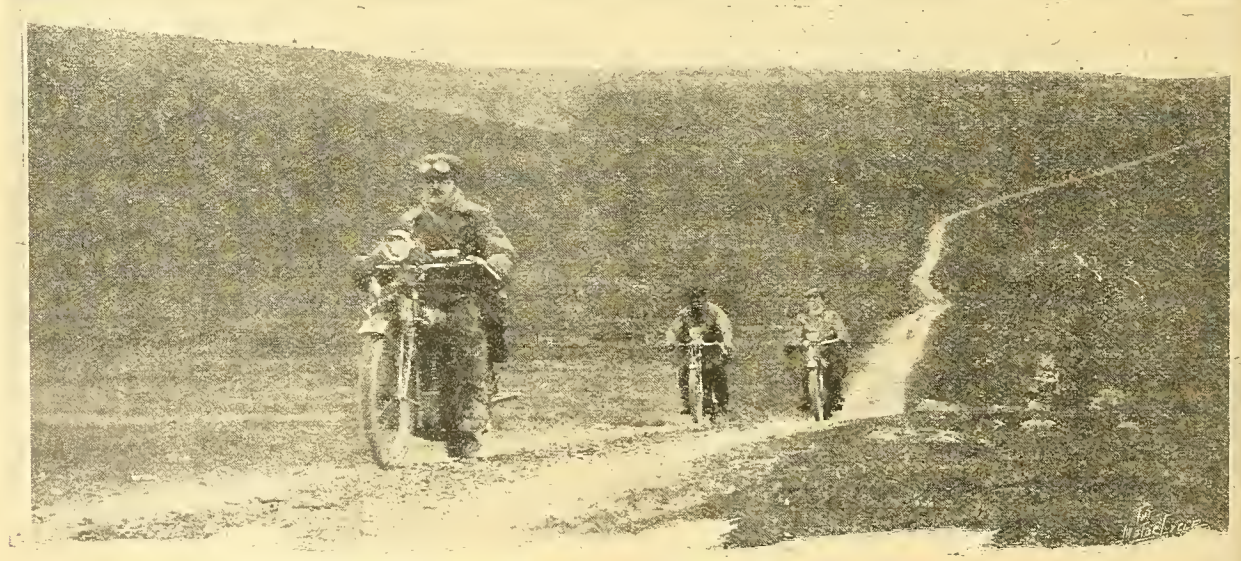
That Summer Lodge—the tit-bit of last year's A.C.U. Six Days—is a more difficult hill for a soloist to climb is the contention of W. Brandish, jun. He thinks, however, that Screw Road is the more difficult for a sidecar.

OVERSEAS SECTION

A Commentary based upon Practical Experience and a Study of Overseas Opinions.

British and American Competitions—a Contrast.

CAUSE and effect are often difficult to distinguish, and whether American machines are the product of American trials, or whether American trials have been evolved as a sequence to the type of machine popular there, is a case in point. Quite probably it is neither: for it may be that the wonderful variety of riding conditions, from natural speed tracks to literally unclimbable hills, has bred both the popular type of trial and machine. The fact remains, however, that motor cycle clubs over there have a considerably different way of organising sporting events from those in England.



In the matter of reliability trials, for example, the very name is altered to "endurance runs," and, until recently, these runs lived up to their name so well that only the hardiest riders dared compete. Recently an endeavour was made to attract the average rider, but the trade element still predominates to a great extent. Freak courses or tremendous mileages at high averages have been common in the past, and even now the schedule average set by the ruling body (the Motor Cycle and Allied Trades Association) is 22 m.p.h. as compared with the British 20 m.p.h.

Incidentally, the arrowing difficulty has been solved in a very simple manner. The M. and A.T.A. issues a standard marking sign consisting of a plain yellow triangle, the apex of which is set right or left as the turn may be, or upright for straight on. It has been found that these triangles are so inconspicuous (they are unmarked) that the average small boy does not realise that it is possible to alter them!

❁ ❁ ❁

Hill-climbs and —Hill-climbs.

BUT it is in hill-climbs that the biggest contrast lies. A road is not necessary for an American hill-climb, and the winner is the man who gets up furthest, not fastest! Certainly these provisions make the event less of a cure for insomnia for the spectators than some of our speed trials on an up-grade, called hill-climbs. At the same time it must be borne in mind that to steer a bucking "over-size" twin or 10 h.p. four-cylinder up a trackless mountain-side is naturally going to be more exciting than, say, a suitably geared lightweight on the same hill. And "big" solo mounts are, of course, in the majority in America; they are very much in the minority here. We should like very much to see a suitably geared British miniature compete at, say, Capistrano, where so few seven to twelve horse-power

OVERSEAS CONDITIONS IN A CLASSIC BRITISH TRIAL.

Part of the wild moorland traversed by London-Edinburgh competitors. Hugh Gibson (Royal Ruby), S. Eastwood (Royal Ruby) and G. E Cuffe (2½ Metro-Tyler) on the rough section north of Buttertubs

Overseas Comments.—

twins succeed in reaching the summit. At all events it would be a most interesting comparison; it might even be a revelation. In the same way it would have been most interesting to see 7-9 and 12 h.p. American mounts on the Welsh Screw Road, the ascent of which by various British machines was described last week.

Dirt track racing, which attracts huge crowds in the States, does not, of course, exist for the English motor cyclist, but other events such as fuel consumption tests, and various forms of speed guessing and speed judging runs are common to both nations. As indicated already, however, trade men and trade interests predominate in practically every motor cycle club. Indeed, although the reason is obscure, this statement holds good of clubdom anywhere Overseas. Only in the British Isles does the private owner take such a controlling and healthy interest in the sport to the direct benefit of the buyer. Clearly, the Overseas motor cyclist requires reliability, economy, and hill-climbing ability just as his *confrère* in this country, and the strenuous nature of the average British trial tends to develop the right kind of machine for India, Africa, or the Antipodes more than those which in the United States are admittedly designed as advertising "stunts."

A Selection of Letters from Readers scattered all over the World.

Strenuous Australian Trials.

MR. H. T. GRIMWADE, of Melbourne, Australia, writes enthusiastically anent the 3½ h.p. Norton. He also emphasises the severity of reliability trials in his locality:

"I am writing in high praise of a sports model Norton. I had owned previously a very well-known British single which gave only fair service, was not exceptionally fast, and had to be constantly tuned up to attain 55 m.p.h.

"Strange to say, the Norton is very little known in this city, but when one day I saw a new one in an agent's depot I promptly bought it. The result of my precipitate action has been already more than justified, as solo, with a speedometer properly tested, I can do seventy, and the engine seems to like it. There is no slowing down after a burst of a mile or two owing to overheating or valve stretch or any other cause.

"The motor cycle club here recently held two fairly strenuous reliability tests. The first was 130 miles over mountainous country with an average of 26 m.p.h., and the second was 400 miles continuous riding for twenty-four hours. In the first I rode solo, and the second with a huge sidecar and passenger weighing fifteen stone. In both I got through on time at every control. On the twenty-four hours' trial we encountered a strong head wind blowing across quite open country, and against this we had 150 miles to do. The average speed was twenty-three, which under the conditions meant a 'flat out' ride for the entire distance. The engine never faltered, we gave it plenty of Castrol G.P., and generally had a few minutes to spare.

"This year there is a 200 miles open handicap solo race and a sixty-seven miles sidecar race, for both of which I intend entering. There are generally large entries for these events, and they cause quite a sensation in Gippsland, Victoria, where they are held. So far I had done no good in either of them; my engine always dried up, but now with the Norton I am hoping to show them all a clean back wheel."

Adapting an Eight-year-old Machine to South African Requirements.

"M.A.C." has carried out in practice what so many of our overseas correspondents recommend in theory: *i.e.*, the provision of greater ground clearance, protection for the magneto, greater fuel capacity, etc. His 1913 Zenith, which we illustrate, is certainly an excellent example of skilful modernisation, and is particularly suited to our practical Transvaal correspondent's needs. He writes as follows:

"Considering you may find it interesting, I enclose a photograph of my Zenith machine, on which, when comparing with the makers' standard model, you will see that several alterations (and, to my mind, improvements) have been effected.

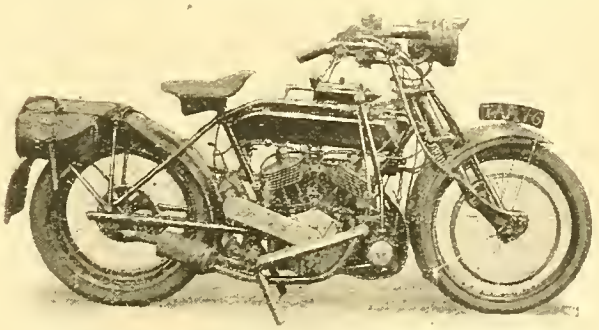
"The machine, which is, I think, a 1913 model with 90 × 77½ side by side valve twin J.A.P. engine, I bought second-hand whilst stationed at Netheravon with the R.F.C. in 1916. It was only bought with the intention of using for a few months. Circumstances, however, decided that I should bring the machine out with me on my return to this country, and since then I have effected the changes as illustrated.

"The clearance being too low to suit Colonial requirements, I made and fixed a pair of extension links between rear fork stays and seat-pillar; this required no frame alterations and gave nearly an extra inch clearauce under the engine.

"Footboards were substituted for footrests. A new torpedo-shaped tank was made and fitted to the top tube for oil, and the existing oil tank converted into an additional petrol tank. On account of there being several drifts to cross in this district, I changed the position of magneto from front to rear of motor, this necessitating a new magneto chain guard.

"A somewhat differently arranged silencer and tail pipe was fitted to exhaust pipes. The Bowden front rim brake was discarded and substituted for a dummy rim brake with a Ferodo-lined pad, operated from the right handle-bar.

"The rear belt-rim brake I also discarded and substituted with external contracting Ferodo-lined band brake operated from the left handle-bar.



"A special sidecar attachment was made for the front head lug. A countershaft clutch was made and fitted to the front of the motor, operated by hand lever on right side of machine. This clutch consists essentially of three steel Ferodo-lined discs, about 5in. in diameter (two outers fixed to the sprocket drive, and the central one to the spindle of the belt drive), with single compression spring and quick thread release gear. The whole runs on Skefko radial and thrust bearings. This clutch, which works wonderfully smoothly, has now been in use for over eight months, and apart from oiling and engine chain adjustment has required no attention whatever. The same pulley which was formerly on engine-shaft is used on the countershaft and gives gear ratios of about 4.6—8½ to 1, or according to the size of the sprocket fitted to the motor.

"A kick-starter, which was procured from an old discarded two-speed gear, was altered and fitted to work on the existing engine-shaft.

"I may mention that all the above alterations and fittings, including the chain sprockets, were made and designed by myself, and I feel that I have been amply repaid for the time spent thereon by the extra comfort, etc., obtained. As for the expense, this has been practically negligible, as with the exception of the Skefko ball bearings, Ferodo, and one or two other minor gadgets, the materials were procured from an engineering scrap yard.

"The tanks, which do not show up to advantage in the illustration, are enamelled red with black lining and lettering.

"The machine is used both solo and with a sidecar."

What can be done with even a very old machine is exemplified in this picture of a Transvaal reader's 1913 8 h.p. Zenith, modernised on an "Overseas specification." (See letter from "M.A.C.")

T.T. NOTES AND NEWS.

Items of General Interest regarding Next Month's Manx Races. A Total of 128 Entries.

A FURTHER twelve entries for the T.T. have been received by the A.C.U., bringing the total for the two races to 128. Of these twelve, two are for the Senior event, a Norton entered by A. A. Jackson, and a Sunbeam entered by the Athol Motor Garage, to be ridden by T. M. Sheard, an experienced Manx rider who has competed in several T.T. races. The additional Junior entries are as follows:

ENTRANT.	RACE.	MACHINE.
F. Aslett-Coulson Engineering Co.	L. Nicholson	2¾ Coulson-B
O'Donovan Motors	R. N. Judd	2¼ Velocette
Sun Cycle Fittings Co.	B. H. Norris	2½ Sun-Vitesse
Sun Cycle Fittings Co.	.....	2½ Sun-Vitesse
D.F. and M. Engineering Co., Ltd.	F. J. Price	2¾ Diamond
D.F. and M. Engineering Co., Ltd.	S. A. Marks	2¾ Diamond
R. Weatherall	Entrant	2½ R.W. Scout
A. J. Stevens and Co., Ltd.	Vivian Olsson	2¾ A.J.S.
Hobart Cycle Co.	W. J. Lord	2¼ Hobart
Hobart Cycle Co.	.....	2¼ Hobart

* * * * * *

The two Diamond riders this year are F. J. Price and S. A. Marks. Last year the latter rider competed on a similar mount.

* * * * * * *

J. A. Watson-Bourne, who finished 2nd on a Blackburne, was 8th, 8th, 4th, 3rd, 2nd, while J. Holroyd on a sister machine was 9th, 7th, 3rd, 4th, 3rd.

* * * * * *

The fifth man was Eric Longden on a twin-engined Dot-Jap, whose lap positions were as follows: 11th, 9th, 5th, 6th, 5th.

* * * * * *

The Junior winner's speed was 40.74 m.p.h., 39.44 m.p.h. and 39.37 m.p.h. being the speeds of the 2nd and 3rd respectively. The Senior race was won by De la Hay on a Sunbeam, at an average speed of 51.79 m.p.h., with the second man, D. M. Brown (Norton), at 51.05 m.p.h. Reg. Brown (Sunbeam) was third.

Cyril Williams's lap positions last year were 6th, 5th, 1st, 1st, 1st respectively.

* * * * * *

Of course, Cyril Williams will be a favourite for this year's Junior event. Second in 1914, first in 1920, on both occasions on an A.J.S., he should by now know both the course and his machine.

* * * * * *

Will the 250 c.c. class equal the speed of the larger (350 c.c.) entrants? Last year R. O. Clark, who on a Levis won *The Motor Cycle* Cup for the smaller class, was only 18m. behind the winner of the Junior Trophy, and but for his ten minutes' delay when his tyre came off, he would have finished second. His position for each of the five laps was: 4th, 4th, 2nd, 2nd, 4th respectively.

* * * * * *

T. M. Sheard, the Manx rider will make a third appearance in the Senior event. In 1914 he was mounted on a Rudge. This year he will ride a Sunbeam for the Athol Motor Garage.

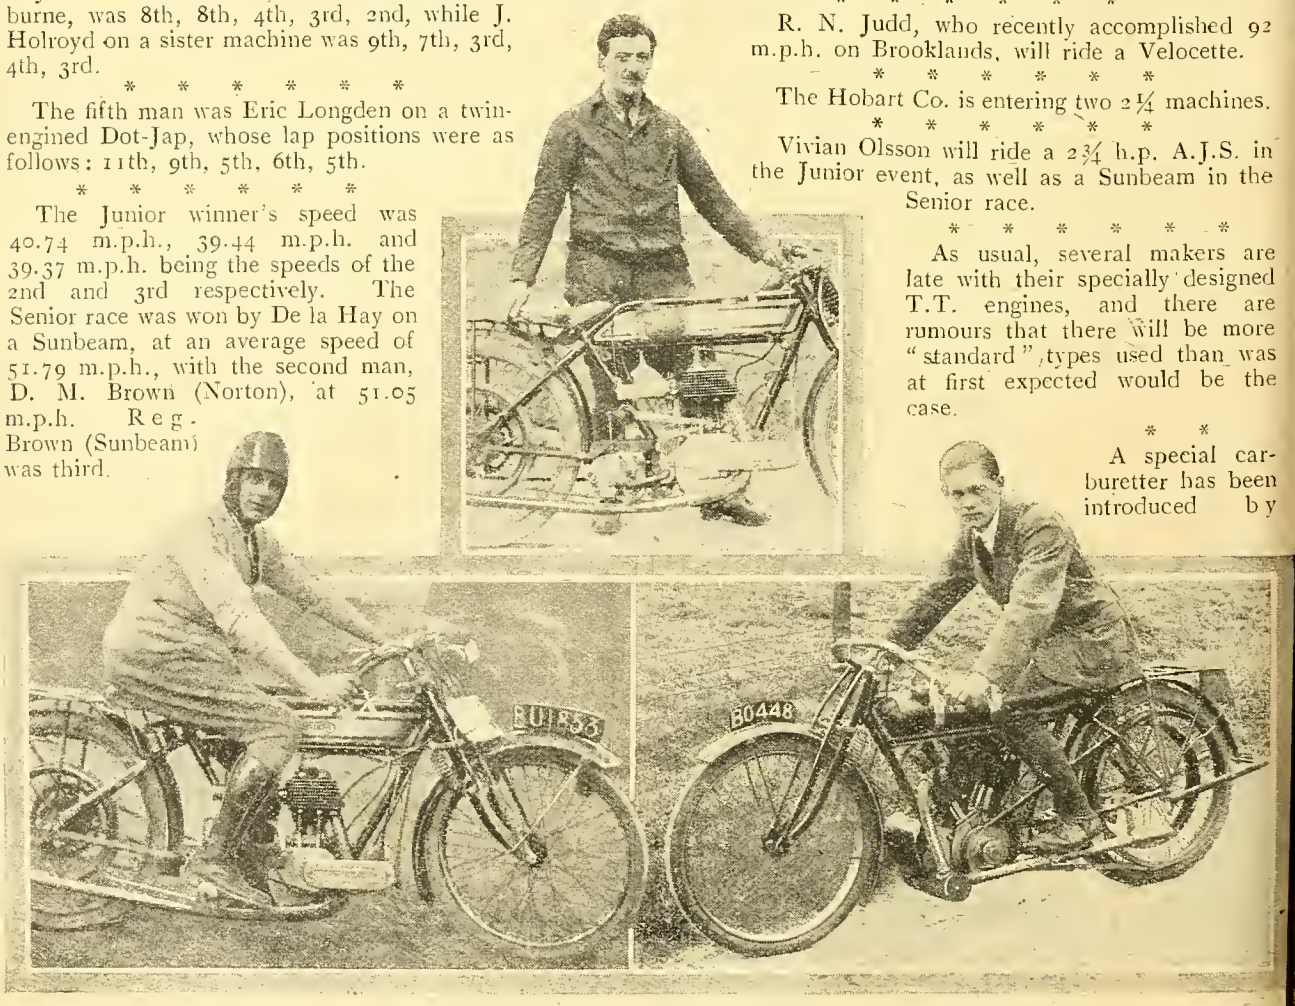
* * * * * *

R. N. Judd, who recently accomplished 92 m.p.h. on Brooklands, will ride a Velocette.

* * * * * *

The Hobart Co. is entering two 2¼ machines.

* * * * * *

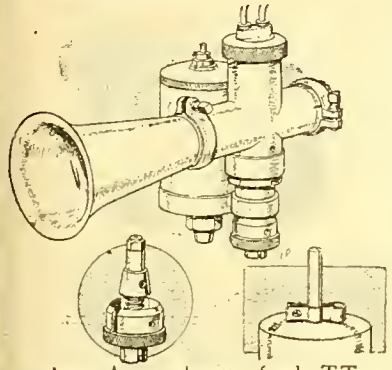


Vivian Olsson will ride a 2¾ h.p. A.J.S. in the Junior event, as well as a Sunbeam in the Senior race.

* * * * * *

As usual, several makers are late with their specially designed T.T. engines, and there are rumours that there will be more "standard" types used than was at first expected would be the case.

* *



A special carburetter has been introduced by

THREE RIDERS IN THE SENIOR RACE.

(Top) Jack Thomas, who hopes to pilot a Norton to victory. (Left) J. Mitchell, a well-known North-country rider. Mitchell's mount will also be a Norton. (Right) Cyril F. Edwards, although mounted on a Bat-Jap, has not officially named his machine.

T.T. Notes and News.—

A new Amac carburetter for the T.T. (Inset: Left: The quickly detachable jet plug. Right: The float clip secured by a split pin.

Amac, Ltd., for the Isle of Man races a feature of which is the quickly detachable jet. The main jet and body can be instantly removed by a half turn of the bayonet-pointed base plug. No centre hole is provided in the spraying cap, and every part which is liable to work loose under vibration is locked by a grub screw. This feature extends to the float chamber cap, the cap of the main throttle barrel, and the control lever cap, while the float needle clip is secured by a split pin. It is difficult to imagine any source of trouble which has not been guarded against, and we prophesy a bright future for this new instrument for touring purposes as well as for racing.

* * * * * *

The speed capabilities of 1921 machines have increased, which again raises the question: Should the Senior machines be reduced to 350 c.c., and the Junior to 250 c.c.?

* * * * * *

The Auto-Cycle Union announces that the whole of the front row in the official grandstand has now been booked for the Senior Race. The booking of seats for both races is proceeding rapidly. A few seats are available in the Royal box (from which His Excellency, the Lieut.-Governor of the Isle of Man will witness the races) at 20s. and 15s. respectively.

* *

In 1920 fastest lap was made by G. Dance (Sunbeam), 40m. 43s. = 55.62 m.p.h., which is a record.

* *

Two Hobart machines are entered in the Junior event, one of which will be ridden by W. J. Lord.

* *

New Imperials will compete in both classes of the Junior event.

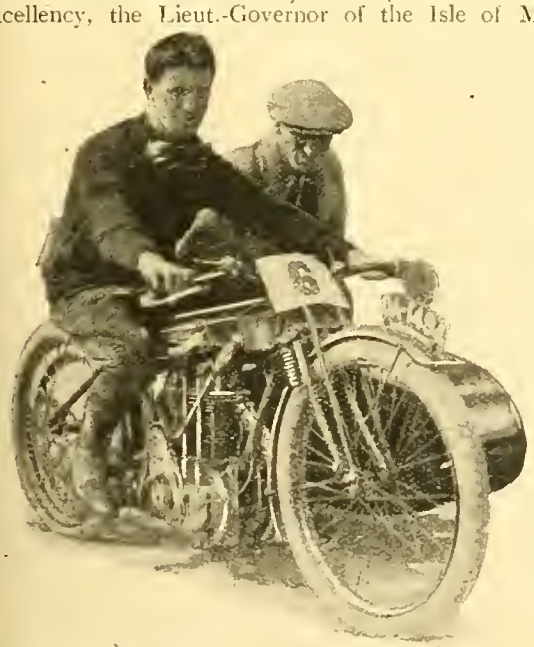
Dr. Cecil H. Hopwood, who is offering a cup for the best team performance in the 250 c.c. class. He will ride a Levis

The engines will be side-by-side valve J.A.P.'s, and three-speed New Imperial gear boxes will be used in conjunction with all chain drive and a shock absorber in the engine shaft. Very pleasing is their appearance.

* * * * * *

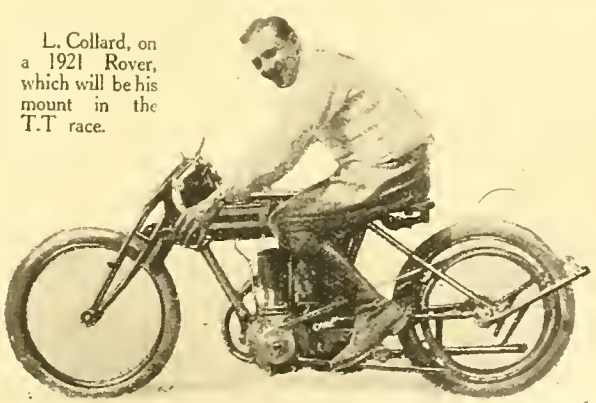
Probably one of the lightest machines in the Junior event will be the Climax-engined New Comet. The T.T. model is practically a standard model, and in order to bring it up to the F.I.C.M. weight minimum it will have to carry "ballast" to the extent of 11 lb. This appears to be quite absurd, as the light weight is not due to any cheese-paring, but is the weight of the standard model.

* * * * * *



Yellow and black are to be the racing colours of L. N. Vicary and G. N. Norris, who will ride Ivy machines entered by Maude's Motor Mart.

* * * * * *



Altogether there are nine Ivy lightweights in the races, one of which will compete in the Senior event.

* * * * * *

Many tipsters for the races this year are basing their calculations not on engine efficiency but on the steering qualities of the machines, and on the riding qualities of the men.

G. Dance, of Sunbeam fame, on the 3½ h.p. overhead valve machine, which he has used successfully in speed trials and hill-climbs this year. A side-by-side valve type of engine will however, be used by him in the T.T. race

L. Collard, on a 1921 Rover, which will be his mount in the T.T race.

LETTERS TO THE EDITOR

The Editor does not hold himself responsible for the opinions of his correspondents.

All letters must be addressed to the Editor, "The Motor Cycle," Hertford Street, Coventry, and must be accompanied by the writer's name and address.

AN ECCENTRIC MAGNETO.

Sir,—I have had the same trouble, and have also come across two other cases—one on a lorry. As your correspondent "T.D.C." remarks, there is no spark under compression, although a good one out of the cylinder.

I think the trouble is caused, first, by an internal short, and afterwards by the current taking the line of least resistance, *i.e.*, through the driving sprocket. I found that such was the case with my own magneto, and also in the case of the lorry. I might add my magneto was "shorted" through the lead from the high-tension coil breaking. The instrument on the lorry was "drowned out." In both cases the engines went perfectly with a British magneto.

A. B. HUNT.

Sir,—May I offer a most possible solution to this problem?

I had just the same trouble with an American magneto, and it took me the best part of two days to diagnose. Like your correspondent I could get a $\frac{3}{16}$in. spark easily, but never a shot out of the "'bus" until I tried the timing so far advanced that it would fire every charge backwards. This put me on the track that a spark would not fire gas under compression. I then dismantled the magneto, which is of the still coil variety (no windings on armature). When advancing or retarding, the armature tunnel, or pole pieces, go forward or backward, thereby keeping the same relative position to the contact breaker all the time, the idea being to maintain a maximum spark at all settings of the magneto (incidentally if it is set wrong in the first place, it is wrong in every setting, *i.e.*, advanced or retarded). If your correspondent will take out the four screws which fix the contact breaker to armature tunnel, and try it about "half a hole round" first in one way and then in the other, he will find enough "juice" there to fire half a dozen Rolls-Royces. The reason is that either the points open too soon before the condenser is filled, or too late, when it will have partially discharged.

ELECT. ART. R.N.

Droitwich.

MAXIMUM SPEED OF THE ALL-CHAIN TRIUMPH.

Sir,—I was pleased to read the account in your issue of May 5th of nine months' experiences with an all-chain Triumph. I have always been a Triumph rider, and have ridden one of each year's productions excepting the war models, and now possess an all-chain model, on which I have covered about 1,500 miles.

I can fully endorse all that the writer says of the Triumph.

Regarding his reference to "normal speed limit," I must object to this. I have never ridden a 4 h.p. Triumph which would not touch the 50 m.p.h., and should like to say that my 1919 machine would reach the speed of 60 m.p.h. I think any Triumph rider will agree with me that the 4 h.p. Triumph which will not do 50 m.p.h. has been badly treated.

About attention. I rode one 4 h.p. Triumph for 18,000 miles, competing in occasional trials, and all the attention that was given the engine was decarbonising about ten or twelve times and the fitting of a new set of piston rings. I should like to find a machine that (apart from cleaning) needs less attention.

With the usual disclaimer.

R. CLIFFORD ATCHERLEY.

[The writer of the article mentioned reaffirms his statement *re* normal maximum speed, but adds that he could pass many machines said to be capable of 50 m.p.h.—ED.]

MUDGUARDING ON LIGHTWEIGHTS.

Sir,—Referring to the mud question, "Ugh," in your issue of May 5th, says it is difficult to find a lightweight two-stroke that is equipped with adequate protection from mud. Whilst agreeing that mudguarding is not given the consideration from manufacturers that it should have, I would like to mention that two lightweights are marketed with really good mudguards. They are the Cedos two-stroke and the New Imperial-Jap four-stroke. The mudguarding on these two machines is not all one could wish for, but of the host of lightweights now offered they are undoubtedly the best in this respect. Business men who must keep clean will find that the New Imperial is much nearer the "ideal" than most other lightweights. Manufacturers of lightweights would do well to make a point of fitting wider and longer mudguards instead of fitting plated exhaust pipes and beautifully coloured transfers.

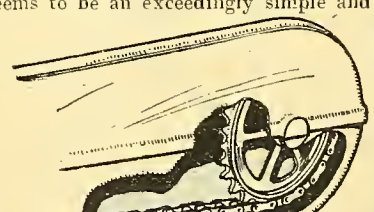
CHARLES STAGG.

CAMPING AND THE LAW.

Sir,—I note that Mr. Herbert Richardson, in the issue of *The Motor Cycle* dated 12th May, attempts to dispel doubt from the mind of a previous correspondent, Mr. J. Jameson, "as to the correct law regarding camping."

May I, with all due respect, suggest that, instead of referring to "a member of a well-known firm of tent "manufacturers in Holborn," he refers to Section 72 of the Highway Act, 1835, which enacts that:

> "If a hawker, higgler, gipsy, or other person travelling, shall pitch any tent, booth, stall, or stand, or encamp upon any part of the highway . . . . every person so offending . . . . shall . . . . forfeit and pay any sum not exceeding 40s. over and above the damage occasioned thereby."



Birkenhead.

AB ORIGINE.

[We have received several letters in the same strain as the above; and we would also point out that this matter was made clear in an Editorial footnote to Mr. Jameson's original letter.—ED.]

CHAIN LUBRICATION.

Sir,—I have invented a device for chain lubrication which seems to be an exceedingly simple and cheap article, and I thought it might interest you and others if you care to publish a sketch of the device, when I shall be glad to have the opinions of your readers as to its utility.

Mr. H. T. Haselgrove's suggestion for keeping the chain well lubricated. (See letter on this page.)

The advantages, in my opinion, are: Efficient oiling, cheap construction, wear and tear practically *nil*, and continual circulation of oil.

The brush may be fixed on a central pivot or otherwise made on a floating drum.

H. T. HASELGROVE.

TEMPORARY ENGINE SEIZURE.

Sir,—As the owner of a well-known 4¼ h.p. sidecar outfit, I send you the following experience which happened to me last year. Twice on the same stretch of road at approximately the same place, when doing about 35 or 40 m.p.h. for about one and a half miles, the back wheel suddenly locked—once riding solo, and again with the sidecar attached. When doing about 20 or 25 m.p.h. it ran perfectly. On examining the machine, I failed to find any fault. As it was near holiday time, I gave it a thorough inspection, when I found that the exhaust valve had only half the usual lift, this being due to a worn rocker. Not having time to wait for a new rocker, I took the old one to a local blacksmith and had it drawn out so as to give the valve a lift of ¼in. Since then I have done about 1,500 miles without any sign of the trouble recurring. NOVICE.

Durham.

Sir,—Referring further to the question of mysterious seizures, an experience of my own may be of interest to many who have suffered from this complaint.

I possess a machine which I use as a hack mount, and ride every day to and from business. While on the usual journey my engine stopped in about four yards with all the symptoms of piston seizure. This surprised me, as I am always inclined to err on the side of over oiling, and at this particular moment I had only just delivered a pumpful of oil to the engine.

I dismounted and wheeled the machine backward and forward a few inches to investigate the trouble, but much to my surprise I discovered that everything was quite free, and I finished the remaining five miles of my journey without mishap.

However, to satisfy myself that the "innards" of the engine were behaving as they should I removed the cylinder and looked for signs that would indicate a tight piston or bearing, but everything was O.K. I reassembled and rode for about four weeks, covering 700 odd miles, when the same mysterious seizure occurred, and was just as easily cured. This time, however, on removing the cylinder I found the bore slightly scored, but strangely enough not on either of the pressure sides; the piston was not marked, but the rings were just a little. On removing the rings, which are of the eccentric type, I found that a carbon deposit had formed conforming to the eccentric gap at the back of the ring, and that seizure was due to one of the rings working round in its groove, and so wedging between the cylinder wall and the high spot on the carbon deposit. Wheeling the machine backward and forward must have worked the ring back to its original position in the groove and so freed the piston, thus accounting for the momentary nature of the seizure.

This wedging action could occur with rings of the concentric type which had become even a few thousandths eccentric due to wear, if the clearance at the back of the ring was sufficiently reduced by carbon deposit. N.S.F.

London, S.W.19.

Sir,—I have been very interested in the various theories put forward with regard to temporary engine seizures. My explanation is as follows, and may interest your readers who have suggested various reasons.

The seizure is due to expansion of the piston head when sufficient clearance has not been allowed *above* the top ring. The short interval between the time of seizure and the examination allows the piston head to contract, thus automatically becoming free.

When I was in charge of the largest motor cycle repair shop in France in 1916 I had occasion to test a new W.D. single, and, while doing about 45 m.p.h. after climbing our best hill, the engine suddenly seized and locked the back wheel. I skidded for fifty-nine yards before coming to rest, and, putting the machine on the stand, tried the kick-starter. *The engine was perfectly free* and I made sure nothing else was the cause.

I was naturally keen to find out the cause, and, suspecting a tight piston, I had the cylinder and piston removed on my return to the depot.

Deep scores above the top ring showed that insufficient clearance had been allowed to counteract expansion of the piston head, and, on measuring the piston with a micrometer, I found that the piston was the same diameter for its whole length. I measured twelve new pistons in my spare part stores to find the same result. By skimming about .008in. off the diameter above the top ring no further trouble was experienced.

I have never known a plain bearing seizure to become free without a good deal of coaxing or forcing, and, as the designer of the original Blackburne, I can claim to have had a great deal of experience of plain bearings.

E. A. BURNEY.

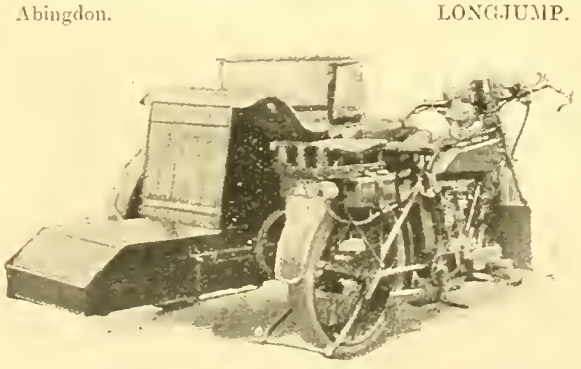
ELECTRICAL PHENOMENON.

Sir,—Your correspondent, Mr. F. C. Schofield, appears to take things too much for granted when he states the cause of my trouble as a partial earth due to faulty "flexible" insulation. Perhaps it would interest Mr. Schofield to know that the length of "flexible" in question was tested with an Evershed Magger testing set for insulation resistance, the whole of the wire, except the two ends, being immersed in a bowl of water. The reading on the scale was 25 megohms. This should, I think, convince any electrical man that the insulation resistance was all right. I have since tried other lengths of new flexible in the same manner, and with the same results.

Possibly Mr. Schofield overlooked the fact that I stated in my letter that the insulation of the "flexible" was sound. By sound, I meant that it was tested in the manner described. (I may state the "flexible" I used was best quality rubber-covered, not electric light or power cable.) Therefore, I adhere to my original solution of the trouble, and still regard this phenomenon as a pure case of electro-magnetic induction.

N. W. BENLEY.

A LONG JUMP!



Sir,—I should like to draw the attention of motor cyclists to the danger of small country bridges over streams, etc.

The other day I and a friend were riding a 4 h.p. Blackburne, myself riding pillion. We were travelling along a country road, more or less straight and level. In the distance, *i.e.*, about 250 yards away, we could see a bridge over a stream, which looked as if it had a gentle approach. But when about twenty yards away we saw, to our horror (we were going rather fast), that it was really a very sharp ascent.

It was impossible to slow down, and the obvious thing happened—we shot up a frightfully steep incline and jumped, landing with a terrific crash which sent the Brampton forks into the lamp. After a few wobbles we came to a standstill by the side of the road, with no casualties. We walked back and measured the jump by the marks on the road. It was exactly twenty-seven feet.

The bridge came almost to a point on the top, and a car would probably have scraped its gear box going over.

Abingdon. LONGJUMP.

LUGGAGE CARRYING EXTRAORDINARY.

Mr. J. G. Poole, the owner of this Rudge-Multwin outfit, evidently desires to carry considerably more luggage than the average grid can accommodate. To this end he has constructed a box, as shown, which may be easily and quickly detached, and which has an "inside" carrying capacity of a full-sized suit case and other articles, while there is room on top for at least three spare tins of petrol.

ON THE ROAD WITH THE ENFIELD SIDECAR.

Sir,—I have read with interest the account in a recent issue describing a run on one of the new Enfield sidecar outfits.

As a user of a 1919 Enfield outfit, I can confirm what you mention—the tendency of the machine to run bumpily on bad roads, as far as the bicycle portion of the outfit was concerned. I cannot speak as to the sidecar, never having ridden in my own sidecar for more than a few hundred yards, though my passengers speak well of it.

I have since transformed the running of the machine, from the driver's point of view, by fitting a device similar to that indicated in the article referred to above. This is the patented saddle suspension marketed by the makers of the L.M.C. machine. I saw the advertisement of this in your paper, and also examined a specimen at the last Show, and finally bought one and fitted it. The Enfield not having the usual gear box, there is much less clearance between the seat tube and rear mudguard than in most machines, so that I had to do a little adjusting to get it in position. I found the easiest way was to take advantage of the Enfield divided rear mudguard, dropping the rearmost portion about half an inch and cutting away the head of one of the bolts which fasten the guard to the supporting pieces.

This allows clearance enough for the spring column of the L.M.C. device, which comes behind the actual seat tube. I find that it renders the machine as comfortable again to ride, it being possible to take roads at normal speed which were previously almost unrideable. Passengers in the sidecar have more than once commented upon the way in which they can see the bicycle jumping about violently on bad stretches, while the saddle, with myself on it, remains steady.

BERNARD J. PALMER.

AVERAGING THIRTY

Sir,—Your correspondent "Eclipsed" in your issue of the 28th ult. is labouring under several delusions. He says that in order to average 30 m.p.h. on the road a 60-70 m.p.h. spurt is often necessary. I should like to know, then, what speeds are *attained in spurts during the T.T. races to put up an average of 52 m.p.h.*, also whether "Eclipsed" is aware of the Brooklands lap speeds of machines which entered in previous years' T.T. races, the machines being in their T.T. trim and tune? I would suggest that he referred to the speed (average) put up by the Blackburne which finished second in last year's Junior T.T., and consider that the approximate maximum of this machine was 47 m.p.h. He states that most Douglas machines that he knows (presumably $2\frac{3}{4}$ h.p.) have a maximum of 55 m.p.h. Now there is not one standard $3\frac{1}{2}$ h.p. (let alone a $2\frac{3}{4}$ h.p.) in twenty that could touch 55 m.p.h. under normal conditions, or even favourable conditions, on the road to-day. Those who possess $2\frac{3}{4}$ h.p. Douglases which are capable of touching that speed in standard trim would be well advised to tune and race at Brooklands.

The average speeds of motor cycles and touring cars cannot fairly be compared at present, owing to the patches of bad road surface, which are impossible to negotiate at speed on a motor cycle, but which do not materially affect the car. The average motor cyclist with a mount of $2\frac{3}{4}$ h.p. (by this I do not mean 295 c.c. or so, but 350 c.c. and above) finds that very few cars can pass him and remain in front when he is in a hurry.

The average speed of most mounts, on the same average throttle opening, would be considerably increased by closer gear ratios. It is very annoying, and, moreover, a waste of time, to drop from 5 to 1 to $8\frac{1}{2}$ to 1 for an incline which is just too much for top gear. Manufacturers, on their solo mounts, could with advantage make a close ratio gear box optional.

From these remarks it may be thought that I agree to the possibility of doing 150 miles at an average of 28.3 m.p.h., two up, on a $2\frac{3}{4}$ h.p. Douglas (which statement "Eclipsed" criticises). Far from it.

L. W. E. HARTLEY.

Sir,—May I use again the valuable space of your columns to reply to "Eclipsed" about the speed of my Douglas.

I very much regret "Eclipsed" is not in Belgium, or myself in England, so that I could show him the machine at work.

The machine, first, is really $2\frac{3}{4}$ h.p. (although a friend of mine calls it "Two horses and one zebra"); and is a standard 1914 two-speed with k.s. and cone clutch. I bought it second-hand in February, 1920, and never had any trouble. The only changes I made were that I fitted another handlebar, wide and flat, a No. 5 cam and a Binks three-jet carburetter (and two $26\times2\frac{1}{2}\times2\frac{1}{4}$in. Palmer covers). The high gear ratio is $5\frac{1}{2}$ to 1. As an example of the speed of the machine, several times I made the journey from Brussels to Dinant and back (118 miles) in between 4h. 5m. and 4h. 12m., with my wife on the carrier. (I must tell you we are not heavyweights; my wife is about 110 lb. and myself 145 lb.) Riding solo, I made two single journeys, once in 1h. 40m. and once in 1h. 48m., for the 59.35 miles, but these rides were rather a T.T. The two journeys were accomplished with a favourable wind.

I understand "Eclipsed" is astonished by this, but he is not the first. In friendly "dust-ups" owners of big machines have been shown a clean pair of heels by the old "Duggie," and, except for the Norton, there are few mounts on the road that the machine fears.

JEAN C. WATELET.

Brussels.

LIGHTS ON STATIONARY VEHICLES.

Sir,—Endorsing "Ex-Cavalry D.R.'s" views in a recent issue, I may say that a few evenings ago I had a similar hair-raising experience. A car came round a bend and pulled up on its off side of the road, and I, being dazzled, attempted to pass on my near side, with the result that, saved by my own dazzle head light, I saw my mistake just in time to swerve and avert an accident.

I am sure that the practice of leaving vehicles with strong lights in the wrong direction is simply due to want of thought and not to bad manners, on the part of the drivers—I must confess I have myself been guilty of a similar offence, before my fright.

Therefore this little point in "road manners" requires publicity, so that others may not have to learn wisdom by bitter experience.

HALF WATT.

Great Sutton.

MOUNTS SUITABLE FOR DISABLED RIDERS.

Sir,—Referring to the letter of Mr. E. J. L. Strong, in the issue for April 28th, there must be many disabled men who would be glad of all possible information as to suitable types of machines and necessary alterations, etc. For myself, I used to ride a $3\frac{1}{2}$ h.p. single, solo, before the war (in which I lost my right leg, about 7in. below the thigh). Now I am looking forward to getting a sidecar outfit, but am somewhat deterred by lack of knowledge of the possibility or otherwise of wearing an artificial leg while sitting on the ordinary type of saddle and astride the modern wide tank. I am inclined to think that the shape of the ordinary saddle, coupled with the vibration and bouncing of the footboards, would tend to force the artificial leg off.

Is there anything in the nature of a well-padded and sprung bucket seat having a straight front suitable for fitting to an 8 h.p. outfit?

The Enfield outfit has rather appealed to me, partly on account of its simplicity, but it has a right-hand side brake pedal. Could this be converted to left side?

London, E.17. 1914-1919.

[It would be a somewhat difficult, but not impossible, task to convert the Enfield brake pedal to the opposite side of the machine.—ED.]

An Announcement.

THE MOTOR CYCLE

T.T. AND SUMMER NUMBER

WILL BE PUBLISHED ON

THURSDAY, JUNE 16th.

Special articles and illustrations of world-wide interest to every motor cyclist, whether soloist, sidecarist, tourist, competition rider or racer, are in preparation.

On sale on the day of the Senior T.T. Race, it will form a comprehensive guide to the blue riband of the motor cycle world, including the latest news from the course, details of the competing machines and practice lap times.

THURSDAY, JUNE 16th. *4d.*

QUESTIONS AND REPLIES

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 2d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects. ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

FITTING A SPEED GEAR.

[?] Having a 3¾ h.p. Elswick with Precision engine (single gear, with clutch), I am desirous of fitting a sidecar. As the machine is not powerful enough to take a sidecar with a single gear, what kind of variable gear would you advise me to fit?—J.U.

The simplest arrangement, and one which does not involve any structural alterations in the machine, is the Bradbury two-speed epicyclic engine-shaft gear. Of course, if you care to go to the expense, it would be much better to have a three-speed countershaft gear box with kick-starter, but the fitting of these, however, necessitates the rebuilding of the back part of the machine.

DYNAMO LIGHTING

[?] On a cycle car I use accumulators to light two side lamps and the tail light. I use four 4 volt ex W.D. accumulators. I am told that the correct charging rate for these accumulators is 2 amps. Each accumulator is of 12 amp. hours capacity. My four are in parallel, and, therefore, equal to a large 4 volt accumulator of about forty-eight hours capacity. I am thinking of fitting a 4 volt dynamo, and I see that this charges at from 2 to 5 amps., according to speed. (1.) Is 5 amps. too high a charge rate for my four accumulators in parallel? (2.) Where should the ammeter be put between the dynamo and the accumulators—on the + line or the —? (3.) My accumulators at present drop to 3.5 volts with all lights on. Is this normal? (4.) Is it harmful for the dynamo to be run with switch open so that there is no circuit for the current generated?—A.C.P.

) 5 amps. will be about correct for e batteries in parallel as arranged. (2.) e ammeter may be put either on + — side. (3.) The accumulators, when ly charged and lamps not on should ow 4.2 volts, and even when lights are they should not fall below 4 volts ke sure that the voltmeter wires are nected directly to the battery terminals l not to the lights, as there may easily half a volt drop in the lighting wires mselves. If it is confirmed that the ts drop to 3.5 at the battery itself, you either overloading the battery or not rging enough. (4.) The dynamo can ely be run with the switch open; but, a matter of fact, it will probably be essary to charge whenever possible.

CONTRADICTORY.

[?] May I ask your assistance in solving what appears to me a mystery? I have a Hazlewood outfit with a 5-6 h.p. J.A.P. engine and Amac carburetter. This machine runs very well until it comes to a hill, when it only goes halfway up and then pulls up dead. I have never had any trouble before, and nothing is changed.—N.T.

If, as you say, the machine is unchanged, and yet will not now climb hills as it did formerly, it is difficult to attempt an explanation. Obviously, some obscure change has taken place, and we think that if you go over all points carefully you will find the cause of the trouble. Examine particularly the petrol supply system, dismantle the carburetter, and clean the jet, also make quite sure that there are no air leaks at the induction pipe joints or at the inlet valve stems. A choked filter might also cause the trouble.

SILENCE AND SILENCERS.

[?] My machine is a 6 h.p. sports model Zenith, to which I have fitted a long copper exhaust pipe (1⅞in. inside diameter). The local police appear to view it with suspicion, and bring out various notebooks, etc., when I pass. Does an exhaust pipe pass as an expansion chamber if it is a certain length?—L.O.M.

Provided the machine is reasonably silent, we do not think that you need anticipate any interference on the part of the police; but if it creates an excessive noise, you may, of course, find yourself in difficulties; in any case, it would have been much wiser to have retained the makers' standard silencer. There is no special ruling concerning the length of exhaust pipes, etc. The legal requirement is that the exhaust gases must be reasonably silenced by being passed through suitable apparatus.

THREE, TWO, ONE—GO!

At the start of the recent Surbiton and District M.C.C. hill-climb. F. W. Barnes, of Zenith fame, will be observed with the flag starting H. B. Uhde (2¾ Douglas).

A STARTING DIFFICULTY IN THE TROPICS.

I have recently bought a 1920 model Scott, and am experiencing most unusual difficulty, or rather I should say treachery, in starting when the engine is hot. I have carefully gone over all such points as magneto being out of order, wrong timing, oil on plugs, unsuitable plugs, dirt in jet, etc. All these details I have eliminated, and find that everything is in order. The carburetter is an Amac with No. 27 single jet, which I think too large, as the machine will take all the extra air with the throttle just open. The average mean temperature out here (Singapore) is about 82° Fahr. The machine starts from cold easily at 8 a.m., with two or three pushes of the starting pedal, carburetter a little flooded, no air, and throttle half open. At noon, when the temperature has risen, with the same setting one push is sufficient; this is always reliable. But when I wish to start it after the engine is warm matters are very different, but I cannot think of a reason.—O.B.P.

The trouble is undoubtedly due to over-rich mixture when the engine is hot, and we should advise you to lower the petrol level as far as possible either by fitting a light washer between the top of the float and the split-pin on the float needle, or by lowering the collar on the latter. Also turn off the petrol when the machine is standing, and do not turn it on again until the engine has been restarted. If this does not effect a cure, probably the fitting of an extra air valve or tap in the induction pipe would help you. It should not be necessary to use a smaller jet than No. 27, although in your climate a variable jet adapter might be of considerable value, as it would enable you to start with a small jet opening, which could be enlarged after the engine started.

CHIEFLY RELATING TO MAGNETOS.

Having purchased a 2¾ h.p. Douglas motor cycle, the engine of which badly requires overhauling, I should be grateful if you would assist by enlightening me on the following: (1.) The machine has automatic inlet valves, with two-speed gear directly below the flywheel of the engine. The magneto fits in a recess in the tank; the lubrication of the engine is by hand pump, which is let into the front part of the tank. It has no two-way tap, but is operated by turning the plunger to the left for the tank and right for the engine. A glass petrol gauge is fitted on the right side of the tank. The engine has plain bearings. What is the year of manufacture of this machine? (2.) I notice that the timing side of the crankshaft is hollow, and has a thread right down the interior. What is this thread for? (3.) I wish to arrange, if possible, for the Bosch high-tension magneto on this machine to supply the spark for the engine and also illuminate the front and rear lamps. What voltage and ampèrage is the low-tension circuit likely to give when run at normal speed? (4.) Do you consider the current sufficient to illuminate both lamps? (5.) If I run both lamps direct from the magneto without incorporating a choking coil, am I likely to injure the low-tension windings in any way? (6.) I understand that a short circuit is injurious to any sort of electrical generator. If such is the case, why is it that when the platinum points of a magneto touch no harm results to the low-tension circuit? (7.) Does the condenser of the magneto come into action when the platinum points are open or closed? (8.) Why is there a fibre bearing in the rocker arm of the magneto? I presume that it cannot be intended for insulating purposes, as I see that the arm has a connection to earth *via* the spring.—W.W.

(1.) The machine is apparently a 1911 model. (2.) The makers would best answer this question. (3.) We cannot give you the figures you require, as they vary considerably with different types of magnetos. The voltage will probably be about 6. (4.) A reasonable light might be obtained, but it would fluctuate considerably with variations of engine speed. (5.) It is impossible to run both lamps from the magneto; you must use a choking coil. (6.) The low-tension windings are short-circuited when the magnetic flux in the armature is at a minimum. You should study the subject in such a handbook as "Magnetos," obtainable from our publishers. (7.) The condenser comes into action when the platinum points open. (8.) This material is used because it requires no lubrication.

Important Dates.

Sat., May 28th—East Midland Centre A.C.U. Open Hill Climb.

Tues., June 14th—Junior T.T. Race.

Thurs. June 16th—Senior T.T. Race.

Sat., June 18th—North-Western Centre A.C.U. Open Speed Trials.

Sat., June 25th—M.C.C. Inter-team Trial for "The Motor Cycle" Cup

Fri., July 1st, and Sat., July 2nd—Arbuthnot Trophy Trial.

Sat., July 2nd—Bournemouth M.C.C. Open Reliability Trial.

Sat., July 2nd—500 Mile Race at Brooklands for the Miller Gold Cup.

Thurs., July 7th—Essex County and Southend A.C. and Essex M.C. Joint Open Speed Trials.

Sat., July 9th—St. Andrews Speed Trials

Sat., July 9th—Cardiff M.C.C. and associated clubs Open Hill Climb.

Mon., July 11th, to Sat., July 16th—Scottish Six Days' Trial.

Sat., July 16th—Ilkley M.C. and L.C.C. Open Reliability Trial.

Sat., July 23rd—East Midland Centre A.C.U. Open Speed Trials.

Sun., July 24th—Motor Cycle Grand Prix Race in France.

Sat., July 30th—Newcastle and District M.C. Open Speed Trials.

Mon., Aug. 1st, to Sat., Aug. 6th—International Six Days Trial in Switzerland.

Sat., Aug. 6th—North Wales M.C.C. Open Reliability Trial.

Mon., Aug. 29th, to Sat., Sept 3rd—A.C.U. Six Days Trial.

Sat., Sept. 17th—Grand Prix Race for Cycle Cars.

EXPERIENCES WANTED.

"F.B." (Woodley).—Bowden extra air inlet on 4 h.p. Triumph with sidecar; effect on speed and consumption.

SPARKLETS

Tyre Price Reductions.

A further reduction in the price of its motor cycle covers and tubes, as from May 19th, is being made by the Goodyear Tyre and Rubber Co. (Great Britain), Ltd., of 152, Shaftesbury Avenue, London, W.C.2.

For Camping Tourists.

"Camp Touring and Lightweight Camping," by "Rovator" (the Athenæum Literature Department, 10, Adelphi Terrace, London, W.C.2, price 1s. 6d.), is a well-illustrated booklet dealing with the question of camping, a subject which appeals to many motor cyclists. Particulars are given of the principal lightweight tents and of the various accessories used in connection with camping.

Tyres on Track and in Trials.

The Levis machine on which G. Davison won the Levis Cup awarded in this year's Colmore Cup Trial was fitted with Hutchinson tyres; the same make was fitted also to the wheels of J. V. Prestwich's Diamond-Jap on the occasion of his breaking the five miles 250 c.c. class records at Brooklands recently.

In a heavier class, the Harley-Davidson, on which D. H. Davidson won the 1,000 c.c. solo three-lap scratch race, and at the same time created a new world's record for the flying five miles at Brooklands, was fitted with Kempshall tyres.

Rom tyres were fitted to the 3½ h.p. Ariel on which F. A. Longman won the Jarrott Cup in the 1921 London-Land's End trial, and also to the 4 h.p. Triumph machine on which T. S. Sharratt won the Jarrott Cup in the same trial last year.

Catalogues Received.

H. Taylor and Co., Ltd., 21a, Store Street, Tottenham Court Road, London, W.C.1: Describing almost all the principal motor cycle accessories, Taylor's new catalogue is worthy of a place on every rider's bookshelf. An innovation, convenient in these days of price fluctuation, is the loose leaf binding which has been adopted in order to facilitate the insertion of new or revised sheets. One shilling is charged on the catalogue, but attached to the first page is a voucher of the same value which may be used when submitting an order for any goods listed.

Villiers Engineering Co., Ltd., Blakenhall, Wolverhampton: A booklet describing the Mark IV. Villiers two-stroke engine, which is fitted with flywheel magneto. Concerning the latter there is some interesting reading matter illustrated with clear drawings. The booklet also contains hints and tips with regard to the engine, and an illustrated list of spare parts, which are numbered and priced.

LONDON-EDINBURGH RESULTS.

ANALYSIS OF OFFICIAL RESULTS. COMPLETE LIST OF MOTOR CYCLE AND CYCLE CAR COMPETITORS AND AWARDS.

203 Motor Cycles, Sidecars, and Three-wheelers Started. 169 Finished. 103 Gold Medals, 30 Silver, 13 Bronze, 22 Disqualified, 1 Held Over.

AN analysis of the results of any important trial is always of interest, and the results of the 1921 London-Edinburgh Trial are no exception. As regards gold medal winners, it is interesting to note that of the motor cycle classes the three-wheeled cycle cars show the best figures, for 75% of the survivors obtained the highest awards. Solo machines come next with 70%, and sidecar machines last with 45%. A further search, however, reveals the fact that of the starters 88% of solo mounts finished, 84% of the three-wheelers finished, and 76% of the sidecar machines. As usual, therefore, the solo machine heads the list for the greatest percentage of survivors.

OPEN HILL-CLIMB IN IRELAND.

DESPITE prevailing conditions and restrictions in Ireland, the Dublin clubs are little less active than usual, and on Saturday last carried out a very successful hill-climb near Tallaglit. The course was about half a mile in length, of moderate and even gradient, and quite safe, albeit by no means straight. The results were as follows:

LIGHTWEIGHTS.—1, J. A. H. Waters (2½ Diamond); 2, D. Allen (2½ Sun); 3, R. Humphreys (2¼ Velocette).

300 TO 550 C.C.—1, G. Bewley (3½ Norton); 2, J. Doyle (2¾ Douglas); 3, R. Kyle (3½ Norton).

550 C.C. AND OVER.—1, H. Oxer (5-6 Zenith); 2, W. J. Fagan (5 Indian); 3, W. L. Holding (6 Enfield).

SIDECARS.—1, W. Burney (8 Enfield); 2, S. Woods (7-9 Harley-Davidson); 3, Hon. R. Massey (7-9 Harley-Davidson).

WINNERS' HANDICAP.—1, J. A. H. Waters (2¼ Diamond); 2, H. Oxer (5-6 Zenith); 3, G. Bewley (3½ Norton).

THE ARBUTHNOT TROPHY TRIAL.

WE have just received a copy of the programme of the Arbuthnot Trophy Trial, which is open to any solo motor cyclist who is a commissioned or subordinate officer of H.M. Navy, the Royal Naval Reserve, or Royal Naval Volunteer Reserve on the active list on the date on which entries close.

Entries must be received by the Secretary, the Auto Cycle Union, 83, Pall Mall, London, S.W.1, on or before 5 p.m. on Monday, June 13th, 1921. Each entry must be accompanied by a fee of £1 1s., and if the entrant is not on the competition register of the Union by an application for registration, the fee for which is 10s. 6d., or, in the case of a member of a club affiliated to the Auto Cycle Union, 5s.

The trial will extend over one and a half days, and on Friday, July 1st, a start will be made from Sevenoaks, which will be the centre from the morning of the trial till the next day. The headquarters will be Bligh's Hotel.

A Hilly Course.

A hilly course, including some of the hills covered in the recent A.C.U. One Day Trial, will be traversed twice on the first day and once on the second day, after which competitors will proceed to Brooklands in time to see the finish of the 500 Miles Race.

A system of marking will be employed whereby competitors are credited with a total of 200 marks at the beginning of the trial, ten being deducted for any stop on named hills on the first circuit, fifteen on the second circuit, and twenty on the third circuit. The order of starting will be in the order of receipt of entry, at one-minute intervals.

An average speed of 18 m.p.h. will be the minimum, and the maximum will be 20 m.p.h., allowances being made for ten-mile limits and difficult country. There will be no secret checks.

NORTH-WESTERN CENTRE "CHAMPIONSHIP."

THE judges, having investigated all official observers' reports, now issue the following results :

NORTH-WESTERN CENTRE CHAMPION.—Hugh Gibson, Liverpool Motor Club (8 Royal Ruby), 88 points, awarded North-Western Centre Championship for 1921 and holder of 200 gn. Deansgate Challenge Cup, 1921. Second : Bernard Caldwell, Warrington Club (3½ Norton), 86 points. Third : O. Entwistle, Bury Club (3½ Sunbeam), 85 points.

AWARDS IN CLASSES.

CLASSES 1 AND 2 COMBINED (Solo Machines to 350 c.c.).—S. Eastwood, Warrington Club (2¾ Royal Ruby), 91 marks, first-class award; E. Jones Southport Club (2½ Velocette), 73 marks, no award.

CLASS 3 (Solo Machines from 351 c.c. to 600 c.c.).—Bernard Caldwell, Warrington Club (3½ Norton), 91 points, first-class award; O. Entwistle, Bury Club (3½ Sunbeam), 90 points, second-class award; T. H. Picton, Southport Club (3½ Sunbeam), 85 points, second-class award; H. Hulme, North Cheshire Club (4 Triumph), 84 points, second-class award); A. Moses, Liverpool Club (3½ Sunbeam), 74 points, no award; J. Shaylor, Liverpool Club (3½ Sunbeam), 73 points, no award; A. Douglas, Southport Club (3¾ Scott), 62 points, no award.

CLASS 6 (Sidecars up to 500 c.c.).—O. E. Carter, Manchester Club (3 A.B.C.), 87 marks, first-class award; T. Simmister, Macclesfield Club (3½ Norton), 67 marks, no award.

CLASS 7 (Sidecars from 501 c.c. to 750 c.c.).—M. Gavson, Manchester Club (4 Triumph), 90 marks, first-class award; J. F. Gibbon, North Cheshire Club (4 Triumph), 85 marks, second-class award.

CLASS 8 (Sidecars over 750 c.c.).—H. Gibson, Liverpool Club (8 Royal Ruby), 93 marks, first-class award; S. Bann, Macclesfield Club (7 Matchless), 87 marks, no award; A. Green, Stalybridge Club (8 Excelsior), 49 marks, no award.

No competitor other than the above completed the course within the rules of the Trial.

BRISTOL TO NEWQUAY via PORLOCK.

PORLOCK and Lynton were the chief test pieces in the Bristol M.C.C. trial for the Kickham Cup to Newquay on the 14th inst., but few failures —three only—were recorded. Full results have now been worked out, and are as under :

KICKHAM CUP.—E. W. Spencer (4 Omega-Blackburne). A faultless ride, dead on time at all points, and excellent climbs of Porlock and Lynton, error 0m.

GOLD MEDALS.—F. G. Mann (7-9 Harley-Davidson sc.), S. Hodges (3 A.B.C.), both excellent performances, error 1m.; W. H. Ings (4 Triumph), 10m.

SILVER MEDALS.—B. W. Hall (3½ Sunbeam sc.) and C. W. Rankin (8 Morgan).

BRONZE MEDALS.—K. J. Woods (3½ Wilkin sc.), Eli Clark, jun. (3½ Beardmore-Precision), F. A. Simpson (2¾ Douglas), E. S. Waycott (8 Clyno sc.), H. W. Jacobs (8 Zenith), R. B. Walker (4 Norton sc.), and E. Leslie Smith (4 Triumph).

THE INTERNATIONAL SIX DAYS TRIALS.

SOME further particulars concerning this interesting and important event have reached us from Geneva. An outline of the regulations and a map of the course appeared in *The Motor Cycle* of February 3rd.

The competition is open to all members of national motor cycle unions affiliated to the F.I.C.M. ; to all holding competitors' licences issued by the ruling body of their own particular country ; to all makes of motor cycles, sidecar outfits, and two-seated cycle cars. Motor cycles must be in the following classes : 250 c.c., 350 c.c., 500 c.c., 700 c.c., and 1,000 c.c. ; sidecar outfits 600 c.c. and 1,000 c.c. ; and two-seated cycle cars up to 1,100 c.c.

The event is a six days reliability trial extending over 1,125 miles. Each day's journey will be divided into two sections, which must be covered at an average speed of 30 km. (approximately twenty miles) an hour. The time limit is likely to be varied over several of the principal mountain passes.

The International Trophy, which is presented by the British Cycle and Motor Cycle Manufacturers' and Traders' Union, is at present held by the Swiss Club, and will be put up for competition by a team of three riders chosen by each nation.

Entries may now be sent to the Secretary, Union Motocycliste Suisse, 42, Rue du Rhône, Geneva, Switzerland, and cost 300 francs for machines entered by manufacturers, agents, or drivers in their employ, and 150 francs for private owners. Entries close at ordinary fees on June 25th, 1921, and at double fees up to July 10th, 1921.

Competitors in the Birmingham M.C.C.'s trial for the Sangster Cup having a "breather" after the long ride which culminated in a fast climb up Countisbury Hill. Giles-(A.J.S. sidecar), Gus Khun (Verus) immediately behind, G Denley (Velocette), and Sam Hall (Sunbeam) are noticeable in the photograph.

Major Hyde Resigns.

Major C. Water Hyde has resigned his position as motor cycle sales manager for the B.S.A. Co. owing to ill-health.

Welsh Speed Trials.

The illustration recently published of the speed trials held by the Neath M.C.C. showed E. Walters (Douglas), and not H. Lewis as stated. The former won the 350 c.c. novice class.

Wanted, 1,000 Motor Cycles per Year.

Such is the heading of an advertisement that appeared last week in a Midland daily paper. It is stated that they are required for the Dutch East Indies, and that they *must be able to compete* with two well-known American big twins *in quality, durability, and price.* Comment seems superfluous.

Another Price Reduction.

It is announced that from to-day onwards the price of the standard spring frame model 3½ h.p. Beardmore-Precision will be reduced from £105 to £85. It will be remembered that the specification includes kick-starter and selective clutch two-speed gear, automatic lubrication, and a specially constructed welded frame which embodies the tank.

The Motor Cycle Grand Prix.

The blue riband of speed events on the Continent in 1921 will be the Motor Cycle Grand Prix, organised by the Union Motocycliste de France, 8, Place de la Concorde, Paris, on July 24th. Entries close at ordinary fees (400 francs) on May 31st at six o'clock.

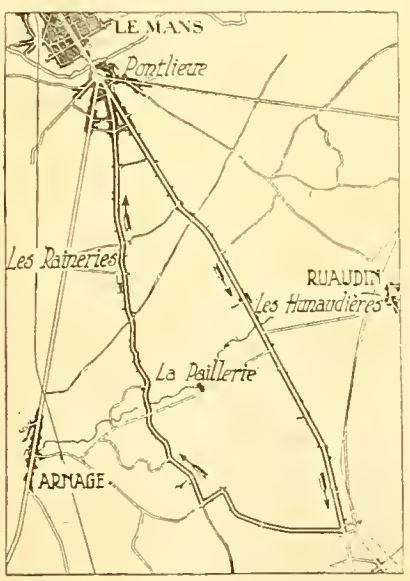
So far the list of entries is exclusively composed of British machines with British riders, which stand as follows: Four B.S.A.'s (the first three being ridden by Pickering, Gibbs, and Pool) and three Nortons (ridden by Victor Horsman, Hubert Hassall, and Graham Walker).

The course is a triangular one of approximately 10½ miles, and is situated quite close to Le Mans.

Found.

In Cowdray Park, Midhurst, articles of clothing and tools, by Mr. E. C. Bannister, West Street, Midhurst; in Queen's Drive, Liverpool, a tool kit, by Mr. J. W. Mackarel, 52, Royston Street, Edge Hill.

T.T. and Summer Number.



The annual special T.T. and Summer Number will be published on June 16th, the day of the Senior T.T. race.

A Record Week for the A.C.U.

Despite strikes and the general trade depression, the Auto Cycle Union is able to make the gratifying announcement that for the last week its income from new subscriptions was the largest of any week since it commenced operations in 1903. At such a time as the present, steadily increasing membership of the national motor cycling organisation is an entirely healthy sign.

Power Alcohol.

An experimental consignment of the new patent alcohol fuel "Natalite" arrives at the Port of London this week from South Africa. "Natalite" has been manufactured, and has been in general use in South Africa for four years, and is now also being produced in East Africa, India, and Australia, but this is the first consignment to reach this country, and is being imported under special permit given by the Excise and Customs authorities. The whole of the first consignment will be used exclusively for demonstration and experimental purposes. It is said that tests have shown that Natalite will give as good mileage as petrol.

The course of the great French classic race—the Grand Prix—to be held on July 24th.

Special Features.

THE COOLING OF MOTOR CYCLE ENGINES.

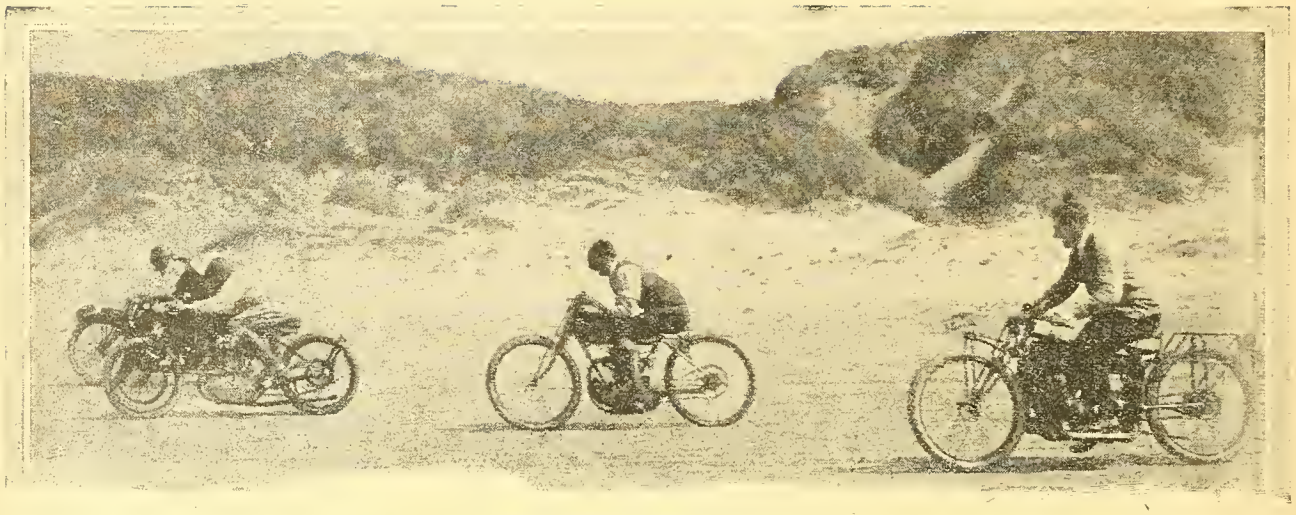
TO EDINBURGH IN A SIDECAR.

Why?

In the Midlands the term "combo" is used quite extensively to designate sidecar outfits.

A Private Trial in S. Devon.

Capt. P. Pike, who is well known as a competition rider on lightweight motor cycles, recently organised a trial in Exeter which attracted over fifty starters, including four ladies. The course was an easy one, being practically a top gear route. The prize-winners were: Ladies' prize, Miss Whitehead. Gentlemen's prizes: 1, A. M. Knill (Indian); 2, J. Clarke (Norton), five marks lost.



"Found"—a Sequel and a Moral.

A fortnight ago a reader notified us regarding the finding of a toolkit on the Sevenoaks Road. As a sequel to the publicity of these columns he now writes:

"I have had five applications for the tools found, but the *owner* has not yet written. If five applied and not the right one, which makes six, and these were all lost on one road in one week, can *The Motor Cycle* or any reader please tell me how to work out the sum to get at the approximate number lost in one year? Oh! ye makers and designers!"
—H. GRAVETT.

The Dustless Road Problem.

The earliest cure for dusty roads was water, and very often it was also the worst possible thing for them. We may still (says *The Autocar*) see the old pumps standing all along the great Bath Road and other highways; and it has often made motorists wonder why they were supposed to have invented dusty roads at the same time as motors. Then came tar, and when the dust plague ceased new plagues took its place. There was wet tar, tar as put down by local experts, tar under the influence of a hot sun, tar with a flat tyre, tar with a new body. How long, one wonders, are motorists going to put up with tar—motorists who are paying eight millions or so a year for the upkeep of the British highways? If there were no substitute for tar we might grin and bear it, but of late a new mixture called by the old name of bitumen has been imported—a substance that can do all that tar can do, makes no mess of the roads or of one's cars, costs a little more at first, but is guaranteed to last ten times as long.

SOUTHPORT SPEED TRIALS.

Four very much stripped machines at speed in the 500 c.c. class. Second from the left is F. Collard on the T.T. Rover he will ride on the Island next month. The others are mounted on A.B.C.'s (two) and a 2¾ h.p. Diamond.

A Week of Speed Events.

On the Saturday following the T.T. races the North-western Centre A.C.U. will hold its speed trials on Morecambe Promenade.

Obituary.

By the sad death of Mr. Guy Jeffreys, following his fall at the Orton Scar hill-climb on Whit-Monday, the motor cycling world has lost an excellent sportsman. Jeffreys was an exceedingly popular figure up North.

A Settler in the Antipodes.

C. R. Little, who drove one of the Triumphs in the A.A. 5,000 miles benzole test, is settling in Sydney, Australia, and will specialise in the selling and repairing of English motor cycles.

"Motor Cycles and How to Manage Them."

The twenty-second edition of "Motor Cycles and How to Manage Them," which has been carefully revised and brought up to date, is now ready, and copies may be obtained upon application to Messrs. Iliffe and Sons Ltd., 20, Tudor Street, E.C.4. The price is 2s. 6d. net, or by post 2s. 10d.

Bonuses to Competition Riders.

We mentioned some time ago that the Manufacturers' Union approved the recommendations of the Proprietary Article and Tyre Manufacturers Sections to the effect that such manufacturers should not offer or pay bonuses or rewards directly or indirectly to competition riders, nor give or loan to such riders any of their proprietary articles or accessories.

We now learn that the terms of the bond in this connection, if necessary, will be enforced by penalties, or in such a manner as may preclude any offending member from exhibiting at the Show.

It would appear that cases of competition riders soliciting or receiving payments or gifts will also receive attention with a view to steps being taken in accordance with the Bribery and Corruption Acts.

It is intended that everything that can be done shall be done to rid the sport of the pseudo-amateur.

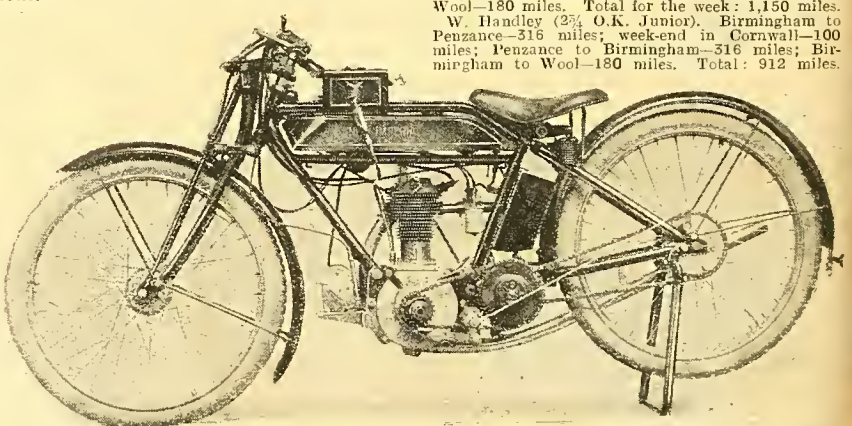
Clubs confined to Riders of Particular Makes.

There is a Harley-Davidson M.C.C. confined to riders of Harley-Davidsons; the Connaught M.C.C. confined to riders of Connaughts; and now we hear of the Old Ford M.C.C. confined to owners of —no, not what you think, good reader—any make of motor cycle! By the way, what has become of the Single Gear Club nowadays?

Contrasts in Motor Driving Permits.

In Belgium, every man, woman, or child is free to drive any type of motor car without permit, certificate, or registration of any kind. The French applicant for a driving licence, on the other hand (says *The Autocar*), begins by paying a twenty franc tax, makes a formal application on stamped paper, and has to submit to a practical examination, which may consist of an hour's drive through dense Paris traffic or a ten minutes' run over a deserted national highway, according to the whim of the inspector. Once obtained, the licence is good for all time, unless withdrawn for some really serious fault, and it is not available for endorsement.

A Busy Two Months.



June and July are to be busy months for competition riders of both the trial and speed classes. In addition to the T.T. races on the 14th and 16th of June, there is the M.C.C. Team Trial, for *The Motor Cycle* Cup on the 25th, the Arbuthnot Trophy event on July 1st and 2nd, and the 500 mile race at Brooklands on the latter of these two dates, while on the 9th there are the St. Andrews Speed Trials, the Scottish Six Days from the 11th to the 16th, and the Motor Cycle Grand Prix on the 24th.

Lightweights for Strenuous Work.

It is not so very long ago that lightweights were not regarded as serious long distance touring mounts, but their post-war successes in trials have proved that they are capable of the most strenuous work. As a matter of general interest we give below details of the Whitsuntide mileages of two O.K. riders who are with the Tank Corps at Wool, Dorset, and obtained leave to enter competitions.

N. Hall (2¾ O.K. Junior) rode from Wool to Birmingham with his colleague on the carrier—180 miles; from Birmingham to London—120 miles; London to Edinburgh—400 miles; Edinburgh to Birmingham—300 miles; Birmingham to Wool—180 miles. Total for the week: 1,150 miles.

W. Handley (2¾ O.K. Junior). Birmingham to Penzance—316 miles; week-end in Cornwall—100 miles; Penzance to Birmingham—316 miles; Birmingham to Wool—180 miles. Total: 912 miles.

The T.T. New Imperial, which made its first appearance at the A.C.U. Western Centre hill-climb at Chatcombe. The engine is the new 350 c.c. J.A.P.

SPEED AND SUNSHINE.

Success of the Improved Arrangements Varied Racing at the B.M.C.R.C. Second Members' Meeting.

Start of the Senior T.T. Class Race, which was won by J. L. Emerson—a splendid debut with his Douglas.

BRILLIANT sunshine, magnificent racing, and the removal of general headquarters to the "fork" combined to make the second B.M.C.R.C. members' meeting quite the jolliest little motor cycle event ever held at Brooklands. Under the old regime the general public filtered into Brooklands at one gate, whilst members, competitors, and the new rich entered by another.

This separation of the sheep from the goats did not make for the *camaraderie* which should hall-mark any motor cycle meet, and the fact that what Sam Weller would describe as a double extra million magnifying power telescope was necessary to follow racing from the paddock cast a further gloom over past races.

On Saturday everybody got the freedom of the entire track for 3s., exclusive of a small fee for his car or cycle. Portable hurdles closed the mouth of the finishing straight, and visitors had the thrill of scorching the wrong way down the straight before they parked their machines, and leant against the aforesaid hurdles.

An Omission.

There was one very serious blot on the organisation, which will doubtless be remedied before the next fixture—the only liquids obtainable at the fork were oil and petrol. As the sun was blistering, and concrete is a magnificent reflector, the absence of a bar was keenly felt by all present.

In other details the officials deserve every possible compliment. A small covered stand was available opposite the timekeepers' van. The starters' numbers were pinned to the front of this, and each man's lap register was notified by swinging down a green card bearing the correct number. The genial timekeepers worked out every item of interest in record time, and thereby much facilitated the labours of hot and thirsty pressmen.

Turning to the more technical side of the races, the card was framed as a dress rehearsal for the T.T. But it partly failed in its purpose, as our racing cracks are apt to be coy, and the absentees were possibly more notable than the contestants. The Triumph team was conspicuous by its absence. Is the firm's new engine doing too much or too little for a public *début?* Sunbeams were indeed represented, but Messrs. Brown and Chawner do not yet rank as the Wolverhampton first strings, whatever their fame may be when T.T. week is over. It looked as if this pair might be gaining a little speed experience, or testing some new gadget, but they cannot have been out for blood. No Scotts were visible. No Levises. No Rovers. No B.S.A.'s. No James. Of the machines which ran, the Wooler, Douglas, Coulson, A.J.S., Norton, Indian, Sunbeam, and Blackburne were credited with being actual Manx models.

The twenty-four lap (65m. 394 yards) Junior T.T. was the first event on the card, and was framed to give entrants a chance of beating the hour record, which, for the 350 c.c. class, stands at 63m. 696 yards. Of twenty-two entries, Eve and Ware (Martins), Remington (Blackburne), J. S. Preston (Singer), V. Longden (Coulson), and McNab (Trump), declined. H. R. Davies, on his T.T. A.J.S., was a screaming favourite at two to one on—a ridiculous price in an hour's race with sixteen starters—and four to one bar one was freely offered.

The starters were :

		Bore and stroke.	c.c.
1.	Capt. A. G. Miller (Martin-Jap)	70 ×90	347
3.	Harry Martin (Martin-Jap) ...	70• ×90	347
5.	F. A. Longman (Wooler) ...	60.5×60	345
6.	S. E. Longman (Wooler) ...	60.5×60	345
7.	J. F. Hull (Wooler)	60.5×60	345
9.	C. Fairweather (Blackburne)	71 ×88	349
10.	E. Longden (Coulson-Jap) ...	60 ×61	348
12.	Tudor Thompson (Douglas) ...	60.5×60	349
13.	A. Watson (Douglas)	60.5×60	350
14.	J. V. Prestwich (Massey-Arran-Jap)	64.5×76	249
15.	J. S. Holroyd (Massey-Arran-Jap)	71 ×88	349
17.	G. S. Smith (Morris)	67 ×70	247
18.	A. A. Prestwich (Dot-Jap) ...	70 ×90	346
20.	H. R. Davies (A.J.S.) ...		
21.	T. Thorpe (Douglas)	60.5×60	349
22.	F. Thorpe (Douglas)	60.5×60	349

The only real newcomer was the Morris, the latest "hotstuff" two-stroke, which is expected to appear shortly as a standardised sports model, with a welded lugless frame and a "no effort" stand. It has an aluminium cylinder with steel liner and a detachable head.

When the flag fell, Davies immediately streaked away from the field, and was an obvious winner if stamina supplemented speed. He was followed at the conclusion of one lap by Fairweather's Blackburne, A. A. Prestwich's J.A.P., F. Thorpe's Douglas, and Eric Longden's Coulson, but a single lap sufficed to give the speedy A.J.S. a lead of perhaps half a mile. Some of the men were early in trouble. Harry Martin and T. Thorpe never came round. Tudor Thompson had a stop near the fork. J. V. Prestwich was apparently holding on part of his carburetter with one hand, and actually steered one-handed for twenty-two laps, his engine missing badly if his muscles relaxed their grip. He had hardly passed on his first lap before Davies was round again.

Duelling for Places.

On the third lap A. A. Prestwich dropped back to from third to sixth, and on his fifth lap he had a stop at the fork. But for the first ten laps the situation may be summed up by saying that H. R. Davies was piling up an ever-increasing lead from a quartette of respectful followers, of whom Fairweather was always an easy second, and quite possibly driving his engine a little gently in the hope that the A.J.S. would crack up. Behind the pursuing Blackburne, Longden's Coulson and F. Thorpe's Douglas fought a determined duel, each leading in turn. Capt. Miller's Martin was a consistent fifth. Lower down the list the machines were perceptibly slower, and the positions were more variable.

Just when the crowd was settling down to expect a soft victory for the triumphant A.J.S., the positions at the end of the ninth lap seemed to indicate that

Speed and Sunshine.—

Fairweather was picking up ground. The end of the tenth lap saw the A.J.S. pass comparatively slowly. It was heard to falter in its crackle, and Davies was peering anxiously down at his machine. Lap 11 saw Davies running second to the Blackburne, and hotly pursued by Longden and F. Thorpe. By lap 12 Davies had dropped back to fifth place, and on the next lap he was missing. Interviewed later, he refused to say what had stopped him, but the behaviour of his machine did not suggest any actual fracture. Fairweather gratefully accepted his lead, and held it from the ninth to the eighteenth lap, in spite of a replenishment stop, in which he also seemed to adjust a tappet. Longden could not, or would not, overhaul him, and Thorpe's Douglas had ceased to overtake Longden at intervals. The nineteenth lap brought the second sensation of the race, for Fairweather was missing when due, and lap 20 saw Eric Longden on the Coulson-Jap a good mile ahead of Thorpe, with Capt. Miller lying third far back. The trio raced like this for three laps, and then Thorpe's Douglas fell back, and Tudor Thompson pressed a sister machine in chase of Miller. On the last lap Thompson caught Miller, thus working up gradually from twelfth to second, and the finishing order was:

	h.	m.	s.	m.p.h.
1. Eric Longden (Coulson-Jap)	1	11	35	54.67
2. Tudor Thompson (Douglas)	1	14	18	52.67
3. Capt. A. G. Miller (Martin-Jap)	1	14	30⅘	52.52
4. F. Thorpe (Douglas)	1	16	28⅕	51.02

Of the rest, J. V. Prestwich (Massey Arran) did 23 laps in 1h. 19m. 57⅖s.; G. S. Smith (Morris), 22 laps, 1h. 17m. 19s.; F. A. Longman (Wooler), 21 laps, 1h. 19m. 15⅘s.; J. F. Hull (Wooler), 19 laps, 1h. 14m. 35s.; A. A. Prestwich (Dot Jap), 19 laps, 1h. 19m. 40s.; J. S. Holroyd (Massey-Arran), 18 laps, 1h. 19m. 57⅖s.; C. Fairweather (Blackburne), 18 laps, 51m. 22⅗s.

A Popular Victory.

No records were beaten. Longden's victory was very popular, as he has done a lot of racing without much luck. J. V. Prestwich's grit in covering the distance steering one-handed is notable, as are the first time performances of the Morris and the Massey-Arrans.

The scratch race of three laps for machines up to 1,000 c.c. attracted only five starters, namely:

C. F. Temple (Harley-Davidson), 988 c.c.
D. H. Davidson (Harley-Davidson), 988 c.c.
O. M. Baldwin (Matchless, 4-valve J.A.P.), 994 c.c
Capt. J. Woodhouse (Martin), 996 c.c.
E. Remington (Blackburne), 998 c.c.

Temple was favourite at even money, and they got away to a fine start. Four of the men roared past "under a handkerchief" after one lap, with Woodhouse eighty yards astern. Davidson, Temple, Remington, and Baldwin was the apparent order of the leading quartette, but Temple was going best of the bunch. The second time round Temple had dropped to fourth place, with Woodhouse still last, but the favourite caught both the Britishers on the third lap, so that the final placings were:

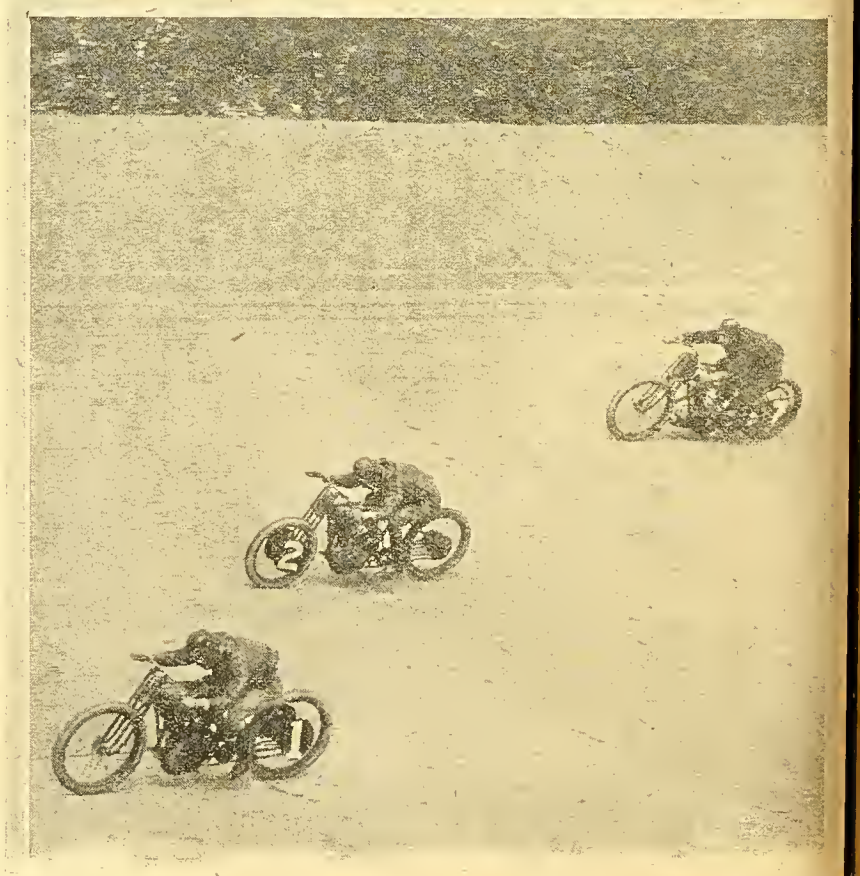
	m.	s.	m.p.h.
1. D. H. Davidson (Harley)	5	39⅘	86.37
2. C. F. Temple (Harley)	5	41⅕	86.02
3. O. M. Baldwin (Matchless)	5	44	
4. J. Woodhouse (Martin)	5	55⅖	
5. E. Remington (Blackburne)	6	9	

Temple registered the fastest lap at 90.09 m.p.h.

The twenty-eight lap (76m. 167 yards) Senior T.T. was plotted to cover incidental attacks on the hour record of 72m. 841 yards, and was regarded by the wiseacres as a probable gift for the Douglas team. Five started, and with stalwarts like Emerson and S. L. Bailey in the saddle business was evidently intended. No other make had a real team out, though individual entrants looked dangerous enough. The trouble was to pick out the machine with which the Douglas people might declare to win, and popular fancy identified the ex-A.B.C. wizard, Emerson, who ranks with O'Donovan among the super-speedsters. The betting ran evens Emerson and Horsman, twos Kaye Don, and threes Le Vack.

The Twenty Starters.

	Bore and stroke.	c.c.
O. M. Baldwin (Martin M.A.G.)	64 × 77	496
G. S. Smith (Martin-M.A.G.)	64 × 77	496
W. R. Brown (Sunbeam)	85 × 88	499
R. C. Chawner (Sunbeam)	85 × 88	499
V. Horsman (Norton)	79.5×100	498
Kaye Don (Norton)	79 ×100	490
T. Thompson (Douglas)	68 × 68	494
J. Emerson (Douglas)	68 × 68	494
R. Bond (Rudge)	85 × 88	499
H. Le Vack (Indian)	79.3×100.8	499
E. Longden (Coulson-Jap)	64.5× 76	498
S. L. Bailey (Douglas)	68 × 68	499
T. Thorpe (Douglas)	68 × 68	499
F. Thorpe (Douglas)	68 × 68	499



Those who complain that Brooklands is bumpy should note that after E. Longden had won a twenty-four lap race he was still game to ride in a faster event of twenty-eight laps. Thompson and F. Thorpe had also done their twenty-four laps.

Emerson got away best, and Horsman was badly left, his engine refusing to fire for eighty yards or so. At the end of lap one Emerson was leading Bailey by perhaps fifty yards, and some distance behind came a knot of men who were presently dubbed the "clump" by the crowd as they lapped in a tight bunch for a prolonged period.

All in a Bunch.

The composition of the "clump" varied for a time, but on lap two, when Horsman, who had recovered from his bad start, passed Bailey and was chasing Emerson, the "clump" consisted of Don, Le Vack, T. Thorpe, Brown, Chawner, and Longden in the order named. For six laps Horsman hunted Emerson hard, and may have gained a little at times, but never fully atoned for his unfortunate start. The "clump" lapped like a solid body with a slow internal circulation. After six laps Horsman's petrol tap closed, and pushed him back from second place to eleventh.

At this the "clump" began to sit up and take notice. Emerson still kept his imposing lead, his engine sounding as clear and willing as it did on the first

C. F. Temple (7-9 Harley-Davidson), who made fastest lap, but finished second, fighting a losing battle with D. H. Davidson (similarly mounted), who won this event, the 1,000 c.c scratch race. E. Remington (8 Blackburne) is the third man.

Speed and Sunshine.—

round, but his immediate attendants varied. T. Thorpe was the first to evince ambitions to be runner up, and from the seventh to the eleventh lap he filled the position, after which Le Vack dispossessed him, whilst Bailey lay fourth with a watching brief against Le Vack, and Kaye Don ran a steady fifth. To cut a long story short, Emerson's Douglas was as reliable as it was fast, and, in spite of a longish replenishment stop, he finished the easiest of winners. Le Vack had no great difficulty in staving off the challenges of two more Douglases, and this pair in turn were just too fast for Kaye Don's Norton. Horsman retired with a broken saddle, and the placings were:

	h.	m.	s.		m.p.h.
1. J. L. Emerson (Douglas)	1	4	37⅖	..	70.65
2. H. Le Vack (Indian) ..	1	6	42⅖	..	68.44
3. T. Thorpe (Douglas) ..	1	6	55	..	68.22
4. Kaye Don (Norton) ..	1	9	11⅘	..	65.99
5. F. Thorpe (Douglas) ..	1	11	18	..	64.03
6. O. M. Baldwin (Martin-M.A.G.)	1	16	11	..	59.93
7. G. S. Smith (Martin-M.A.G.)	1	18	10	..	58.41

S. L. Bailey had trouble near the finish, but completed 27 laps in 1h. 7m. 31⅗s. The distances covered by the three leaders in an hour were, Emerson, 70m. 868 yards; Le Vack, 68m. 864 yards; and Thorpe, 68m. 704 yards. No records were broken. The magnificent showing of the Douglas team will not escape attention, especially with regard to the T.T., and the change in their transmission since 1920 will by no means impair their chances.

The passenger three lap handicap was something of an anti-climax, though fine speeds were attained. The starters were:

	c.c.	m. s. scr.
W. D. Hawkes (Morgan-M.A.G.) ..	1,098	
D. H. Davidson (Harley sc.)	989	0 6
W. D. Marchant (Zenith-Jap) ..	986	0 18
E. B. Ware (Morgan-Jap sc.)	1,088	0 18
J. A. Masters (Harley sc.)	989	0 39
S. E. Longman (Harley sc.)	989	0 51
E. C. Baragwanath (Zenith-Jap sc.)	986	0 51
O. de Lissa (Motosacoche sc.) ..	994	1 0
R. Dequin (Zenith-M.A.G. sc.) ..	994	1 18
E. Longden (Morgan-Jap)	986	1 27
Capt. R. Charlesworth (Zenith-Jap sc.)	744	2 0
F. A. Longman (Ariel sc.)	498	3 36

Marchant's outfit was distinguished by a vertical post above the sidecar axle, joined by a cross tube over the chair to the saddle-pillar of the machine. Several racers in this class have a good deal to learn about getting off the mark; S. E. Longman and W. D. Marchant stole many yards by fine work in this respect. The Ariel was naturally leading after one lap, with Charlesworth still hanging on to his start, and Masters and Davidson making up ground fast. Dequin pulled up with plug trouble. On the second lap de Lissa was in trouble, the Ariel was still in front, and S. E. Longman had commenced to look very dangerous. The Morgans fell out, and the finishing order was:

1. S. E. Longman (Harley sc.) ..	65.78	m.p.h
2. D. H. Davidson (Harley sc.) ..	61.87	..
3. F. A. Longman (Ariel sc.) ..	54.22	..

Charlesworth and Masters were pressing the Ariel hard. The Harleys thus shared with the Douglases the principal honours of the day.

A MAIN ROAD HILL-CLIMB.

Open Event of the A.C.U. Western Centre. 2¾ h.p. Machine makes Fastest Time.

APPARENTLY a special providence watches over the weather conditions of the A.C.U. Western Centre, for last Saturday's event at Chatcombe Hill was carried out under a cloudless sky and burning sunshine.

Perhaps it was the heat of the day also which accounted for the otherwise unaccountable misfiring which seemed to trouble almost every competing machine. Without doubt the atmosphere was so warm that a carburetter tuned on the rich side for a normal day would be excessively rich under such conditions.

A main road hill, although granted a comparatively little used one, was used, and only one or two short delays occurred for the passage of slow local traffic. Timing by means of telephones was arranged, and the speed at which the classes were run off was excellent. No new models or unconventional machines were in use, except the 2½ h.p. New Imperial T.T. machines, and Dance (with his 2¾ Sunbeam) had it all his own way, especially as G. S. Boston, who was entered to ride his 2¾ h.p. A.J.S., was perforce a spectator, his machine being unready.

Chatcombe Hill is not one on which thrills are to be seen, as its surface is perfect, the gradient very even (about 1 in 8), and there is only a slight left-hand bend; consequently the proceedings were a little monotonous. Some of the private owners, too, were decidedly slow, and in one or two classes some amusement was caused by the "finish of class" banner bearer, mounted on a 3½ h.p. Sunbeam, visibly overhauling the last competitor, whom he followed.

The measured course was half a mile, and the fastest time of the day, by G. Dance (2¾ Sunbeam), was 31⅘s., equalling 57.32 m.p.h. Fastest car time was 34⅖s. (52.85 m.p.h.), by A. Frazer Nash (G.N.).

Formula results were not worked out at the finish, and the awards will be announced later. The placings of the first three in each class decided on time are as follows:

CLASS 1: Solo, up to 275 c.c. (Open).—H. Newey (2¼ Levis), 41⅗s.; G. Denley (2¼ Velocette) and R. E. Pugh (2¼ Levis), 45⅖s., tied; B. Kershaw (2¼ New Imperial), 47s.

CLASS 3: Solo, up to 350 c.c. (Open).—B. Kershaw (2¼ New Imperial), 49⅘s.; W. M. Hartland (2¾ Velocette), 53s.; A. H. Camery (2¾ Cotton), 55⅗s.

CLASS 4: Solo, up to 350 c.c. (Private).—S. A. Such (2½ Connaught), 71⅘s.; W. H. Buckle (2½ Connaught), 73⅗s.

CLASS 5: Solo, up to 500 c.c. (Open).—L. Paynter (3½ Norton), 35⅗s.; T. B. G. Vale (3½ Norton), 35⅘s.; W. B. Gibb (3½ Douglas), 36⅗s.

CLASS 6: Solo, up to 500 c.c. (Private).—W. Worrall (3½ Sunbeam), 36⅘s.; R. Fellows (3½ Sunbeam), 40⅖s.; E. Griffiths (3½ Norton), 43⅘s.

CLASS 7: Solo, up to 750 c.c. (Open).—G. Dance (2¾ Sunbeam), 33⅗s.; W. B. Gibb (3½ Douglas), 37s.; J. Thomas (3½ Norton), 37⅘s.

CLASS 8: Solo, up to 750 c.c. (Private).—W. Worrall (3½ Sunbeam), 36⅘s.; R. Fellows (3½ Sunbeam), 37⅖s.; E. Griffiths (3½ Norton), 38⅘s.

CLASS 9: Solo, Unlimited (Open). *G. Dance (2¾ Sunbeam), 31⅘s.; I. P. Riddoch (8 Zenith), 33⅗s.; L. Paynter (3½ Norton), 34⅘s. *Fastest time of the day.

CLASS 10: Solo, Unlimited (Private).—I. P. Riddoch (8 Zenith), 34s.; W. Worrell (3½ Sunbeam), 36⅘s.; R. Fellows (3½ Sunbeam), 37⅗s.

CLASSES 11 and 12: Solo Machines, on Formula (Open and Private).—Results not yet announced.

CLASS 15: Passenger, up to 600 c.c. (Open).—L. Paynter (3½ Norton sc.), 43⅗s.; G. Dance (2¾ Sunbeam sc.), 43⅘s.; E. Kickham (3½ Douglas sc.), 44⅗s.

CLASS 17: Passenger, up to 750 c.c. (Open).—L. Paynter (3½ Norton sc.), 41⅗s.; G. Dance (2¾ Sunbeam sc.), 42s.; J. Thomas (3½ Norton sc.), 43⅗s.

CLASS 19: Passenger, Unlimited (Open).—H. R. Godfrey (8 G.N.), 39⅗s.; G. Dance (2¾ Sunbeam sc.), 42s.; L. Paynter (3½ Norton sc.), 42⅗s.

CLASS 20: Passenger, Unlimited (Private).—I. P. Riddoch (8 Zenith sc.), 41⅗s.; R. J. Blick (7·9 Harley-Davidson sc.), 52s.; W. A. Carr (8 Morgan), 55⅗s.

CLASSES 21 and 22: Passenger Machines, on Formula (Open and Private).—Results not yet announced.

CLASS 23: Cycle Cars, up to 1,100 c.c. (Open).—H. R. Godfrey (8 G.N.), 37⅗s.; H. F. S. Morgan (8 Morgan), 42s.; W. A. Carr (8 Morgan), 54⅗s.

Go! E. Kickham (3½ Douglas sidecar) crossing the starting line at the Western Centre hill-climb

OPENING EVENT AT STILE KOP.

No Waiting! A Feature of the Coventry and Warwickshire M.C. Hill-climb last Saturday.

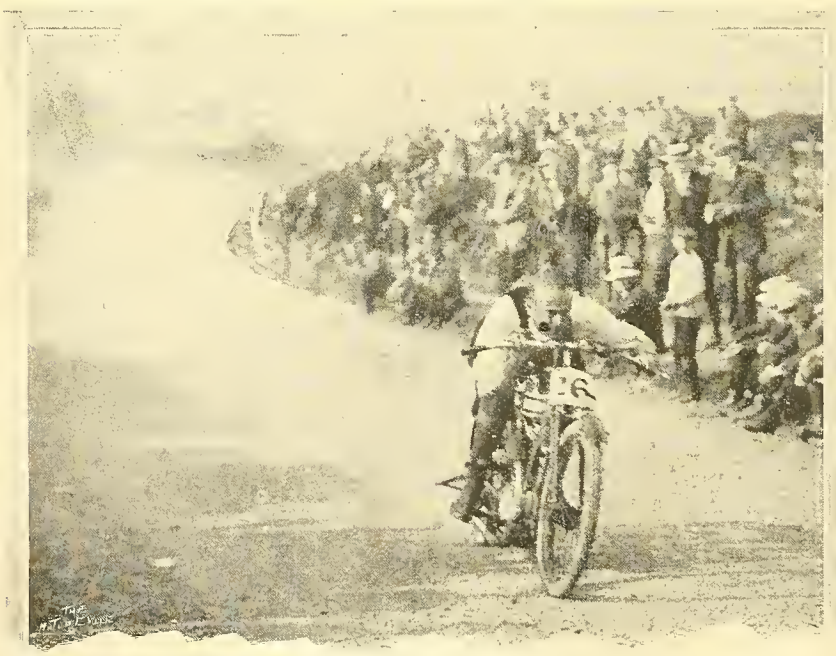
AN entry of nearly 180 and a hot summer day attracted several thousand spectators to Stile Kop last Saturday to witness the hill-climb organised by the Coventry and Warwickshire M.C. Never have we seen so many visitors lining the Rugeley hill, showing the growing popularity of motor cycle events as a sport for the general public.

The presence of T. C. de la Hay on his overhead valve Sunbeam and H. W. Hassall with one of the T.T. Nortons promised some fast speeds, and in this direction the spectators were not disappointed.

Several other T.T. machines were being tried out, among which D. A. Atkins's little 2¼ h.p. Hobart distinguished itself by winning the three events in which it was entered—a notable *début* for both rider and machine. R. Elliott's 3½ h.p. T.T. Rover was also among the first three in several events.

Tremendous Speeds.

A course of approximately half a mile had been fixed upon, the competitors being given a flying start. If the distance were correctly estimated, the speeds attained were in the neighbourhood of 60-65 m.p.h., for Hassall, who made fastest time of the day, covered the course in 27⅗s., equalling 65.2 m.p.h. The Norton riders did not compete in the sidecar classes, reserving their efforts for the solo events.



Owing to the drought, the hill was in a loose condition; and, as the organisers had planned not to keep the spectators waiting, competitors, following each other at half-minute intervals, were riding in a cloud of dust. After each event, Major Vernon Brook announced to the crowd the results in stentorious tones, and, as programmes had been well distributed, the interest in the place winners' times was most apparent.

The results were as follows:

A RECORD CROWD AND FINE RIDING AT STILE KOP.

An idea of the crowd that watched the climb may be gathered from this photograph, which also shows W. A. Fell Smith bringing his touring Rex sidecar up at an excellent pace.

Fastest time of the day! Although when the picture was taken neither Hassall (Norton) nor the spectators were certain of this, they felt that it was highly probable.

SIDECAR CLASSES.

550 c.c. (AMATEURS).—1, G. W. Ravenhall (3½ Rover sc.), 54⅘s.; 2, G. T. Baragwanath (3½ Sunbeam sc.), 54⅘s.; 3, H. C. Rhodes (3½ Sunbeam sc.), 58⅗s.

550 c.c. (OPEN).—1, T. C. de la Hay (3½ Sunbeam sc.), 37⅕s.; 2, R. Elliott (3½ Rover sc.), 49⅗s.; 3, G. J. Baragwanath (3½ Sunbeam sc.), 59⅗s.

750 c.c. (AMATEURS).—1, G. W. Ravenhall (3½ Rover sc.), 52⅗s.; 2, G. J. Baragwanath (3½ Sunbeam sc.), 56⅗s.; 3, W. Tongue (3½ Rover sc.), 59⅗s.

750 c.c. (OPEN).—1, T. C. Greenwood (4 Sunbeam sc.), 38⅘s.; 2, S. Wright (4½ Humber sc.), 52⅗s.; 3, G. J. Baragwanath (3½ Sunbeam sc.), 57⅗s.

1,000 c.c. (AMATEURS).—1, G. W. Ravenhall (3½ Rover sc.), 53⅗s.; 2, W. A. Fell-Smith (8 Rex sc.), 54s.; 3, G. W. Baragwanath (3½ Sunbeam), 61⅗s.

1,000 c.c. (OPEN).—1, T. C. de la Hay (3½ Sunbeam sc.), 38⅗s.; 2, T. C. Greenwood (4 Sunbeam sc.), 39⅗s.; 3, W. A. Fell-Smith (8 Rex sc.), 51⅕.

SOLO CLASSES.

275 c.c. (AMATEURS).—1, D. A. Atkin (2¼ Hobart), 45s.; 2, W. F. Smith (2¼ Hobart), 48s.; 3, A. W. Thrush (2¼ Levis), 48⅕s.

300 c.c. (AMATEURS).—1, D. A. Atkin (2¼ Hobart), 46s.; 2, W. F. Smith (2¼ Hobart), 46⅗s.; 3, A. W. Thrush (2¼ Levis), 47s.

350 c.c. (AMATEURS).—1, D. A. Atkin (2¼ Hobart), 45⅗s.; 2, J. N. Roberts (2¼ Levis) and W. F. Smith (2¼ Hobart) tied, 46⅗s.

350 c.c. (OPEN).—1, T. C. Greenwood (2¾ Sunbeam), 42⅕s.; 2, W. F. Smith (2¼ Hobart), 46⅗s.; 3, A. W. Thrush (2¼ Levis), 48s.

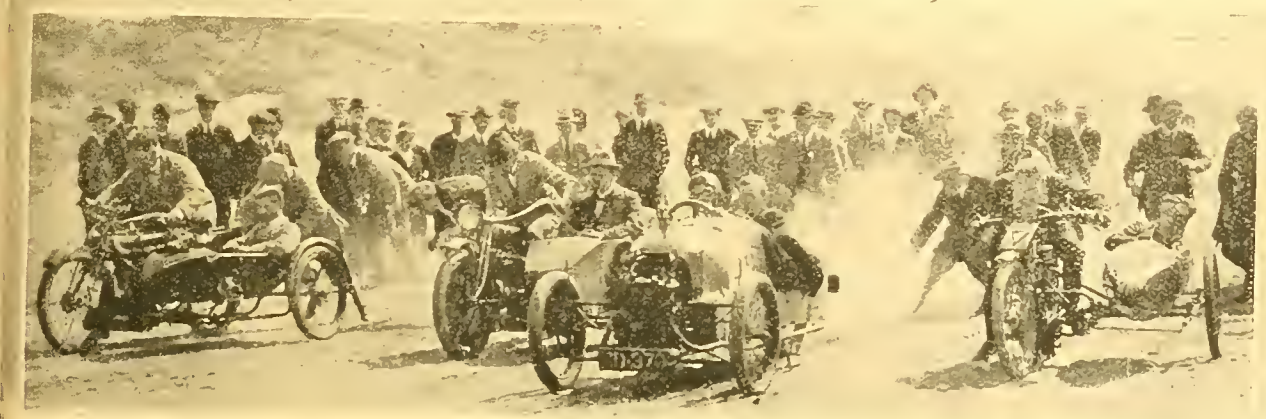
550 c.c. (AMATEURS).—1, B. Fidgeon (3½ Norton), 35s.; 2, J. E. J. Whitaker (3½ Norton), 36s.; 3, R. Elliott (3½ Rover), 36⅕s.

550 c.c. (OPEN).—1, H. W. Hassall (3½ Norton), 28⅕s.; 2, T. C. de la Hay (3½ Sunbeam), 28⅗s.; 3, R. Elliott (3½ Rover), 36⅗s.

750 c.c. (AMATEURS).—1, B. Fidgeon (3½ Norton), 34⅕s.; 2 R. Elliott (3½ Rover), 35⅗s.; 3, J. E. J. Whitaker (3½ Norton), 36s.

750 c.c. (OPEN).—1, H. W. Hassall (3½ Norton), 27⅗s.; 2, T. C. Greenwood (3½ Sunbeam), 30s.; 3, A. Elliott (3½ Sunbeam), 34⅖.

1,000 c.c. (AMATEURS).—1, B. Fidgeon (3½ Norton), 33⅘s.; 2, L. Crisp (4½ Humber) and J. E. J. Whitaker (3½ Norton) tied, 35⅗s.



1,000 c.c. (OPEN).—1, H. W. Hassall (3½ Norton), 27⅗s.; 2, T. C. de la Hay (3½ Sunbeam), 28⅗s.; 3, T. C. Greenwood (4 Sunbeam), 29⅗s.

SPEED TRIALS AT SOUTHPORT.

Low Gears an Advantage in Foreshore Racing.

THIS year the Southport speed trials were held on the foreshore instead of on the promenade as hitherto, and some very good racing was witnessed by the several thousands of spectators who lined the course last Saturday afternoon. Motor cycle police patrols were used to keep the "track" clear. The going was heavy, so the low-geared machines scored easily. Many last-minute entries rendered the printed programme almost useless, and a feature of the event was the number of youthful riders who competed. Southport apparently is a prolific nursery for future racing men.

Competitors returning in the centre of the course, to the start rather hampered the officials, but the programme was completed without a hitch. The results will be published next week.

A LIVELY SCENE ON THE SANDS.

Single and big twin sidecars and a three-wheeler at the start of the unlimited passenger class. From left to right: H. Reed (8 Dot sidecar), D. Barron (7-9 Indian sidecar), H. L. Hughes (8 Morgan), and A. Cowley (3½ Norton sidecar).

RELIABILITY TRIAL IN SOUTH BEDS.

LUTON and South Beds. A.C. had a reliability trial on Saturday over a course of between eighty and ninety miles. This included observed ascents of Sharpenhoe, Sundon (which had to be approached round a hairpin at the foot), Chaul End, and Studham Hills, the latter being in very bad condition. Competitors had to cover this circuit twice, and then do a non-stop section over new ground, including a watersplash and an observed ascent of Bradger's Hill. Few riders completed the two circuits, and only four finished. Provisional results: 1 (Club Cup), C. Dunham (4 Norton); 2, H. Reyre (5-6 James). Dunham's total error on the time schedule was 6m. 50s.

A Norton rider taking the second bend on Amulree in the Glasgow Western M.C.C. Inter-team Trial last Saturday. Observe the loose surface of the road.

THE F.I.C.M. IN AMERICA.

THE American motor cyclist organisation, the Motor Cycle and Allied Trades Association, which, to some extent, fulfils the position occupied by the Auto Cycle Union in this country, has realised that the rules of the Elgin road race must conform to the conditions imposed by the F.I.C.M.

Now, with regard to the international rules, the correspondent of one of the American motor cycle papers points out that the aim of the international body seems to be to race with touring machines on roads and to use stripped motor bicycles for track events only, and this, of course, is the case; but he seems to be greatly disturbed by the fact that the rule compelling the carrying of mudguards, stand, and two brakes will not meet with the approval of American riders. He concludes by saying, "In justice to American motor cyclists, it would be well to get an official ruling from the F.I.C.M. covering these points, for if fast times are made the winner should get his name on the world's record book, which will not occur if the F.I.C.M. regulations are not followed.

Larkhill and District M.C.C.

Mr. John Ireland, Linglea, Netherburn, has been selected as president, and Mr. W. R. Gold, 48, Harelashill, Larkhill, appointed secretary of a new club as above.

Worcester and District M.C.C.

At a Whit-Monday sports meeting at Worcester, undoubtedly the most attractive event, from the spectators' point of view, was a three-mile motor cycle race on the grass organised by the local motor cycle club. Results :

Heat 1.—F. Dayrell (2¼ Levis). Heat 2.—H. B. Taylor (3½ Triumph). Heat 3.—C. Eveson (3½ Norton). Heat 4.—E. Griffiths (3½ Norton). Heat 5.—H. Beach (3½ Enfield). Heat 6.—C. G. Horton (2¾ Wilkin). Semi-finals.—Heat 1 : 1, F. Dayrell, 4m. 53⅗s.; H. B. Taylor, 4m. 56s., fastest loser. Heat 2 : H. Beach, 4m. 56s. Final. —1, H. B. Taylor; 2, H. Beach; 3, F. Dayrell.

West Kent M.C.

A second hill-climbing event on the 14th inst. on Crockham Hill, near Westerham, resulted as follows :

350 c.c. (on Time).—1, A. E. Jessop (2¾ New Imperial), 40s.; 2, Simmons (2½ Levis), 46s.

500 c.c. (on Time).—1, E. L. Sharp (3½ Sunbeam), 30s.; 2, C. M. Bowen (3½ Norton), 30⅘s.

600 c.c. (on Time).—A. G. Williams (3½ Norton) and E. L. Sharp (3½ Sunbeam), 31s., tied for first place; 2, Bowen (3½ Norton), 32s.

UNLIMITED c.c. (on Time).—A. G. Williams (3½ Norton) and C. M. Bowen (3½ Norton), 30s., tied for first place; 2, E. L. Sharp (3½ Sunbeam), 31⅗s.

Eastbourne and District M.C.C.

There were sixty-nine individual entries and approximately 2,000 spectators at the recent inter-club hill climb.

300 c.c. SOLO.—1, G. F. Lazenby (2¾ Omega-Jap), 1m. 21s.; 2, J. C. Smith (2¼ New Hudson), 1m. 48s.; 3, W. J. Hylands (2¼ New Hudson), 1m. 50s.

500 c.c. SOLO.—A. Hewitt (3½ Sunbeam) and T. Swinnard (3 A.B.C.), 59s., tied for first place; E. Gorringe (3½ Sunbeam) and C. Volk (3½ Sunbeam), 1m. 1s., tied for second place.

UNLIMITED SOLO.—1, A. Hewitt (3½ Sunbeam), 56s.; 2, L. Watts (4 Triumph), 57s.; C. Rice (6 Zenith) and T. Swinnard (3 A.B.C.), 57½s., tied for third place.

600 c.c. SIDECAR.—1, H. D. Dodson (3½ Norton sc.), 1m. 17s.; 2, L. S. Watts (4 Triumph sc.), 1m. 19s.; 3, W. Collins (4 Triumph sc.), 1m. 23½s.

UNLIMITED SIDECAR.—1, S. Dunford (7-9 Harley-Davidson sc.), 1m. 3s.; 2, E. A. Firrell (7-9 Harley-Davidson sc.), 1m. 8½s.; 3, D. D. Dobson (3½ Norton sc.), 1m. 12s.

CYCLE CARS.—1, F. H. Chrimes (G.N., 1m. 8s.; 2, J. Sawford (8 A.V.), 1m. 12s.; 3, L. Humphries (G.N.), 1m. 16s.

GOLD MEDAL FOR FASTEST TIME OF THE DAY.—A. Hewitt (3½ Sunbeam).

SILVER CUP FOR BEST FORMULA PERFORMANCE.—F. H. Chrimes (G.N.).

Mid-Cornwall M.C.C.

Somewhat contrary to usual practice, a committee of motor cyclists in the neighbourhood of St. Austell is arranging a hill-climb for June 4th at Hollicoombe Hill, near Bodmin, at which event it is hoped to form a club, as above. Those interested should communicate with Mr. Gordon Williams at the Y.M.C.A., St. Austell.

Week-end Club Events.

May 28.—Sutton Coldfield and North Birmingham A.C. Reliability Trial.
May 28.—N.E.A.A. Gymkhana.
May 28.—Edinburgh and District M.C. Dobson Trophy Trial.
May 28.—Surbiton and District M.C.C. Mellano Cup Trial.
May 28.—North London M.C.C. Paperchase.
May 28.—North-west London M.C.C. Club Run to Woburn.
May 28.—Public Schools M.C.C. and Wallington and District M.C.C. Inter-club Hill-climb.
May 28.—Plymouth and District M.C. and L.C.C. Gymkhana.
May 28.—Essex County and Southend A.C. Hill-climb.
May 28.—Yorkshire Centre A.C.U. Hill-climb.
May 28.—Central London M.C.C. Club Run to Burnham Beeches.
May 28.—Northern M.C. Club Run to Roman Wall and Northumberland Lakes.
May 28.—Oxford M.C. and Banbury M.C.C. Inter-club Hill-climb.
May 28.—Helensburgh M.C.C. Reliability Trial.
May 28.—Luton and South Beds. A.C. Ladies' Day.
May 28.—Reigate, Redhill, and District M.C.C. Hill-climb.
May 28.—Dewsbury and District M.C.C. Competition.
May 28.—North Wales M.C.C. Picnic.
May 28.—Kidderminster M.C.C. Hill-climb.
May 28.—Bristol M.C.C. King Cup Reliability Trial.
May 28.—Ivy M.C.C. (Wolverhampton). Club Run Bradley.
May 28.—Macclesfield and District M.C. Reliability Trial.
May 29.—Halifax and District M.C.C. Club Run to Chester.
May 29.—Leeds M.U. Inter-club Run.
May 29.—Wakefield and District M.C.C. Club Run to Rievaulx Abbey.
May 29.—Coventry Triangle M.C. Club Run to Malvern.
May 29.—Barrow and District M.C. Speed Trials.
May 29.—Barnsley and District M.C.C. Club Run to Chester.
May 29.—Middlesbrough and District M.C. Reliability Trial.
May 29.—North Cheshire M.C.C. Reliability Trial.
May 29.—Plymouth and District M.C. and L.C.C. Club Run to Dartmeet.
May 29.—Doncaster and District M.C.C. Club Run to Harrogate.
May 29.—Exeter M.C. and J.C.C. Club Run to Dartmeet.
May 29.—Sheffield M.C.C. Club Run to Bolsover and Hardwick.
May 29.—Burton and District M.C.C. Club Run to Ashover.
May 29.—Leeds and District M.C. Club Run to Sutton Bank.
May 29.—Central London M.C.C. Club Run to Sevenoaks.
May 29.—Holwood M.C.C. Club Run to Titsey.
May 29.—Rochester, Chatham, and District M.C. and L.C.C. Club Run to Perry Wood.
May 29.—Brighton and Hove M.C.C. Hill-climb.
May 29.—Portsmouth and District M.C. and L.C.C. Club Run to South Harting.
May 29.—Woolwich, Plumstead, and District M.C. Club Run to Toys Hill.
May 29.—Berwick and District M.C. Reliability Trial.
May 29.—Amersham and District M.C.C. Speed Judging Contest.
May 31.—Ealing and District M.C.C. Evening Reliability Trial.
June 1.—York and District M.C. Garrowby Hill-climb.

A Section devoted to Club Announcements will be found on Supp. xliii.

University College of N. Wales M.C.C.

This newly-formed club held its first event on a recent Wednesday, when some dozen members took part in a most enjoyable half-day trial. The course, in all about seventy miles, included two good specimens of Welsh hills and several miles of tortuous byroads. Results :

	Total Error.
1. M. Griffiths (3½ Sunbeam)	... 3m.
2. R. S. Owen (3½ Triumph)	... 3¼m.
3. H. I. Jones (2¼ Triumph)	... 7¾m.

R. E. ORICE'S SPECIAL PRIZE FOR BEST PERFORMANCE ON OBSERVED HILL.—Norman Jones (4 Triumph).

North-west London M.C.C.

On Saturday, June 4th, the annual London-Coventry-London Trial will take place with the Lawrence Challenge Cup as premier award. Specially reduced fees are offered to new members, who must be amateurs, joining for this event.

Macclesfield and District M.C.

Results are appended of the recent fuel consumption test held on the Buxton road :

CLASS 1 (350 c.c. Solo).—J. Hopwood (2¾ Verus-Blackburne), 67.2 m.p.g.

CLASS 2 (Unlimited Solo).—A. Lomas (3½ Triumph), 65.6 m.p.g.

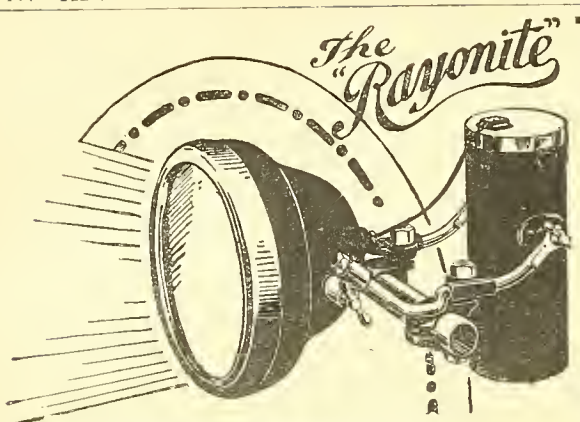
BRICO
TRADE MARK

Stop the Waste—

Waste expenditure in anything is sheer madness when it can be stopped. Stop the waste in your engine by fitting BRICO Piston Rings, stop the waste of compression, oil, petrol, and money due to leaky piston rings—FIT BRICO.



BRICO Rings in your engine mean money in your pocket because they are made of the highest grade of iron adopted as a standard for Aircraft Piston Rings, iron having high tensile, high elasticity, minimum permanent set, and great durability under working heat—iron that is exhaustively tested in both raw and finished state. Best also because BRICO Rings are perfectly round and are tested to .0001 of an inch divergence before going into stock, so accurate that perfect compression is ensured. They are the perfected production of specialisation and standardisation—so good, that improvement is impossible.

To obtain maximum generation of power a new set of BRICO Rings should be fitted once a year—that is a rule that results in economy.

There's a BRICO Ring for every Engine
in stock at all Dealers, Agents, and Garages.
FIT BRICOS NOW.

Don't just ask for a Piston Ring — *Ask for a BRICO and get the BEST*

THE BRITISH PISTON RING CO., LTD., COVENTRY

The "Rayonite"

SELF-CONTAINED MOTOR CYCLE ELECTRIC HEAD LAMP.

British Made.

A Great "Volex" Achievement.

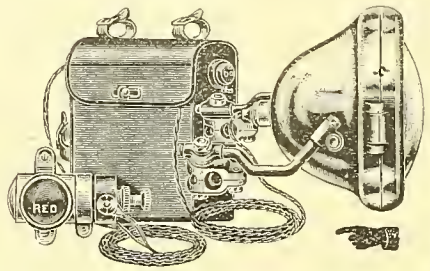
Recommended for home and export.

No accumulator, oil, or acid required; a brilliant light obtained at will. The convenience of this self-contained set cannot be over-estimated; the pleasure of having a lamp always ready for use without preparation will be appreciated. A successful self-contained motor cycle lamp such as the "Rayonite" is only rendered possible by the remarkable efficiency of the "Volex" Dry Battery, which is in a class apart from all other Primary Batteries. Comprising "Superba" Headlamp, 5½" front, combined with a strong metal container holding the "Rayonite" Dry Battery, complete with bulb. No. M/1. Price **£4 4 0** Ditto with "Superba de Luxe" Headlamp (7" front) **£4 17 6.** *Spare "Rayonite" Batteries, 10/6*

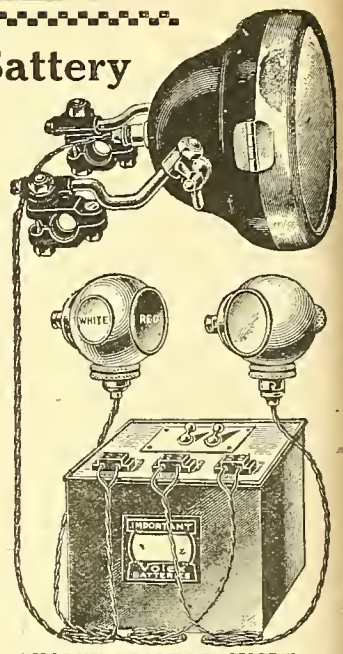
"Volex" Dry Battery

Motor Cycle and Sidecar

LIGHTING OUTFITS.



Best British Manufacture.



No other battery outfit will give results equal to the "Volex."

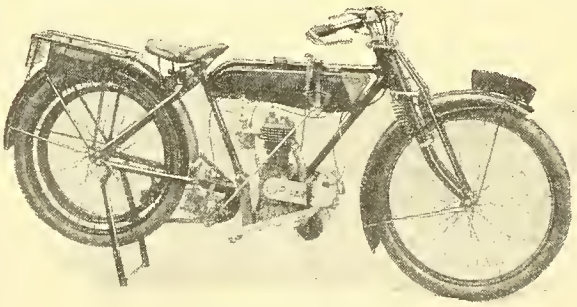
Volex Dry Battery Lighting Sets are the ideal no-trouble outfits. In satisfactory service for over 10 years with a constantly increasing demand due to their Reliability, Convenience, and Economy in use.

This set gives lasting and effective service without attention.

SPECIFICATION—6 volt "Volex" Dry Batteries in metal container, Switchboard, Superba Headlamp (5½" front), Side and Tail Lamps, Cord and Bulbs. No. Mc/490, as illustrated, price **£8 8 0** A high-grade, handsome, and reliable outfit. Also supplied with Superba de luxe Headlamp. 7" front, No. Mc/450, price **£9 9 0.**

"VOLEX" MOTOR CYCLE

SOLO LIGHTING SETS



The most efficient Dry Battery Solo Sets produced. Made upon the same principle as our "Volex" Combination sets. Headlamp is provided with 6 volt bulb giving an exceptionally brilliant light, and ample light is provided in the rear lamp.

MISCELLANEOUS ADVERTISEMENTS.

PRICES.

ADVERTISEMENTS in these columns —First 12 words 3/–, and 3d. for every additional word. Paragraphs of under 8 words are charged double rate. Each paragraph is charged separately. Name and address must be counted. Series discounts, conditions, and special terms to regular trade advertisers will be quoted on application.

Postal Orders and Cheques sent in payment for advertisements should be made payable & Co. to ILIFFE & SONS Ltd., and crossed & Co. Treasury Notes, being untraceable if lost in transit, should not be sent as remittances.

All advertisements in this section should be accompanied with remittance, and be addressed to the offices of "The Motor Cycle," 20, Tudor Street, London, E.C.4, or 19, Hertford Street, Coventry. To ensure insertion letters should be posted in time to reach the offices of "The Motor Cycle," by the first post on Friday morning previous to the day of issue.

All letters relating to advertisements should quote the number which is printed at the end of each advertisement, and the date of the issue in which it appeared.

The proprietors are not responsible for clerical or printers' errors, although every care is taken to avoid mistakes.

NUMBERED ADDRESSES.

For the convenience of advertisers, letters may be addressed to numbers at "The Motor Cycle" Office. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charge, which must include the words Box 000, c/o "The Motor Cycle." Only the number will appear in the advertisement. All replies should be addressed No. 000, c/o "Motor Cycle," 20, Tudor Street, E.C.4. *Replies to Box Number advertisements containing remittances should be sent by registered post, but in all such cases it is advisable to make use of the Deposit System.*

In the case of motor cycles offered for sale under a box number, as it is unusual for these to be sold without first being inspected by the intending purchaser, advertisers will facilitate business by embodying in their advertisements some mention of the district in which the machine offered may be seen and tried.

DEPOSIT SYSTEM.

Persons who hesitate to send money to unknown persons may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Motor Cycle," both parties are advised of this receipt.

The time allowed for a decision after receipt of the goods is three days, and if a sale is effected we remit the amount to the seller, but, if not, we return the amount to the depositor, and each party to the transaction pays carriage one way. For all transactions up to £10, a deposit fee of 1/- is charged; on transactions over £10 and under £50, the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6; and on all transactions over £100, 1 %. All deposit matters are dealt with at 20, Tudor Street, London, E.C.4, and cheques and money orders should be made payable to Iliffe & Sons Limited.

The letter "D" at the end of an advertisement is an indication that the advertiser is willing to avail himself of the Deposit System. Other advertisers may be equally desirous, but have not advised us to that effect.

SPECIAL NOTE.

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post.

WE DON'T SPECULATE— WE CALCULATE

Does your Tyre Repair Man calculate to your advantage?
When your cover or tube comes to us we immediately calculate the cost of repair, and, if we are not CERTAIN that it will pay YOU for the amount you are asked to spend, WE TELL YOU SO FRANKLY. That is our policy.

RETREADING.

26 x 2	.. 20/-	26 x 2½	.. 22/-
26 x 2¼	.. 20/-	26 x 3	.. 25/-
26 x 2⅜	.. 21/-	28 x 3	.. 30/-

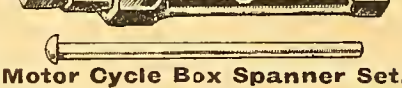
Note—The old tread is completely stripped off and new rubber built up just as in a new cover. We do not fit a ready cured band.

REPAIRS.

We execute all cover and tube repairs. No job is too small or too large, provided the article is worth the cost.

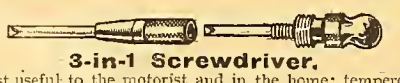
New Butts fitted ..	6/- pair
New Section fitted ..	3/- ,,
New Valves and Seats	2/6 ,,

On receipt of article we immediately send you full report and estimate. We pay return carriage. Terms: CASH AGAINST PRO FORMA.



ACCESSORIES.

We stock every accessory and tool for either car or motor cycle. Send for our list, or let us quote you for your requirements.



WE ARE THE

CHEAPEST HOUSE IN THE TRADE

PHILIPSON'S

PATENT AUTOMATIC GOVERNOR

PULLEY

AND GEAR COMBINED

Don't Scrap an old Engine,

but give it a

NEW LEASE OF LIFE

by fitting the

World-famed Philipson Pulley.

Entirely Free from troublesome and weighty complications—only two working parts—no levers, rods, wheels, etc., to worry about. Simply takes the place of the ordinary pulley. One nut secures the complete gear to the engine. Can be fitted without any alterations to most direct belt-driven engines in a few minutes.

For hill-climbing it is unsurpassed. Makes mountaineering easy.

IMMEDIATE DELIVERY.

Send for Illustrated Booklet.

During the past few weeks the following machines have been fitted with PHILIPSON Pulley:

Triumph,	Arno
Rover,	Rex,
Norton,	B.S.A.,
Douglas,	James,

Novelty in the T.T.

IN this issue are described two entirely new machines, which have been produced for the 1921 Tourist Trophy races by firms which did not compete last year.

One is a combination of a world-famous works and one of the best-known authorities on high-speed internal combustion engines. It is true that its *début* in the Isle of Man is something in the nature of a trial run, but this is purely on account of the fact that there has been no time for further development. Indeed, it is a tribute to the design that an engine which first saw the light of day but little over a month ago should have inspired such confidence in the manufacturers as to be entered for the classic road race.

The second machine also bears a name historic in the annals of the motor cycle movement, and is the considered development of a design more than a year old. Both frame and engine are unconventional, and the machine has been designed to suit the requirements of the Isle of Man course.

It is noticeable that almost every feature which has been incorporated in T.T. mounts *is a direct improvement from the tourist's point of view.*

It is true that the tourist does not require to travel at such high speeds as those attained in the Isle of Man, but he does require comfort, ease of control, quick acceleration, and good braking. All these features are essential to winning the Tourist Trophy. In addition to the two machines to which reference has been made, and which mark a new epoch in motor cycle development, there is evidence amongst other entrants of a distinct advance along sound mechanical lines. Machines which were entered in the 1920 event have been developed still further, and in most cases have been lightened as a whole, and particularly as to reciprocating weight.

Newcomers are generally inclined to be daring, but, so far, we have discovered no single development of importance which will be without a happy influence on touring machines. There will be some who consider that the evergrowing popularity of overhead valve gear is a mistaken policy adopted purely for speed purposes. We cannot agree, since as engine efficiency is increased so will fuel consumption and overall weight be decreased. In certain cases we find Tourist Trophy machines fitted with two-speed gears. Is this a retrograde movement? We think not, although we do not suggest that three speeds are unnecessary for touring mounts; rather it is a proof that the latest engines possess improved flexibility.

There may be manufacturers who fail to apply the lessons learned in the Isle of Man to their standard productions, but such concerns are becoming increasingly scarce, and surely they will reap their own reward.

Why Not an Isle of Man Racing Week?

IF the R.A.C. and the A.C.U. combined their efforts what a splendid Isle of Man week could be organised in 1922! The parent body has announced its intention to organise races for two classes of cars next year; such events, combined with the Junior and Senior motor cycle events, would evoke the enthusiasm of all classes of motorists. Much money, considerable time and work in the organisation would be saved if the two bodies worked together. The only obstacle which suggests itself is that it might be difficult to persuade the Isle of Man authorities to close the roads for four days in one week.

However, there is plenty of time in which the matter could be discussed and obstacles overcome. It is sincerely to be hoped that, when the time comes, the leading motor car and leading motor cycle associations will work together and provide a really sporting week in the I.O.M. There are plenty of motor cyclists who would like to witness the car races, and quite an equal number of motorists who are anxious to see the motor cycle races.

An index to the advert s ments in this issue will be found on the page facing the back cover.

Yes, Really.

AFTER a prolonged period during which benzole was about as scarce as decent beer in war time, my local supply man approached me with a furtive air, and a sombrero pushed well down over his forehead. He whispered, "Any use for a fifty-gallon drum of benzole?" "Good stuff?" I queried. "Rather!" he responded emphatically. So I bought. It has now arrived. On the drum is stencilled in large letters "Anglo-American Oil Co." I have no quarrel with the quality of the benzole, which is top-hole juice. But what a game it is. It seems only yesterday that we were assured by Parliament and by a certain section of the press that British benzole was to be our mighty ally in pulling down petrol prices. I shall commence drilling for oil in my back garden.

Road Perils.

THE railways being largely out of action, we all took to the roads at Whitsuntide, and our national highways were about as safe as Orvillers in June, 1916. Let us, dear readers, compare notions, and recognise wherein the peril consisted? Was it gilded nuts on high-powered sports 'buses? Was it motor coaches? Well, I spent some of the windiest hours of my nervous young life, and I find no fault with either of the above. I rank the real perils of the road in the following order:

1. Cyclists.
2. Low-powered sidecar outfits.
3. Closed cars (especially taxis).

To Justify.

THE above catalogue requires a little explanation. Most of my mileage was covered on famous main roads. As a rule these roads were just wide enough to accommodate the usual twin procession of cars travelling in opposite directions. All the potential perils arose from *overtaking*. On each side of the road, close to the kerb, there was a string of cyclists, riding sometimes two abreast, but often three or four alongside. Their presence absolutely vitiated the basic principle on which the width of the road had been originally plotted, for they made the road centre an uncommonly tight fit for the twin streams of cars. Overtaking of cars by cars was almost universally due to the obstacle caused by a vehicle of lower pace than the average, and in nine cases out of ten that slow vehicle was a low-powered sidecar outfit. Finally, the chief mishaps caused by cars overtaking cars were ascribable to vehicles with projecting tops, which blanketed the vision of the drivers next behind; and the chief offenders were the slow taxis, for a 40 h.p. limousine did not ordinarily allow itself to be overtaken.

Without Malice.

THE last paragraph is written without any bias against cyclists, low-powered sidecars, and taxi-cabs. All of them have obviously as much right to the roads as anybody else. But I was profoundly impressed with the urgent necessity for widening sundry roads which are usually regarded as satisfactory. If so much pressure can arise in these days when hardly anybody can afford to motor, what will be the state of our highways in ten years' time, when our national prosperity has bucked up again, and we emulate the famous State of Ohio, where one person in every seven owns a car? Road authorities must not rashly decide that a 30ft. roadway is good enough for modern traffic.

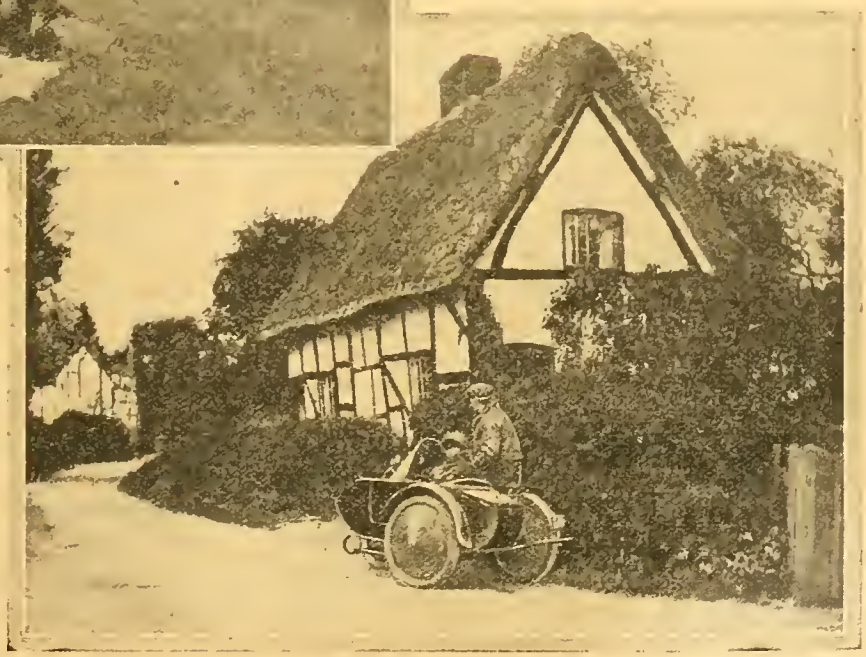
Battery Boxes.

BEHIND the scenes I am conducting a little useful propaganda work with the firms who manufacture electric lighting outfits. I have at last coaxed two concerns to modify their battery cases in such wise that one may remove the lid without breaking most of the connections. No credit to me. The principle is simply that of the common or garden flash lamp, in which spring metal tongues make automatic contact with the necessary terminals. By another mighty brainwave a colleague induced some of these gentry to drill small holes in the off side of their tail

Occasional Comments.—

lamp bodies, so that one need not remain in ignorance of a dud bulb until the moment of arrest. From which experience I deduce that the design of a motor cycle or a motor cycle gadget is a job demanding a trinity. No. 1 should guarantee that the job is technically sound, and will work. No. 2 should boil the article down to a form in which economical production is practicable. No. 3 should know nothing about technics or manufacture; he should be an ordinary thick-headed user, like myself, with a knack of taking things to pieces as often as possible, and putting them back wrong.

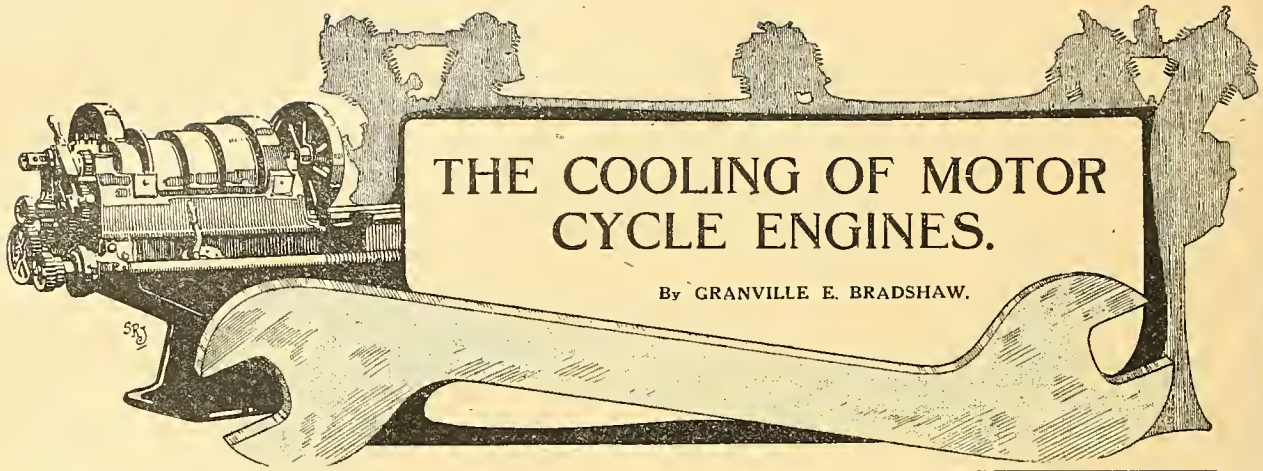
Impulse Starter Magnetos.



CORRESPONDENCE indicates that a few slim fairies and corpulent paterfamili—(what *is* the plural of this beastly word?)—asses own cycle cars which have induced them to become mightily interested in any gadget which substitutes mechanical ingenuity for brute strength in starting engines. So I beg to announce that most of the impulse starter devices can easily be mounted on ordinary magnetos, and that there is no need to buy a complete new instrument. I notice that in some cases the device is keyed to the armature spindle; and riders meditating a conversion might do well to consult the manufacturer of their magneto as to whether the instrument should be returned to the works to have a keyway cut in the spindle. Some authorities say that the key is merely added to simplify timing: others hold that its presence is a precaution against the slipping of a friction drive.

A Chance for Repairers?

LIKE many other innocent spendthrifts, I was deeply fascinated last autumn by the various lever-operated flashlamps, which dispense with batteries. Quoth I to myself, quoth I, "No more dismantling magnetos by the roadside in darkness, rationing out the last three matches over the job." I have carried one of these lamps ever since. Quite recently, when I was endeavouring to clear a carburetter jet about 2 a.m., the lamp developed a worn pawl, or words to that effect. Next day I met the only local repairer whom I ever permit to touch my buses. I consulted him. Should I take the lever lamp to bits, and try to fake it up? "Don't!" he implored me. "I took one to bits in my shop the other day. When the case came off, it behaved like a Mills grenade. It's got a scatter-spring inside it, about 50 h.p., and my staff are still raking over the garage litter in their spare time trying to find the missing bits."



I find the repairers are rather slack just now, and a lot of us have got some of these lamps which have lost some of their original candle-power. Better still, will somebody write us a useful hint and tip for reconditioning these very handy little accessories? They are just the goods for night riders.

SISTER PASTIMES—
MOTOR CYCLING, FISHING, AND PHOTOGRAPHY.

These two attractive pictures secured the ten-guinea first prize and the five-guinea second prize respectively in the recent photographic competition organised by Mr L. B. Henderson, of Sheffield, for owners of Henderson sidecars. The view on the left secured the first prize for C. W. Knight, Bexley, while the second prize photograph (reproduced on the right) is by H. T. Pollit, of Bromsgrove.

THE COOLING OF MOTOR CYCLE ENGINES.

By GRANVILLE E. BRADSHAW.

In last week's instalment our contributor emphasised the simplicity of air-cooling in relation to water-cooling. He proceeded to point out the advantages of certain arrangements of cooling fins and valve disposition. In the succeeding notes it is urged that engines have suffered in the past from lack of proper precautions for cooling the crank case and, incidentally, the lubricant therein.

(Concluded from page 637.)

AN interesting point that came to the writer's notice was the importance of cooling the crank case, and he first recognised this in 1915 in connection with some small engines that were designed by him for the purpose of driving wireless and searchlight dynamos.

As first designed the engine and dynamo were both bolted to a bedplate, and an ordinary fan (similar to an office desk fan) was carried on the crankshaft blowing air towards the engine generally.

This fan was not sufficiently large in diameter to reach nearer than to within three inches of the cylinder heads, and a certain amount of chance had to be taken, as it was impossible to increase the general dimensions for this purpose. The whole unit, however, ran extremely well, and on its first test it did fifteen hours per day for ten consecutive days on continuous full throttle.

Several months later the writer decided to make a really compact unit almost wholly enclosed, and an enclosed centrifugal blower was used which did not blow on to the crank case at all, but which directed the air through ducts right on to the cylinder heads.

Effects of Crank Case Heat.

The result was astonishing---the engines would not develop the same power, nor would they perform satisfactorily for long periods. The crank case became so hot that it melted the insulation in the magnetos, and the system had to be discarded.

This proved conclusively that a great amount of the cooling of an engine is done by the crank case and the circulation of the oil.

Later experiments confirmed this, and subsequently it was proved by Dr. Gibson at Farnborough to what extent the crank case and circulation effected cooling.

In his excellent paper (which really ought to have been taken most seriously by the motor cycle designer, as it probably constitutes the greatest fund of information that air-cooling has ever received) he remarks, "From these figures it appears that of the total heat dissipated from these cylinders only 53% in test No. 9 and 60% in test No. 10 are actually removed from the cooling surface of the cylinder itself. The remainder ranging from 47% to 40% . . . . . is dissipated from the surface of the crank case. . . ."

One can no longer wonder that "Brooklands" speedmen are continuously pumping oil into their engines. It has frequently been stated that they are more oil-cooled than air-cooled, and strangely enough experiments have shown that even water-cooled engines benefit to very nearly the same extent from oil-cooling.

This promptly brings out a handicap which the air-cooled engine has unknowingly suffered for many years, *i.e.*, whilst the water-cooled car engine has almost invariably been provided with a large crank case, a large oil sump and a constant circulation of a large quantity of oil, the air-cooled engine has a diminutive crank case and drops of oil at about sixty per minute.

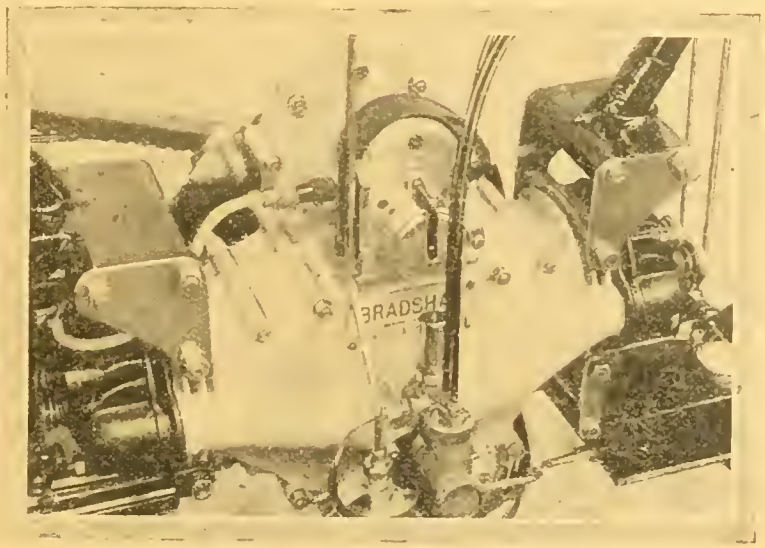
The car engine has been lucky because it certainly was not fitted with this sump and circulation lubrication for the purpose of assisting in the cooling of the engine, although it has unconsciously played nearly as much part in the cooling as has the radiator. The principal object was, of course, to remove all need for attention, and it now appears that the air-cooled engine can benefit very considerably from scientifically adopting car type lubrication.

We have been asked for years, "Why do we stick to drip-feed lubrication?" and truly it is difficult to answer. In the light of the double service that oil circulation renders we are almost compelled to adopt it.

Utilising Oil Circulation.

The next point that occurred to the writer was how can we get the most out of this crank case cooling of which we have up till now failed to realise the value?

If it does roughly half our cooling without our even designing for it, how much more can it do in the case of an engine designed from this point of view?



In an engine test observed by the writer the removal of all the fins from the barrel made a difference of only about 12% in the cooling of the engine, but a variation of the quantity of oil that was allowed to splash *inside* the cylinder walls and against the head of the piston made as much as 60% difference to the

The Cooling of Motor Cycle Engines.—

temperature of the cylinder barrels. Later he tried splashing oil on to the outside of the barrels as well (by placing the cylinder completely inside the crank case and circulating oil exactly as in car practice), and the completed results have more than justified the investigations he has made in the past and which have led him to this type of cooling.

Analysing the three items that have to be cooled we have the cylinder head, cylinder barrel, and the piston. The cylinder head for the time being must be cooled in much the same way as at present, plus a little extra care in valve disposition and in exposing the centre of the head as much as possible. The piston (roughly one-third of the combustion area) has always been cooled principally by the oil, and greater care should be given to its design with this object in view.

Both the cylinder head and the piston are, of course, in direct contact with the burning charge throughout the whole of the explosion stroke, whereas the cylinder barrel is half covered and uncovered, therefore it is by no means the difficult problem that might at first be anticipated.

The Bradshaw "oil-cooled" engine, the outcome of the investigations of the author.

Tests on the oil-cooling of the barrel have certainly shown that whilst under very heavy duty the ordinary air-cooled cylinder (when polished for observation purposes) will turn a straw colour and sometimes from that to blue, the oil-cooled cylinder shows no sign whatever of such temperature, however badly treated.

It can here be noted with interest that those engines which are fitted with a baffle to prevent much oil reaching the piston and cylinder walls are deliberately handicapping the cooling of both. The writer has covered many thousands of miles on a car of very high repute so fitted, and the carbon that accumulated on the underside of the piston head within 3,000 miles was sometimes as much as a quarter of an inch, and quite twice as much as on the combustion side of the head.

Carbon under the Piston Head.

Carbon under a piston head can only denote an excessively hot head, and this lowers the efficiency. Similarly, if the oil is made hot enough to turn a considerable quantity of it into carbon there must be a great deal of it brought to a temperature very nearly as high as this, which high temperature must very seriously affect the lubricating properties of this oil. The writer has found that a very large quantity of oil constantly thrown against the underside of the piston will not only keep the carbon away from this surface but from the top of the piston as well, and compared with the usual difficulties of adequately cooling a piston crown, the cooling of a cylinder barrel is simple.

This point of piston cooling naturally brings up the question of pistons in aluminium alloy or cast iron, but it is an item in itself that is long enough to preclude the possibility of investigation here. All that can be said is that Dr. Gibson found that with an aluminium piston of normal design the temperature of the head was between 360° and 450° F., whilst under similar conditions the corresponding cast iron reached a temperature approximately twice as high. It was also found that a piston having a full skirt is very much preferable to one of the slipper type.

Side-by-side Valves Require More Cooling.

From the same source of information as that referred to above, we find that a cast iron cylinder with orthodox side valves requires as much as 30% more cooling surface than does one with overhead valves. Fortunately, however, a cylinder of this type is able to accommodate this amount of increased surface.

In conclusion, the writer submits that in improved design, as regards the cooling by oil of the internal parts of a motor cycle engine, we have an opportunity of considerably greater advancement than the motor cycle engine has enjoyed for many years. He submits, also, that instead of having cooling fins on the cylinder it is preferable in the absence of a well-directed current of air between and through them to pick up this heat by means of the oil, and to spread it all over the flat and very much increased surface of the crank case, and constantly to circulate comparatively cool oil throughout the engine by an ordinary gear pump as in car practice, instead of depending upon a few drops of scorched oil for lubrication.

In an oil-cooled engine of the writer's design, an inspection of the oil after more than an hour all out on Brooklands track has shown this to be quite clear, and almost as when filled up, whereas the ordinary engine with the ordinary hand pump or drip feed shows surplus oil almost like treacle.

Incidentally, it might be mentioned that the maximum temperature the oil ever reached in the oil-cooled engine above referred to was not more than 180° F., and with simple modifications to the oil container it was possible to bring this temperature down to as low as 130° F.

A natural conclusion to be arrived at in connection with the increasing in area of the crank case is the

The Cooling of Motor Cycle Engines.—

inclusion of the gear box and all other details, thereby greatly increasing the cooling surface and avoiding the noisy external bicycle chain; and the writer hopes very shortly to have such an engine on the test bench, on which it is intended to carry out most careful temperature investigations.

Further advancements that naturally arise are the rounding off of all sharp corners and the removal of recesses and crevices, which so rapidly accumulate mud and dust. In fact, the engine can be made up as a suitably-shaped aluminium box, completely smooth externally, with everything (including the valve gear springs, etc., in the case of a side valve engine) running in oil inside. This greatly minimises the necessity of the engine having to be placed so as to enable the air to pass through cooling fins.

Many will question the possibility of preventing this copious lubrication allowing oil to pass the piston rings, but as it is very little more than that used in a car engine, it has so far shown no difficulty.

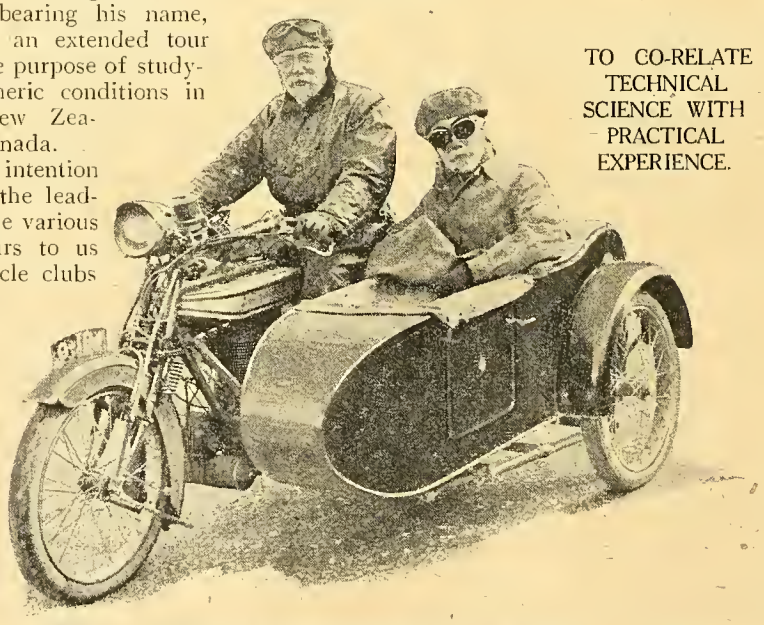
Finally, and by no means the last advantage to be derived from the inclusion of the cylinder in the crank case, is the complete deadening of the metallic clatter that usually emanates from the valve gear in a resonant air-cooled cylinder.

As already mentioned, the water-cooled cylinder is deadened whilst the air-cooled one has a distinct "ring," but the bolting down of the cylinder by its head directly on to the crank case and leaving the barrel free inside has quite as much deadening effect as has the water and water-jacket, and places the oil-cooled engine in a position to compete with water-cooled engines from the point of view of silence.

TO OBTAIN FIRST-HAND KNOWLEDGE.

Projected Overseas Tour by Prominent British Designer.

OFTEN overseas motor cyclists have suggested to us that the designers of British motor cycles should visit the countries in which their machines are used in order to obtain first-hand knowledge of prevailing conditions.



Mr. J. L. Norton, M.I.A.E., managing director of Norton Motors, Ltd., and designer of the well-known machine bearing his name, has decided to make an extended tour later in the year for the purpose of studying road and atmospheric conditions in Africa, Australia, New Zealand, U.S.A., and Canada.

It is Mr. Norton's intention to obtain opinions of the leading motor cyclists in the various countries, and it occurs to us that overseas motor cycle clubs may care to avail themselves of the opportunity to meet the Norton designer and to arrange informal discussions on matters of speed, tune, design, equipment, riding conditions, and, in fact, any subject of mutual interest.

As is well known to our readers, *The Motor Cycle* has always encouraged the interchange of ideas between overseas riders and the movement in this country, and we have prevailed upon Mr. Norton to reserve a certain amount of his time for this purpose.

We invite club secretaries in the countries named to communicate with us, or with Mr. Norton (at the Norton Works, Bracebridge Street, Birmingham), in order that any such proposed meetings may be included in his programme. To assist them in this direction we give below the suggested itinerary, with approximate dates:

End of September.—Departure from England.
First two weeks in November.—Durban and Pietermaritzburg.
Second two weeks in November.—Pretoria, Johannesburg, Bloemfontein, East London, Port Elizabeth, and Cape Town.
First week in December. — Departure from Africa.
December 20th (approx.). — Arrival at Adelaide.
January.—Melbourne, Sydney, and Perth.
End of January.—Departure for Auckland and Wellington.
February. — Christchurch and Dunedin.
March. — Departure for U.S.A.
April.—In U.S.A. and Canada.

TO CO-RELATE TECHNICAL SCIENCE WITH PRACTICAL EXPERIENCE.

Mr. J. L. Norton, who is shortly departing for a tour overseas. In the sidecar is Mr. Norton, sen.

We feel sure that a hearty welcome will be extended to this prominent rider by motor cyclists overseas, as his reputation is as well known abroad as it is in this country, and we anticipate that he will receive so many invitations that he will experience difficulty in fitting them in with a programme determined by the steamer sailings. For this reason we recommend that those clubs which desire to meet Mr. Norton should lose no time in "booking a date."

Mr. Norton will take with him a 4 h.p. outfit. Later on, it is the Norton designer's intention to make a similar trip to India and other eastern countries where motor cycles are used.

T.T. NOTES AND NEWS.

Daily Steamer Service. Visitors' Machines must Comply with the Law.

PRACTISING started at dawn on Tuesday morning last. A goodly number of riders are already on the Island.

* * * * * *

A. E. Wood and H. Poole will be reserve riders for the B.S.A.'s. The B.S.A. racing colours will be green and cream.

* * * * * *

The Ivy stable will be in the charge of H. C. Newman, the well-known pre-war speedman. Howard Newman obtained third position in the 1913 Junior race on an Ivy.

* * * * * *

Last year Douglas Alexander in the Senior race used a small handle-bar screen on his Indian Scout to protect his face from small stones and grit thrown up by other riders. Since that time Easting Windscreens, Ltd., have developed a miniature screen of similar type specially for racing machines. The screen is quite small—about 9 × 6in.—is bound in leather cloth, and is fitted with strong clips to bolt on to the handle-bar. Riders should apply for one of these for practising, and, if desired, a new one will be supplied for the race. The address of Easting Windscreens, Ltd., is 132, Steelhouse Lane, Birmingham.

* * * * * *

As mentioned in last week's issue, thanks to the efforts of the Auto-Cycle Union there is now no doubt that there will be a daily boat service between Liverpool and Douglas for the T.T. practising and races. The idea was prevalent that the Government, through the Ministry of Transport, would only permit sailings on alternate days. The A.C.U. brought pressure to bear upon the I.O.M. Steam Packet Co., who consented to run a daily service if supplies of coal were forthcoming, and the Ministry of Transport, in an interview with Mr. Loughborough, stated that if the I.O.M. Steam Packet Co had difficulties in obtaining fuel they would help them to obtain supplies through the Mines Department. This communication came as a surprise to the people of Douglas, who have been suffering great loss through there being no visitors at Whitsun, when the Island experienced the blackest holiday period since the war.

* * * * * *

Preparations for the T.T. are now well in hand. The timekeepers' box is erected, as also is the greater part of the grandstand and the Club enclosure. The roads are under repair, and the telephones have all been arranged.

* * * * * *

The Isle of Man authorities are very strict this year on such details as inefficient silencers.

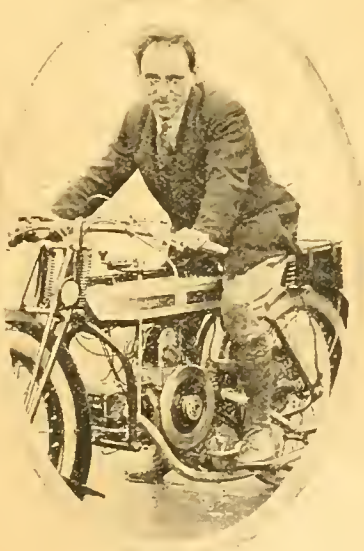
* * * * * *

We have received the following letter from one of the competitors, who fell foul of the police last week through not having an adequate silencer:

"I should like to warn competitors, and all visitors who intend bringing their motor cycles to the Island for the T.T. races, to have them fitted with really efficient silencers.

"Long extension pipes, however efficient they may be in practice, will not pass the super-critical men in blue, and no warning or caution is given, but a blue paper arrives in due course. Plain clothes constables are detailed off, as well as the ordinary police, for this special duty, so my advice to all is, 'be careful.'

"Horns, or some suitable means of audible warning, are also very necessary over here, as I believe an offender is to-day £5 the poorer for non-compliance with this law. There is a humorous side, however, and I consider the fine is cheap, by listening to these 'blue gentlemen' explaining how an 'efficient silencer' should be constructed."



A TRIO OF DOUGLAS ENTRANTS

J. L. Emerson.

Tudor Thompson.

H. Thorpe.

T.T. Notes and News.—

The daily steamer service from Liverpool to Douglas is due to start the day after to-morrow (Saturday), and it is hoped will be continued until after the T.T. races.

* * * * * *

Three cinema firms will be represented on the I.O.M. course.

* * * * * *

The A.J.S. nominated team for the Junior event will consist of H. R. Davies, Eric Williams, and H. F. Harris. G. Kelly, T. Sheard, and O. Wade are riding similar machines, but Chambers and G. Grinton are down for reserves.

* * * * * *

V. Ollson will ride a side-by-side valve 2¾ A.J.S. in the Junior event, and H. R. Davies, with possibly one companion, will take part in the Senior race, in addition to the Junior event.

The string band from the Palace Orchestra will perform during the races.

* * * * * *

Ireland will have at least three representatives in the races and possibly a fourth. T. E. Greene (an ex-Grand Prix winner) will be one of the B.S.A. team, and with previous experience of racing in the Island should prove a more than useful member of the combination. He is already in Ramsey, where the B.S.A. men have their headquarters. J. W. Shaw, of Belfast, who rode last year on a Norton and won the flying kilometre competition on the promenade, will again form one of the Norton team. R. Humphreys, of Dublin, will have a mount on the Velocette, and will form one of the official team. It is understood Chambers, of Belfast, a son of the well-known local agent, W. J. Chambers, has been offered a mount on one of the officially entered A.J.S. machines.

TABULATED LIST OF THE 64 ENTRIES FOR THE JUNIOR T.T. RACE.

32 Four-stroke Singles. 10 Twins. 22 Two-strokes.

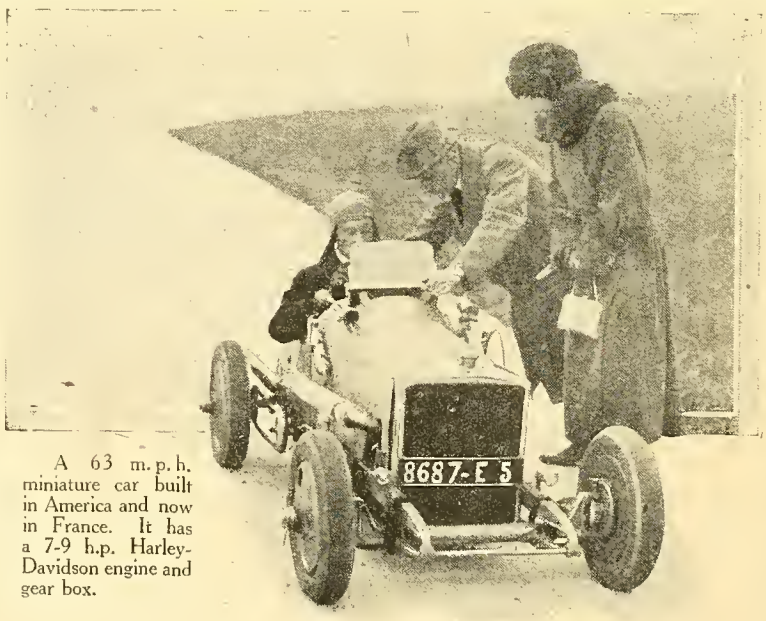
MINIATURE CARS.

A 7-9 h.p. Miniature Replica of Big Racing Cars capable of 63 m.p.h., and a 1¼ h.p. Toy built for a Boy.



Peter Crosby is a lucky boy, envied by all his chums, because he has a 1¼ h.p. racing car

PROBABLY the smallest practicable cycle car in the world is a little machine recently purchased by the Duke de Caze, a French sportsman, from its maker, Mr. Robert P. Breese. This car, which is a wonderful replica of a racing machine, has a wheelbase of 62in., a track of 37in., and its highest point is only 33in. from the ground.

Although this car immediately attracts attention by reason of its small dimensions, its charm lies in the fact that it is modelled entirely on big car practice, and has a most graceful single-seat racing body. The wheels are detachable wire type, with racing lock nuts, and originally served on a scout aeroplane. They are equipped with 20 × 4in. tyres, which are inflated to a very low pressure.

The engine used is a standard Harley-Davidson, offset in the wood frame. The Harley-Davidson gear box is used, and final drive is by means of side chains. Petrol is carried in the bulbous tail, and an oil tank is mounted on the left-hand side of the chassis; there is a spare wheel, electric lighting from batteries, kick-starter, a windscreen, and a radiator (which looks as if it carried water, but does not). In France the machine runs with car numbers, and it is hardly necessary to say it attracts immense attention and disturbs traffic, for the Paris policemen seem to take a delight in holding it up merely to have an opportunity of examining it at close quarters.

A 63 m.p.h. miniature car built in America and now in France. It has a 7-9 h.p. Harley-Davidson engine and gear box.

The other miniature we illustrate is an elaborate toy built by Mr. F. Gordon Crosby, special artist of *The Motor Cycle* and *The Autocar*, for his boy, who, by the way, grew more quickly than the car, so that by the time it was completed he required one a size larger. The detail work is good, and a photograph minus the passenger might pass easily for a powerful racing car.

A 1¼ h.p. Simplex auxiliary bicycle attachment, with clutch and two-speed gear, forms the power unit which drives the live axle by means of a chain.

Wakefield and District M.C.C.

Park Rash was the venue of a recent sporting hill-climb, which proved a great success. In the solo class G. R. Grundy (3½ Sunbeam) and G. Smith (4 Triumph) made clean ascents, but after a second climb the former was declared the winner. J. Brownhill (8 Sunbeam sc.) was the only sidecarist to get up unassisted.

Standard M.C.C. (Coventry).

Forty competitors turned out for the "tortoise competition" (which included a slow flat race, slow hill-climb, and a starting test). G. Thomas (4 Triumph sc.) and A. Anderton (5-6 Rover sc.) were first and second respectively.

Ilkley M.C. and L.C.C.

Disappointed in being unable to carry out their hill-climb and speed trial on May 21st, the members arranged a trial on somewhat novel lines. It took the form of a paperchase, but instead of dropping paper, the "hares" marked the turnings and cross-roads with dye. They led the competitors a merry chase across the hills between the Wharfe and the Nidd, with three observed hills, two watersplashes and two secret checks. W. Moore, on a 3¾ h.p. Scott, was the winner, with a loss of only four marks. H. W. Sellers (3½ Sunbeam) and G. W. H. Wade (4 Blackburne) tied for the second place, and M. Bowna- (6 L.M.C. sc.) secured the third place.

Southport A.C.

Below are complete tabulated results of the speed trials, briefly referred to last week, which were held on the sands at Southport:

CLASS 1 (275 c.c.), All Members.—1, S. Marks (2¼ Diamond); 2, B. Houlding (2 Matador).

CLASS 2 (275 c.c.), Trade and Expert Barred.—1, D. Burns (2¼ Diamond); 2, W. S. Finlayson (2½ Sirrah).

CLASS 3 (350 c.c.), All Members.—1, S. Marks (2¼ Diamond); 2, B. Houlding (2 Matador).

CLASS 4 (350 c.c.), Trade and Expert Barred.—1, W. Cunningham (2¾ Verus); 2, D. Burns (2¼ Diamond).

CLASS 5 (500 c.c.), All Members.—1, F. Collard (3½ Rover); 2, S. Marks (2¼ Diamond); 3, W. Johnson (3½ Sunbeam).

CLASS 6 (500 c.c.), Trade and Expert Barred.—1, C. Waterhouse (3½ Sunbeam); 2, R. Derbyshire (3½ Norton); 3, W. Cunningham (2¾ Verus).

CLASS 7 (600 c.c.), All Members.—1, J. Whalley (3½ Sunbeam); 2, F. Collard (3½ Rover); 3, S. Marks (2¼ Diamond).

CLASS 8 (600 c.c.), Trade and Expert Barred.—1, C. Waterhouse (3½ Sunbeam); 2, R. Derbyshire (3½ Norton); 3, B. Dewhurst (4 Indian).

CLASS 9 (750 c.c.), All Members.—1, F. Collard (3½ Rover); 2, G. E. Cowley, jun. (3½ Norton); 3, W. Johnson (3½ Sunbeam).

CLASS 10 (750 c.c.), Trade and Expert Barred.—1, C. Waterhouse (3½ Sunbeam); 2, R. Derbyshire (3½ Norton); 3, B. Dewhurst (4 Indian).

CLASS 11 (Unlimited), All Members.—1, P. Barron (7-9 Indian); 2, S. Marks (2¼ Diamond); 3, F. Collard (3½ Rover).

CLASS 12 (Unlimited), Trade and Expert Barred.—1, B. Dewhurst (4 Indian); 2, R. Derbyshire (3½ Norton).

CLASS 15 (Unlimited Passenger), All Members.—1, P. Barron (7-9 Indian sc.); 2, G. E. Cowley (3½ Norton sc.); 3, A. Tinkler (7-9 American X sc.).

CLASS 16 (Unlimited Passenger), Trade and Expert Barred.—1, E. Jones (10 Morgan); 2, A. Slater (7-9 Indian sc.); 3, W. E. Killey (10 Morgan).

Week-end Club Events.

June 2.—Wolverhampton M.C.C. Paperchase.
June 3.—North London M.C.C. Quarterly General Meeting.
June 4.—North West London M.C. London-Coventry-London Trial.
June 4.—West Kent M.C. Half Day Trial.
June 4.—Oxford University M.C. and Oxford M.C. Inter-club Hill-climb.
June 4.—West Birmingham M.C.C. Half Day Reliability Trial.
June 4.—Saltcoats and District M.C.C. Club Run to Turnberry.
June 4.—Leeds and District M.C. Gymkhana.
June 4.—Exeter M.C. and A.C.C. Hill-climb.
June 4.—Kidderminster M.C.C. Social Run.
June 4.—North Wales M.C.C. Speed Guessing Contest.
June 4.—Birmingham M.C.C. Week-end Trial to Llangollen.
June 4.—Essex M.C. Gymkhana.
June 4.—Holwood M.C.C. Club Run.
June 4.—Dewsbury and District M.C.C. Freak Hill-climb.
June 4.—Coventry and Warwickshire M.C. Twenty-four Hours Trial to Torquay and back.
June 4-5.—Wolverhampton Auto Nomads. Week-end Run to Llangollen.
June 5.—Amersham and District M.C.C. Club Run to Worthing.
June 5.—North London M.C.C. Picnic at Longdown.
June 5.—Ilkley M.C. and L.C.C. Hill-climb.
June 5.—Bury and District M.C. Team Trial.
June 5.—Stafford and District M.C.C. Club Run to Warwick.
June 5.—Loughborough and District M.C.C. Meet at Monsal Dale.
June 5.—Wakefield and District M.C.C. Club Run to Gordale Scar.
June 5.—Leeds M.C. Club Run to Morecambe.
June 5.—Newcastle and District M.C. Chase Cup Reliability Trial.
June 5.—Halifax and District M.C.C. Reliability Trial.
June 5.—Stamford and District M.C.C. and Peterborough M.C.C. Joint Speed Trials.
June 5.—Harrogate and District M.C.C. Club Run to Bridlington.
June 5.—Northern M.C. Social Run to Rothbury and Hill-climb.
June 5.—Canterbury and District M.C.C. Club Run to Tunbridge Wells.
June 5.—Eastbourne and District M.C.C. Picnic at Ticehurst.
June 5.—Berwick and District M.C. President's Run.
June 5.—Stockport and District M.C. Speed Trials.
June 5.—Basingstoke and District M.C. and L.C.C. Club Run to Sonning.
June 5.—Woolwich, Plumstead, and District M.C. Club Run to Maidstone and River Trip.
June 8.—Reigate, Redhill, and District M.C.C. Club Run.
June 8.—York and District M.C. Gymkhana.
June 9.—Taunton and District M.C. and L.C.C. and Bridgwater and District M.C. and L.C.C. Joint Hill-climb.
June 9.—Doncaster and District M.C.C. Gymkhana.

A Section devoted to Club Announcements will be found on Supp. xlvii.

Hull M.C.

Complete results are now available of the hill-climb held on the 21st ult., and are as follows:

350 c.c. CLASS.—1, A. E. Tuton (2½ Diamond-Jap), 41s.; 2, Bowie (2¾ Wooler), 43⅘s.; 3, Southern (2¾ Wooler), 46⅖s.

600 c.c. CLASS.—1, W. Padgett (3½ Norton), 32⅘s.; 2, N. Walker (3½ Norton), 34⅗s.; 3, A. E. Tuton (2½ Diamond-Jap), 40⅘s.

750 c.c. CLASS.—1, W. Padgett (3½ Norton), 31⅕s.; 2, N. Walker (3½ Norton), 35⅗s.; 3, G. Thompson (3½ Douglas), 37⅕s.

1,000 c.c. CLASS.—1, P. Walker (8 Excelsior), 30⅘s.; 2, W. Padgett (3½ Norton), 33⅗s.; 3, Barnes (7-9 Harley-Davidson), 34s.

Manchester M.C.

There was a very good attendance of spectators and competitors at the first hill-climb of the year at Booth-Dene on the 22nd ult., and some very keen riding was witnessed. Results, which were worked out on handicap, follow:

SIDECARS (Unlimited).—1, G. E. Cowley (2¾ Dalton sc.); 2, J. Bullough (8 Dot sc.); 3, A. E. Hitchcock (7-9 Harley-Davidson sc.).

SIDECARS (750 c.c.).—1, P. Platt (4 Bradbury sc.); 2, A. E. Winchcombe (6 A.J.S. sc.); 3, C. E. Smith (6 Bradbury sc.).

SOLO (500 c.c.).—1, F. H. Andrews (3½ Norton); 2, G. E. Cowley, jun. (2¾ Dalton); 3, J. H. S. Gardiner (3½ Triumph).

Connaught M.C.C.

With regard to the paragraph appearing on page 656 of last week's issue of *The Motor Cycle* concerning clubs confined to riders of particular makes, the secretary of the Connaught M.C.C. is Mr. G. Woodward, 111, Great Portland Street, London, W.1. Connaught riders who are interested in this club should communicate with him.

North London M.C.C.

On Saturday, 21st ult., the club held an acceleration test on a good stretch of road near Radlett. The results, worked out on the formula

$$\text{Figure of merit} = \frac{\text{Weight} \times \text{gear ratio}}{\text{Time} \times \text{c.c.}}$$

are as under:

SOLOS.

		Time.	Fig. of Merit.
1.	J. D. Sedgwick (3 A.B.C.) ...	6s.	250
2.	R. L. Richardson (3½ Alecto) ...	8s.	235
3.	A. J. F. Beaurain (3½ Sunbeam)	5⅘s.	222
4.	L. P. Walter (4 Triumph) ...	6⅘s.	181

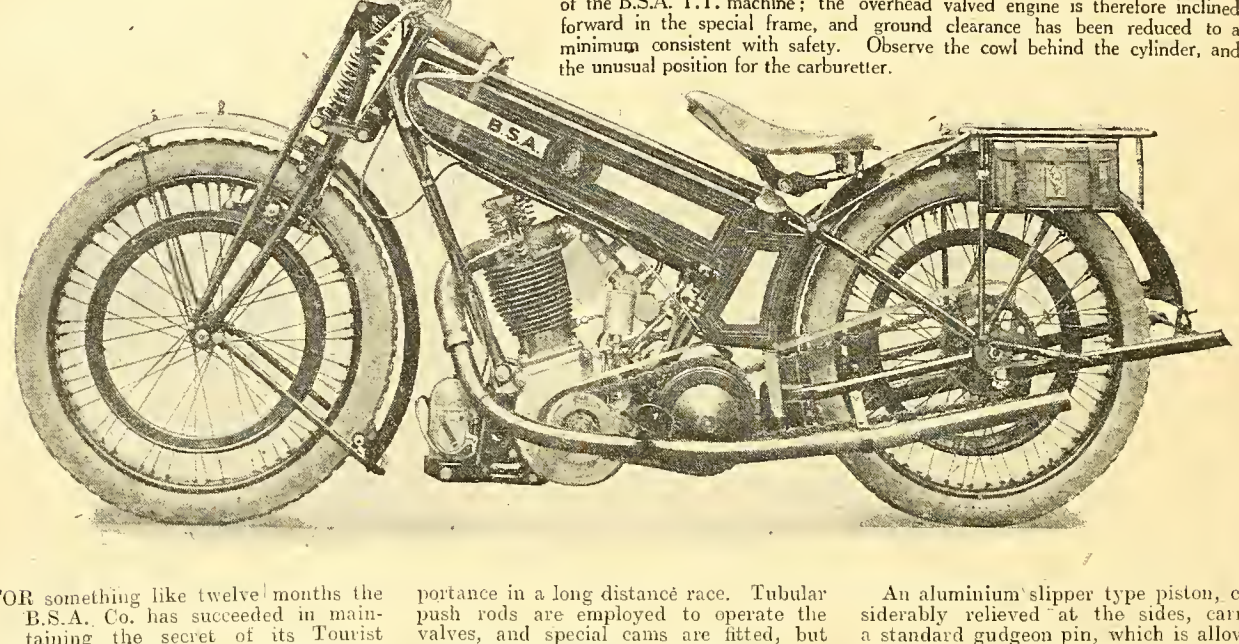
SIDECARS.

1.	R. W. Greaves (4 Norton)	6s.	303
2.	W. A. Hedderson (5-6 James) ...	7⅕s.	296
3.	A. J. Ivison (6 A.J.S.)	8s.	290
4.	H. B. Shutes (8 Matchless) ...	7⅘s.	255

A. J. F. Beaurain, riding a 3½ h.p. Sports Sunbeam, made fastest time of the day.

Birmingham M.C.C.

Owing to an error in timing on Porlock, it has been decided by the committee that no premier award could be given in the Lycett Trophy Trial, held at Whitsuntide. Medals have, therefore, been awarded as follows:



GOLD MEDALS.—R. W. Duke (4 Triumph), C. S. Love (6 A.J.S. sc.), H. V. Collins (2¾ Marloe-Blackburne), T. Stevens (7 James sc.), H. C. Jennens (3½ James), F. W. Giles (7 A.J.S. sc.), Gus Kuhn (2½ Verus), L. Jennings (2¼ Cedos), R. W. Vaughan (5 Massey-Arran sc.), F. C. Parkes (2¼ Sun-V.T.S.), G. Denley (2¼ Velocette), W. L. Handley (2¾ O.K.-Junior), G. J. Baragwanath (3½ Sunbeam), F. Short (5-6 James sc.), R. C. Bennet (2½ Federation), C. F. Hollyoak (2½ Federal), J. R. Fellows (3½ Sunbeam), R. Fellows (3½ Sunbeam), A. W. Thrush (3½ Sunbeam), S. Hall (3½ Sunbeam), B. Bourke (2¼ New Hudson), W. Bell (2¼ New Hudson), C. Richardson (2¾ Armis), R. T. Cooke (4 Triumph), and P. Yates (8-10 New Hudson cycle car).

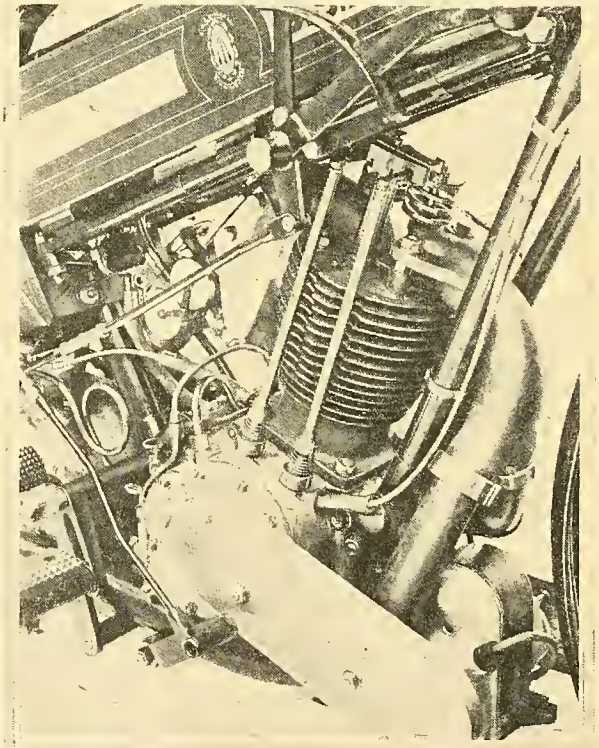
SILVER MEDALS.—H. R. Fowler (5-6 James sc.), H. Boynton (5-6 James sc.), L. Paynter (3½ Norton), L. H. Perry (10 Morgan cycle car), and F. Whitworth (8-10 Coventry Premier cycle car).

BRONZE MEDALS.—M. Bishop (2½ Sun-V.T.S.) and J. Bacon (3½ Sunbeam sc.).

MOTOR CYCLES FOR THE T.T. RACES.

An Unconventional Three-speed B.S.A. with Overhead Valve Engine; New Imperials for both Classes in the Junior Race; A.J.S., Blackburne, and New Comet Models.

To obtain a low centre of gravity was one of the chief aims of the designer of the B.S.A. T.T. machine; the overhead valved engine is therefore inclined forward in the special frame, and ground clearance has been reduced to a minimum consistent with safety. Observe the cowl behind the cylinder, and the unusual position for the carburetter.



FOR something like twelve months the B.S.A. Co. has succeeded in maintaining the secret of its Tourist Trophy motor cycles. Originally intended for the 1920 event, the machines have been undergoing a long course of trials, and consequently, although the design is distinctly unorthodox in appearance, all the features have been thoroughly tried out.

Both engine and frame have been specially designed for the work in hand; nevertheless, a number of standard parts are employed, and the whole, though unorthodox, is by no means unattractive in appearance.

Having a bore and stroke of 85×88 mm. respectively, the cylinder has a detachable cast iron head, in which are mounted vertical overhead valves. These valves have hollow stems, and the inlet is slightly hollowed in the head. Large diameter valve springs are held by light spring cups, and these in turn are retained by split conical caps internally threaded, which serve the double purpose of acting as tappet adjusters and valve spring cup retainers.

Unusual Valve Gear.

Quite an unusual feature of the overhead valve gear lies in the fact that the normal type of rocker pivot is dispensed with in favour of "knife-edge" bearings working in angular grooves. At first sight, the object of this may not be apparent, but it must be remembered that this method obviates the necessity for lubrication—a matter of no little importance in a long distance race. Tubular push rods are employed to operate the valves, and special cams are fitted, but the timing gear itself is standard.

A close up view of the engine, showing the valve gear, twin exhaust pipes, and foot operation for the oil pump.

An aluminium slipper type piston, considerably relieved at the sides, carries a standard gudgeon pin, which is allowed to float both in the piston bosses and in the small end of the connecting rod. Only one pston ring is fitted, but this combines the function of a pressure retainer with those of an oil scraper, excess lubricant being returned to the inside of the piston *via* a groove and a series of small holes drilled through the piston walls. A standard roller bearing big end and standard crank bearings are used, and, apart from the employment of steel flywheels and an oscillating pump, the lower part of the engine is of normal design.

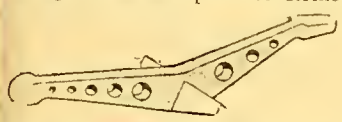
Mechanical Lubrication.

Oil is delivered to the pressure side of the piston by the mechanical pump, a by-pass being led to the main driving sprocket. It is expected that this system will be sufficient for the needs of the race; but, in case of emergencies, a foot-operated oil pump is connected directly to the crank case.

At the present moment the type of carburetter to be used has not been decided, but a B.S.A. carburetter is now fitted up, and embodies a neat handle-bar-operated jet control. A single large pipe leads the gases away from the exhaust port, but divides into two long tail pipes after clearing the frame members. The whole engine is inclined forward at a slight angle, and is carried extremely low down and well forward in the frame.

Motor Cycles for the T.T. Races—

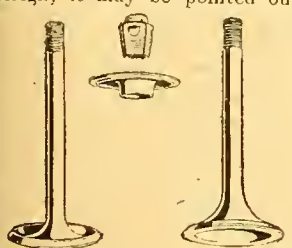
Supplementary to the oil supply already alluded to, the primary chain receives the benefit of excess oil from the crank case release, and, in addition, the B.S.A. engine-shaft shock absorber helps to relieve the chain of undue stress.



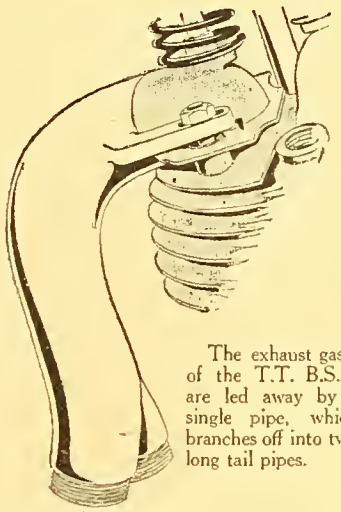
An aluminium slipper piston, having only one ring, is employed on the T.T. B.S.A. The gudgeon pin floats in the small end and piston bosses.

Clutch and three-speed gear box follow standard B.S.A. lines. The gear ratios are, of course, closer together, and are approximately 4.1 to 1, 5.6 to 1, and 8.2 to 1. No kick-starter is fitted, and the final drive is by chain.

A Low Centre of Gravity.



With regard to the frame, every effort has been made to keep the centre of gravity low, so as to ensure steadiness in cornering. The first point to strike the



The valve rockers are mounted on knife edge bearings, and all unnecessary weight is removed.

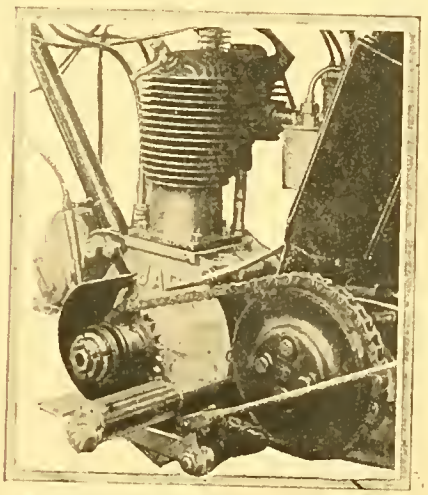
lie lies in the fact that the top tube and ain stays form a line from the head lug the rear hub. A two-gallon petrol nk is mounted on double rails, and the nt down tube is also duplicated from e engine plates to a considerable width ere they join the special head lug. Behind the saddle tube lies a one-llon oil tank, and the special frame nstruction provides a very low but vertheless comfortable saddle position. ndard spring forks, 650×65 mm. nlop tyres and belt rim brakes front d rear complete one of the most prac-al specifications we have yet seen. It ould be mentioned that the rear brake s a parallel movement, and can be erated by a heel pedal on either side the frame; hand operation is supplied the front brake.

As an instance of the thoroughness of design, it may be pointed out that

Exhaust and inlet valves of the T.T. B.S.A. differ considerably, the latter having a hollow head. Both have hollow stems, and the tappet clearance is adjusted by a split conical screwed cap.

The exhaust gases of the T.T. B.S.A. are led away by a single pipe, which branches off into two long tail pipes.

nail-catchers for both wheels form part of the equipment of every machine.

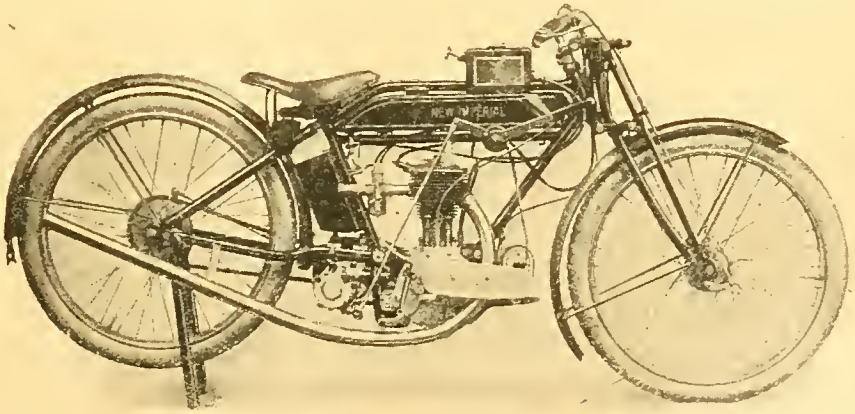


It is perhaps as well, at this stage, to refrain from saying too much as regards performance, but the machine has already proved itself capable of speeds which should be sufficient to win the Island race, and it is safe to say that such other vital features as brakework, reliability, controllability, etc., have at least received their due of attention. It will be a hard matter to pick a winner for the 1921 T.T., but the chances of the B.S.A. are much too good to be neglected. It is of interest to the touring rider also to know that the T.T. B.S.A. is extremely economical as regards fuel consumption, at least at all speeds which are of practical value to the tourist.

NEW IMPERIAL T.T. MODELS.

ALTHOUGH not widely differing from standard practice, the New Imperial machines which have been prepared for the T.T. races show that a considerable amount of care and attention have been bestowed upon their layout to render them suitable for the special conditions under which they will be ridden.

The framework is of special strength, and is yet 10 lb. lighter than that of the standard touring models, this effect being secured by the elimination of malleable castings from the construction. With the exception of the head, all the frame lugs are built up from steel. Sheet steel brackets for the tank and tool-box are also welded to the bottom rail and saddle tube respectively.



In appearance the machine is exceedingly rakish, the low saddle and flat handle-bars giving an effect of great controllability. Brampton forks are used, and a Webb expanding brake is carried to the front hub. The rear wheel chain sprocket also contains an internal expanding brake, this being operated by pedals on each side of the machine.

Shock absorber on the crankshaft sprocket of the J.A.P.-engined New Imperial; a guard is fitted to prevent stones reaching the transmission, and the release-valve pipe directs oil spray on to the primary chain.

Transmission is by ½×¼in. chains throughout, driving through a New Imperial constant mesh three-speed gear box. A clutch is fitted, but there is no kick-starter, while mounted on the engine-shaft is a shock absorber of the spring-loaded inclined plane type.

Gear changing is effected by means of a long and easily operated lever placed almost horizontally near the forward end of the tank.

Graceful lines and a low saddle position are specially noticeable features of the New Imperial T.T. models. They have three-speed gears and all-chain drive.

Motor Cycles for the T.T. Races.—

In both 250 c.c. and 350 c.c. classes the New Imperial machines are engined by J.A.P. single-cylinder units, and these are of improved design, having large valve caps of aluminium with ten radiating fins thereon. The sparking plug is carried at the rearward side of the inlet port, where the latter joins the cylinder head.

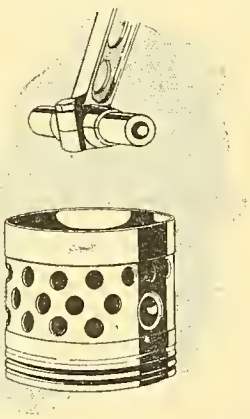
Two oil leads are taken from the special tank carried above the top tube of the frame. In the case of the 350 c.c. machine, both go directly to the crank case; but on the 250 c.c. model one lead passes to the back of the cylinder barrel. One oil lead is fed by gravity through a Best and Lloyd drip feed, while the other is connected to a hand pump. The separate oil tank permits the main tank to be reserved entirely for fuel.

Two features worthy of note in the lubricating arrangements are the crank case release pipes which lead from the timing case—one to the primary transmission chain and one to the inlet valve stem.

Weight distribution on the machine is so good that even with the rider seated there is only a few pounds difference in the loading of either wheel. Incidentally, these are built with heavy spokes, and carry 26×2¼in. tyres.

ROVERS PRACTICALLY STANDARD.

IT is an open secret that the New Rover Co. has been experimenting with an overhead valve engine, but, owing to the short time available for trying out before the Isle of Man races, it has been decided that a more conventional engine shall be used.

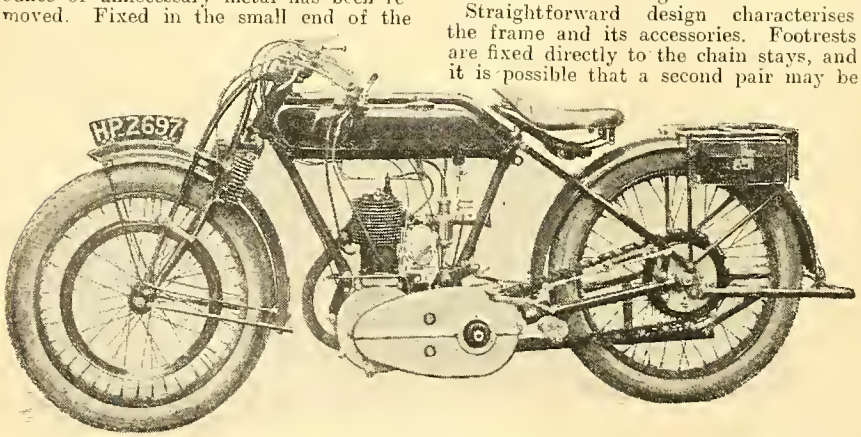


Externally, there is little difference between the T.T. engine and the well-tried 3½ h.p. touring engine, and, except for the addition of a Best oil pump driven from the timing gear spindle and delivering to the side of the cylinder, one might be pardoned for noticing no change.

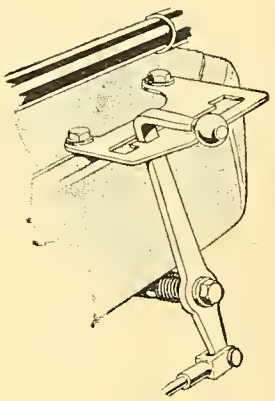
Internally, however, it is noticeable that considerable lightening of reciprocating parts has taken place. The cast iron piston is liberally drilled, and every ounce of unnecessary metal has been removed. Fixed in the small end of the connecting rod a hollow gudgeon pin floats in bronze bushes firmly held in the piston bosses, the connecting rod itself being lightened by machining and drilling.

Roller Big Ends.

A double row of caged rollers are employed for the big end, and the flywheels have been lightened and reduced in diameter.



Two ball bearings support the mainshaft on the driving side, but one only is fitted on the timing side. From engine to gear box standard practice is followed, and a Coventry silent chain is used, enclosed in an aluminium case. Clutch and gear box are of normal design, except that the clutch is hand-operated and that the gear ratios will be closer than usual. The ratios proposed are 4.56 to 1, 6.15 to 1, and 8.4 to 1. No kick-starter is fitted. Final transmission is by Brampton spring link chain, which serves also as a shock absorber.

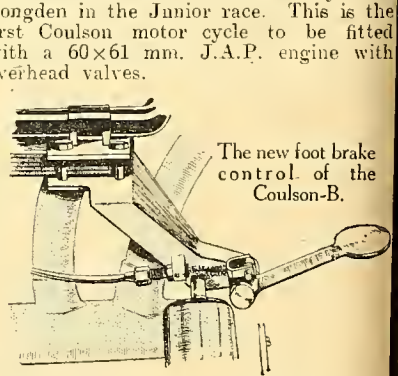


The cast iron piston has two very narrow rings, and is copiously drilled. Fixed in the small end of the drilled connecting rod, the gudgeon pin floats in bronze bushes in the piston.

The frame gives the appearance of unusual height between the cylinder head and tank rail, but the riding position is low, and the space may be accounted for by reason of the fact that provision had been made for the alternative of an overhead valve engine.

Straightforward design characterises the frame and its accessories. Footrests are fixed directly to the chain stays, and it is possible that a second pair may be fitted further back so as to provide a change of position for the rider.

Externally the T.T. Rover differs little from the standard model. A front belt rim brake is fitted, and the kick-starter is omitted.



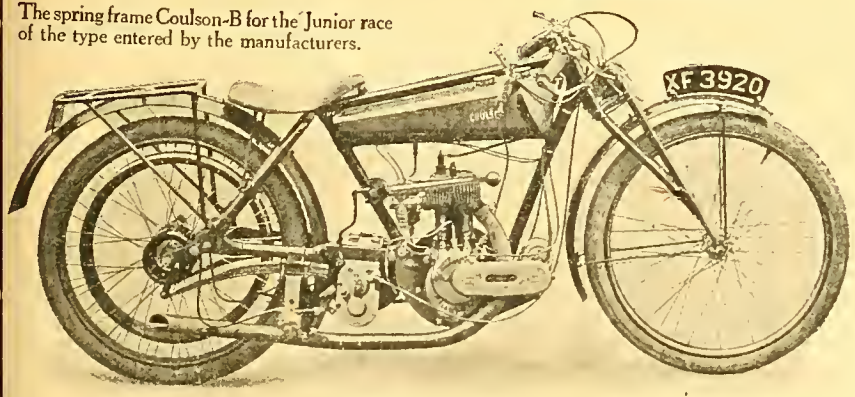
Gate and change speed lever at the front end of the tank of the T.T. Rover.

A pedal on each side of the machine operates an internal-expanding brake within the rear sprocket drum, and a dummy belt rim brake is utilised on the front wheel.

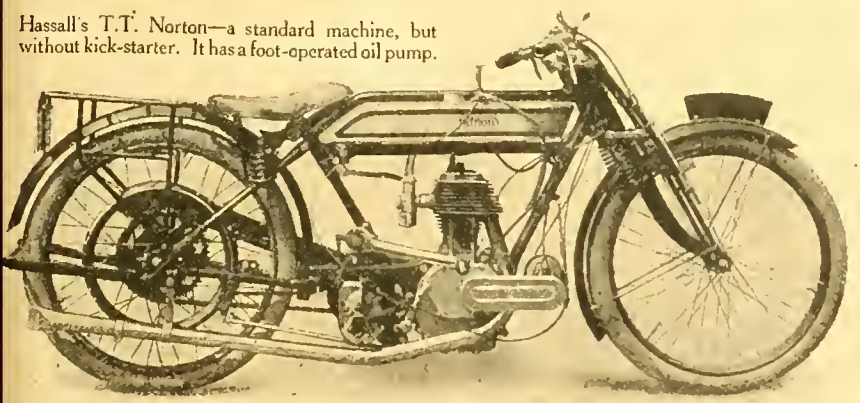
Standard Rover forks, extra large filler caps, and 26×3in. Dunlop tyres are further features of interest. Recent trials have shown that the T.T. Rover is remarkably fast, and especial interest will centre round the return of Rover machines to the world of speed.

A TWIN COULSON FOR THE T.T.

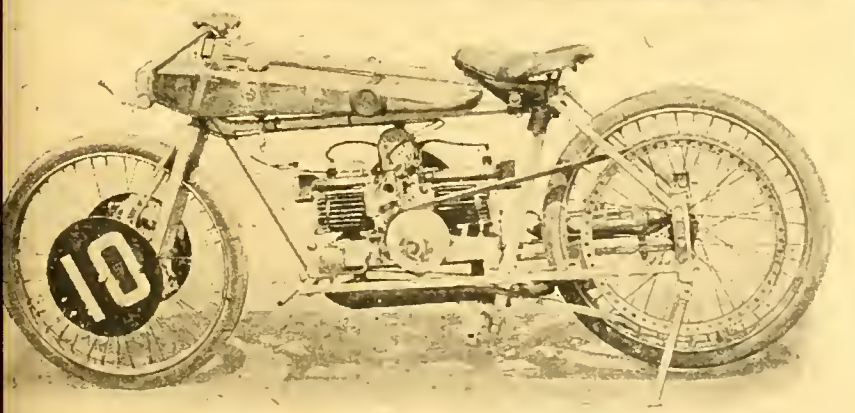
COULSON motor cycles are entered for both races, and last week we were shown the 2¾ h.p. twin-cylinder mount which will be ridden by Eric Longden in the Junior race. This is the first Coulson motor cycle to be fitted with a 60×61 mm. J.A.P. engine with overhead valves.



The new foot brake control of the Coulson-B.

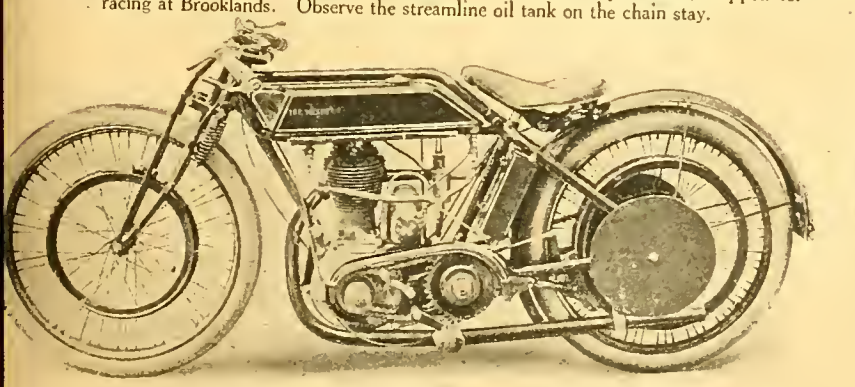


This model has a practically standard Coulson frame strongly built up with butted tubes, and is fitted with a hand-controlled pump-cum-drip feed lubricator worked from the handle-bar. The saddle is fixed directly to the frame, the rider depending on the frame springing only. On the top tube is fitted a tool-box having a cushion on the lid.



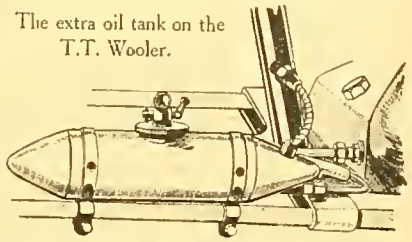
On the occasion of our visit to the Coulson works we also saw the frame of the machine for the Senior race, which is 3in. shorter than the standard and has a Sturmey-Archer two-speed gear box and a special tank holding over two gallons of fuel. This machine will be fitted with the new overhead valve Blackburne engine.

The spring frame Coulson-B for the Junior race of the type entered by the manufacturers.



Hassall's T.T. Norton—a standard machine, but without kick-starter. It has a foot-operated oil pump.

One of the few spring frame mounts in the Junior T.T. The 2¾ h.p. Wooler, stripped for racing at Brooklands. Observe the streamline oil tank on the chain stay.



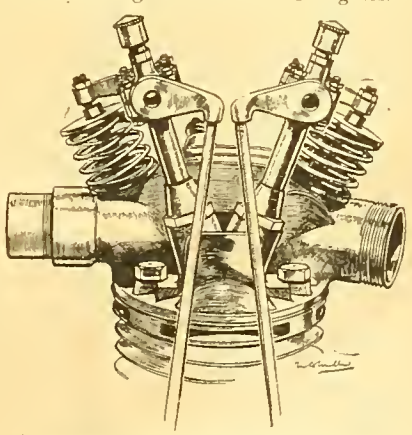
Reg. Brown's mount for the Senior event with the front guard removed for a Brooklands race. Two petrol supply pipes with rubber connections are fitted.

WOOLER MODIFICATIONS.

FEW modifications have been made in the T.T. Wooler, and with the exception of a special circular oil tank located on the rear fork, the machine represents the standard sporting model for 1922.

A new combustion head has been fitted which provides a larger inlet and exhaust port area. The external appearance is similar to the old model so far as its shape is concerned; a new metal, known as Haywards' Alloy, however, is used for the casting.

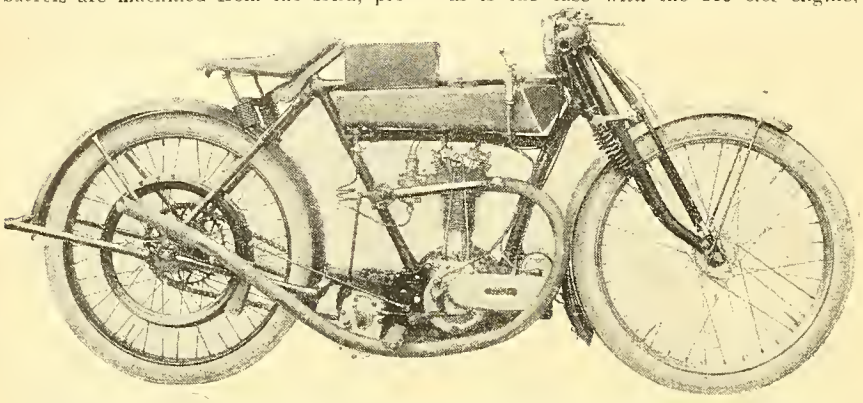
The extra oil tank on the T.T. Wooler.



The exhaust valve lifter is now in front of the magneto and timing case, and has been provided with a guide which eliminates the possibility of the control binding. A small flexible pipe from the base of the saddle tube directs the surplus oil from the engine back to the tank before it is conducted by another pipe to the oil sump in the crank case. This improvement greatly facilitates the flow of the lubricant.

It will be remembered that the oil is carried by a roller chain from the sump over the timing pinions, and the surplus is forced by the crank case pressure into the frame tube beneath the tank and thence down the saddle tube.

THE OVERHEAD VALVE BLACKBURNES.

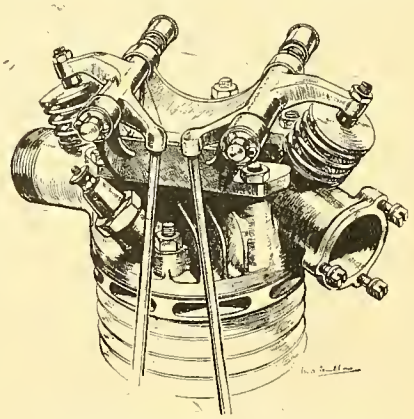


LAST year side-by-side valve Blackburnes came near to winning the Senior race. They were placed second and third, and in consequence many will watch with special interest the performance this year of the new engines. It is interesting that Messrs. Burney and Blackburne are among the entrants using overhead valve engines.

Arrangement of the overhead valve gear on the Junior T.T. Blackburne engine.

Motor Cycles for the T.T. Race.—

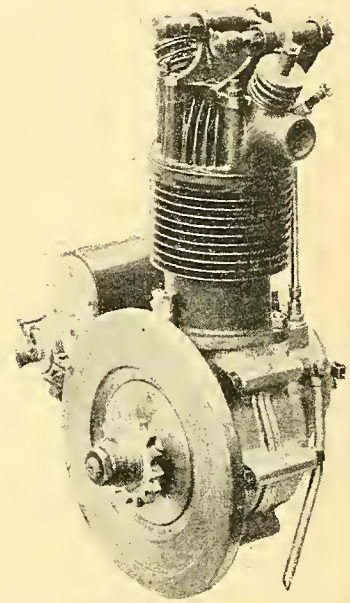
There are no startling features visible in the 500 c.c. power unit, but the work has been particularly well carried out, and the finish is excellent. The cylinder barrels are machined from the solid, pro-



The new 2¾ h.p. T.T. Blackburne, fitted with steel cylinder barrel and overhead valves. The engine sprocket is on the outside of the flywheel.

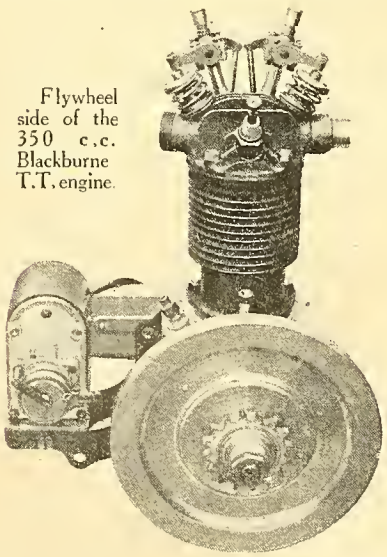
ducing uniformity and are of particularly attractive appearance. Following Blackburne practice, the cylinder head is detachable, and on the top of it is bolted the casting carrying the rockers which actuate the valves. The radiating fins on the head run diagonally across, and not fore and aft, as in the case of the smaller model. Adjustable tappets on the rocker ends are fitted, and the valves are each provided with a double spring.

Viewed from the flywheel side, it will be noticed that this engine has a smaller flywheel than the standard, and large grease cups are provided to lubricate the valve rocker spindles. The cylinder dimensions are the same as in the standard engines, *i.e.*, 85×88 mm. = 499 c.c. capacity.



In the Junior Race.

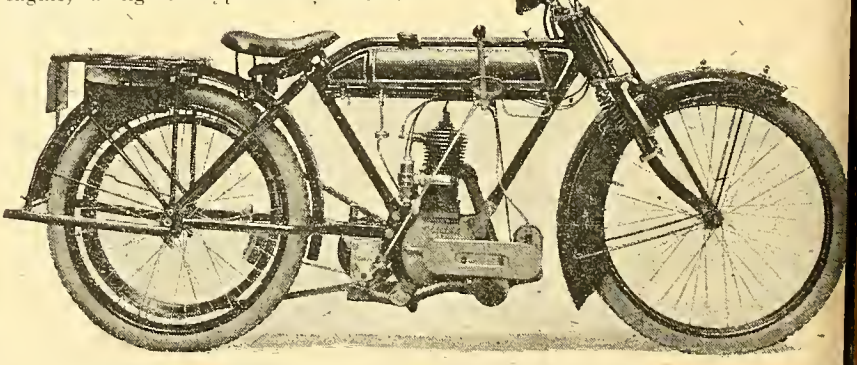
Our illustrations show that the cylinder head of the 2¾ h.p. model (71×88 mm. = 348 c.c.) is of a design somewhat differing from the 3½ h.p. type. The rocker spindles run in split bearings, hardened steel on hardened steel, and consequently can be adjusted. These bearings are attached to pillars screwed into the lugs on the head, and receive lubricant from grease cups placed on the top, and not, as is the case with the 500 c.c. engine, at the side. The tappets are adjustable, and double valve springs are supplied to each valve, as with the 3½ h.p. engine.



Overhead valve gear of the Blackburne engine for the Senior race. The radiating fins on the head run diagonally across in contrast to the practice on the smaller engine, on which the fins are arranged "fore and aft."

As a contrast to the larger pattern, it may be mentioned that the radiating fins run fore and aft, and, as in the large engine, a lighter type of flywheel is fitted. A transmission shock absorber is fitted to the rear wheel, consisting of blocks of rubber on the sprocket impinging upon vanes in the hub, similar in pattern to those used on the Enfield machines, which is adequate in absorbing all undue stresses with chain transmission.

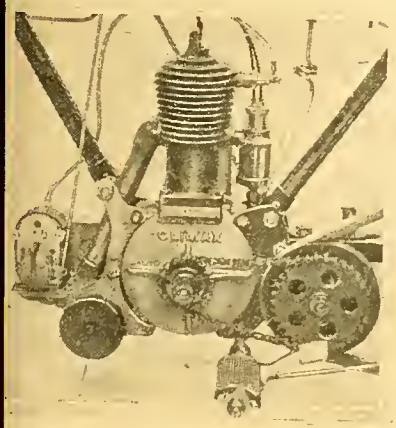
A smaller flywheel is fitted on the Senior Blackburne engine than on the standard power unit, which has the same bore and stroke—85 × 88 mm. respectively.



The frames are more or less standard, except that the tank tube is curved, so that there is clearance for the overhead valve gear, which, incidentally, has been kept as low as possible.

Flywheel side of the 350 c.c. Blackburne T.T. engine.

NEW COMET FOR THE JUNIOR RACE.

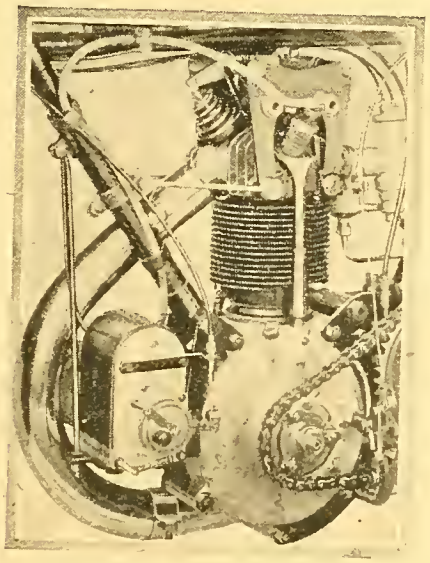


ONE of the features of last year's race was the consistent manner in which the 2½ h.p. New Comet two-stroke lapped the course. It was not "out to win" for its very young rider who deputised at the last moment was under in-

A neat machine, absolutely similar to the standard New Comet production models is entered in the Junior race. It performed well last year.

Motor Cycles for the T.T. Race.—
tructions to abstain from heroics and o demonstrate rather that a standard nodel lightweight could survive the race t a creditable speed.

The Climax engine (70×76 mm. =292 c.c.) s unique amongst marketed two-strokes in aving inside flywheels, and its staying ower was shown at Brooklands not long go in successful attempts on the long istance lightweight sidecar records.



2½ h.p. Climax two-stroke engine in the New Comet; it has a built-up crankshaft and inside flywheels.

New Comet T.T. machines are identical th the standard models sold to the blic; they have similar engines, frame d fittings, and as made they are appre-bly lighter than the minimum weight quired of machines entered in the T.T. es, and may thus have to carry ballast less it is decided to use a three-speed ar. At the moment of writing, how-er, the standard two-speed box is on machine.

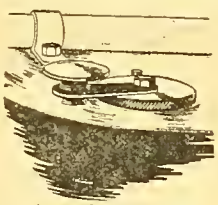
EATURES OF THE A.J.S

ERHAPS one of the most fancied chances for the Junior event is the A.J.S. team. For the 1920 race firm had had but little time to get overhead valve engine in trim, but er a year's experience on road and ck, little weaknesses have been elimi-ed, and the machine has been martened up" considerably. H. R. ries' hour and two-hour records on

Deep radiating fins and machined cylinder ribs are outstanding features of the T.T. A.J.S.

Brooklands last week will also do much to make the A.J.S. a favourite.

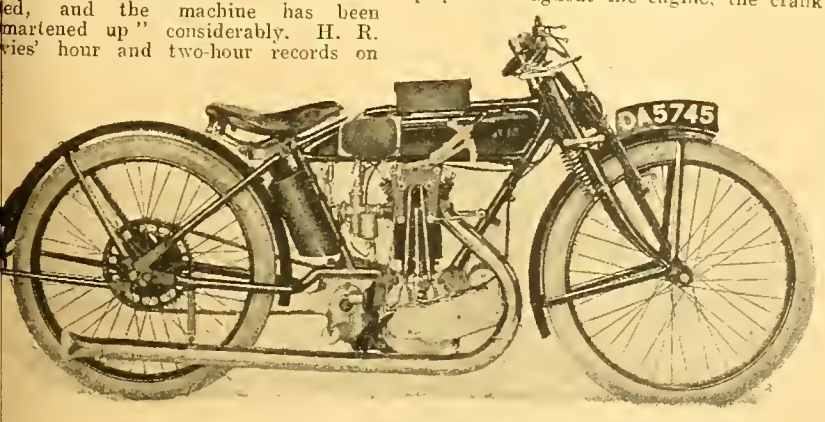
The overhead valve engine, having a bore and stroke of 74×81 mm. respectively, is retained for the forthcoming race, but has been modified in detail. A new cylinder head with improved cooling is fitted, the head being held down by a steel strap as before. Vertical ribs of considerable depth are used, and even the valve guides have ribs machined on them.



Quite an unusual amount of care has been expended on the manufacture of the cylinder, the fins of which are rough-turned and ground. Both cylinder and head are then copper-plated, and finally blacked. Four very narrow rings are fitted to the light steel piston, the piston itself being machined all over both inside and out. A very light hollow gudgeon pin serves to connect the piston to an extremely sturdy H section connecting rod.

Plain Bearings.

With the exception of the double row roller big end, plain bearings are employed throughout the engine, the crank axles and pin being attached to light steel flywheels, which have ample clearance in the crank case.



Lubrication is effected by a foot-operated pump, which delivers oil to the cylinder from a tank behind the saddle tube, the main tank being a container for fuel only, and an Amac carburetter fitted with a special extra air valve supplies the mixture.

Transmission is by ½×¼in. chain throughout, the crank case release pipe serving to lubricate the primary chain. A standard clutch and three-speed gear box (but without kick-starter) supplies the necessary ratios, which are approximately 4⅞ to 1, 6 to 1, and 9¼ to 1.

A novel type of filler cap fitted to the A.J.S. mounts.

Fitted with Druid forks, the frame is very neat and light, and we are informed that the steering is as near perfection as possible. It is noticeable that all large diameter bolts are hollow, and every effort has been made to keep the machine light. The actual weight with petrol and oil amounts to only 188 lb. Braking is provided by a foot-operated internal expanding rear brake and a stirrup brake on the front wheel rim, and the equipment includes 26×2½in. Avon tyres.

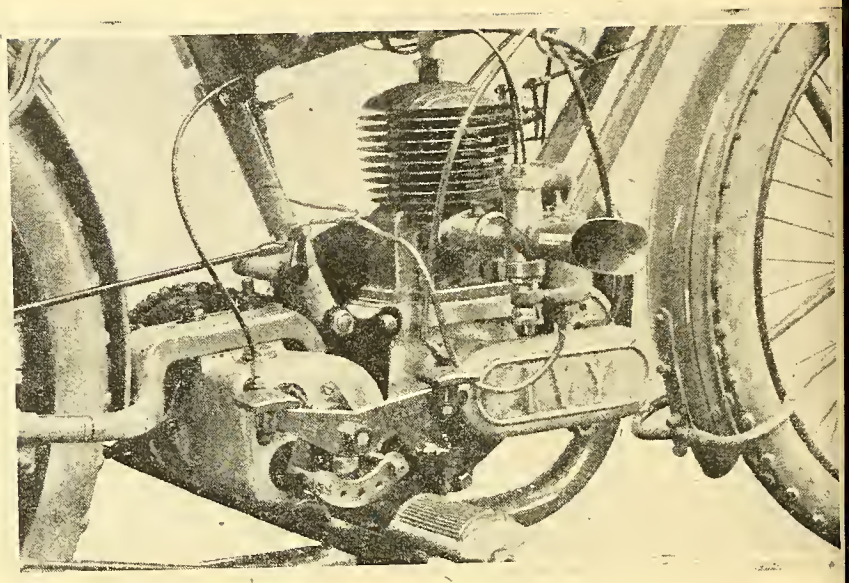
the 1921 T.T. A.J.S. has very pleasing lines. It is very similar to last year's model, but has been lightened and smartened up considerably.

3 h.p. IVY THREE-SPEED TWO-STROKE.

LAST year the 75×79 mm. (348 c.c.) Ivy engine was represented in the Isle of Man, and acquitted itself creditably, despite ill-luck with broken tank fittings and petrol pipe. Before reaching the public, however, the same engine made some excellent performances on the Old Wyche road at Malvern, making twenty-five non-stop ascents of the famous 1 in 2.9 hill solo, and fifteen climbs with sidecar. We ourselves have subjected these engines to some gruelling tests, and have found them to stand up to indefinite hard driving. All this being so, it is not surprising that the seven machines prepared for this year's races are equipped with absolutely standard engines.

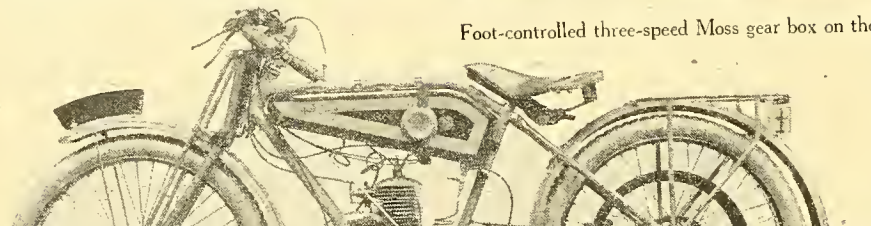
Handle-bar Operated Oil Pump.

The machines throughout are absolutely on standard lines, the tanks alone being slightly larger than those used ordinarily, and a handle-bar operation being adopted for the plunger of the Best and Lloyd drip-feed pump. Profiting by previous experience, special precautions have been made to secure the tank, which, in addition to the normal top rail clips, is steadied beneath by a flat strip of spring steel, enclosed in a leather sheath.



Chain transmission throughout is employed, and an Enfield shock absorber is used in the back hub. Special Sturmey-Archer three-speed boxes, with clutch, but less kick-starter, are fitted to all the machines except one. The exception is equipped with a new Moss three-speed gear box, made by the famous gear specialists, the Moss Gear Co., Ltd., of

Motor Cycles for the T.T. Race.—



Birmingham. On this particular gear the operation is by rocking pedal, so that the rider does not need to remove his hands from the handle-bars under any circumstances. An alternative form of hand control may be fitted if desired, but for racing purposes the foot operation has undoubted advantages.

Two brakes are fitted on the Ivy machines, one operating on the inside and one on the outside of a dummy belt drum on the back wheel. Both brakes are worked by heel pedals fitted below, but clear of, the footrests. The gear ratios are at present 4, 5¼, and 6½ to 1, with 26×2⅜in. tyres.

In the Island the Ivy stable will be in the charge of Howard C. Newman, so well known in pre-war speed events as "Ivy" Newman. His tuning abilities which gave him prominence then will be devoted to all the Ivy machines, which may be expected to make a consistent performance. A noteworthy feature of these machines is that nothing has been scamped; they are fitted with front stands and carriers, and the finish is excellent.

Foot-controlled three-speed Moss gear box on the 3 h.p. Ivy which will be ridden by N. Norris.

3 h.p. Ivy machine, with chain drive and three-speed gear, for the Junior T.T. The engine will pull a 4 to 1 top gear.

NEW T.T. LIGHTWEIGHT BREAKS RECORDS.

Success of the 350 c.c. o.h.v. A.J.S.

AT Brooklands on Tuesday, the 24th ult., H. R. Davies, on a 2¾ h.p. T.T. A.J.S. (very similar to the machines described elsewhere in this issue), successfully raised the hour record in the 350 c.c. class to 66 miles 162 yards. This record has been held since November, 1920, by Tudor Thomson, who covered 63 miles 696 yards on a 2¾ h.p. Douglas.

The A.J.S. was also successful in lowering the class times over the fifty and hundred miles distances and in beating the two-hour record, averaging a 3-4 m.p.h. greater speed than the previous bests.

G. E. Stanley (2¾ Singer) has held the fifty miles record, and Hugh Mason (2¾ N.U.T.-Jap) the hundred miles and two-hour records, both since July, 1913.

Added merit attaches to Davies's performances on account of the fact that his ride was made with a dented (steel) piston, caused by a valve breakage the day before.

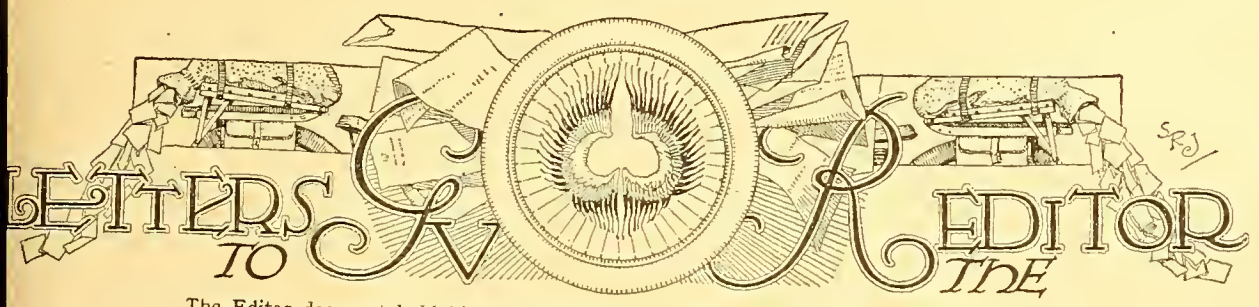
A tabulated list of these world's records (subject to confirmation by the A.C.U. and F.I.C.M.) follows:

H. R. Davies mounted on the machine with which he broke the 50 and 100 miles and one and two hours records on Tuesday of last week.

Records set up by H. R. Davies on 2¾ h.p. A.J.S. at Brooklands on May 24th.

CLASS B (350 c.c.).

One Hundred Miles.—Time, 1h. 32m. 45.6s.=64.68 m.p.h. (104.09 km.p.h.)



Fifty Miles.—Time, 45m. 6.8s.; average speed, 66.49 m.p.h. (107.02 km.p.h.)

Two Hours.—Distance covered, 130 miles 1,054 yards; average speed, 65.5 m.p.h. (105.08 km.p.h.).

One Hour.—Distance covered, 66 miles 162 yards; average speed, 66.1 m.p.h. (106.36 km.p.h.).

THE INTERNATIONAL SIX DAYS TRIAL.

INTEREST will soon be centred around the International Six Days Trial starting from Geneva on August 1st. Certain competitors are becoming rather disturbed regarding the motoring laws in Switzerland, which are known to be severe. We think, however, we may trust to the sporting feelings of the Swiss populace and the care and organisation of the Swiss M.C.U.

The Editor does not hold himself responsible for the opinions of his correspondents.

All letters must be addressed to the Editor, "The Motor Cycle," Hertford Street, Coventry, and must be accompanied by the writer's name and address.

NTEREST IN A SILENT CYCLE CAR.

Sir,—I saw the procession to Edinburgh on Friday, May 3th, going up Digswell Hill (beyond Hatfield). One cycle ar was noticeably quieter than the others. The exhaust was ell silenced and low. I think it was one of the larger ree-wheelers. The sound had none of the noisy sewing achine rattle, but was more like a good car.

What car was this? I suggest this query is of general terest, and trust that it will be answered by your readers.

St. Albans. SINCE 1895.

robably our correspondent has in mind one of the three-wheelers which has a four-cylinder engine?—ED.]

ARAGE CHARGES.

Sir,—Whilst passing through Carlisle this Whitsuntide, I n my machine into a garage for a gallon and a half of trol. I arranged to leave my machine for a few minutes hilst I had a little refreshment at a café three minutes' lk from the garage. Upon returning some forty or forty-e minutes later, I was presented with my bill: "Petrol, 3d.; garage charges, 6d." What next?

Keighley. REFLEXER.

lthough we ventilate this correspondent's grievance, we do not quite agree that the charge was excessive. It may be so, but most motor cyclists are accustomed to paying for storing their mounts for short periods!—ED.]

OM A MECHANICAL ENGINEER'S POINT OF VIEW.

Sir,—Referring to the letter of Mr. A. J. Hobdell *re* using rnal bearings for motor cycle hubs, in my opinion, the ef reason that they are not adopted is the fact that a great ny motor cycle designers, or should I say assemblers, have the necessary technical engineering knowledge to design table hubs. Especially is this lack of knowledge shown en it comes to designing a two-stroke lightweight machine. When I first entered the engineering profession after finish-my technical education, I desired to enter the production e of the motor cycle industry. My late engineering master ised me not to do so, as motor cycle design was not ineering—more a case of fancy and fashion. That, I am uid, is the general opinion of engineers.

Designers want to draw two wheels on their drawing rds, plan out various ways of connecting these two wheels ether, regardless of previous design and production thods, using the front wheel to steer with and the back el for propelling the machine. Study each part from an ineering design point of view, leaving the question of earance till the last. It is easier to make a properly gned machine handsome looking than to make a handsome ing machine into one of good design.

s there not another form of final drive suitable for a or cycle, namely, crank and connecting rod? I suppose system wants too much designing knowledge as against or chain drive? Whoever hears of a car having a ken propeller-shaft? And yet look at the number of cases broken chains one hears about.

n my opinion, motor cycles have still a long way to go ore they reach anything like final general design, and cially the present-day two-stroke, two-speed lightweight. one make and one has practically seen the lot—a colossal mple of sheer blind copying. DRAUGHTSMAN.

anchester.

nk and connecting rods have been tried on motor cycles. e think if "Draughtsman" attempted to design a motor cle with such a transmission he would discover many stacles.—ED.]

RETAINING OIL ON THE MAGNETO CHAIN.

Sir,—Will you permit me to ask if any of your readers possessing Villiers engines can give me the benefit of their experience in the following matter?

I have an Excelsior fitted with a 1920 Villiers engine, and I notice that towards the end of a run of any length, the magneto chain rattles unmusically in its aluminium casing.

On the casing being removed I invariably find that the chain is "bone dry," and, in addition, that several links are "stuck together."

Lately, I have been in the habit of oiling the chain profusely before starting out on a run, but the result is invariably the same. I should like to know if any of your readers have had similar experiences, and can tell me how the trouble may be obviated, or whether it is necessary to go to the length of removing the casing before every long journey.

I may say that the chain is not at all slack.

J. L. WILLOUGHBY.

CASTOR OIL FOR MOTOR CYCLE LUBRICATION.

Sir,—I observed in the run from London to Edinburgh that many of the machines smelt strongly at the exhaust of castor oil, and I should be pleased through your valuable space to learn what advantage the riders gained by using this oil. My own experience tends to prove that there can have been no advantage unless the sump was emptied very often, say every twenty miles or so.

While in the Air Force I carried out a considerable number of tests with a 90 h.p., eight-cylinder V type, air-cooled engine. The engine I fitted up on the bench with a standard propeller, and my tests were carried out with the object of ascertaining whether castor oil retained its lubricating properties over a period, when compared with a mineral oil of approximately the same viscosity. The first test was with castor oil, and into the sump I placed twenty-five pints. After warming the engine up I tested for the maximum revolutions, and also the length of time the engine kept them up without dropping. When the revolutions decreased they were shut down to 250 per minute, and kept at that for threequarters of an hour. Full revolutions were taken again. The sump was then emptied and twenty-five pints of best mineral oil placed in, the tests were repeated, and the following observations made:

(1.) The mineral oil at high revolutions broke down the revolutions before the castor.

(2.) The castor oil gave very poor revolutions after the threequarters of an hour, while the mineral gave nearly the same.

The castor oil in the sump was examined after the test and found to be gritty, very dirty, and not far short of rancid. From this, my conclusions were, that as the oil is insoluble in petrol, and has a high flash point, it was very good for the cylinder walls until it began to fail in its lubricating properties, so that it should be useful for short high speed work, but bad for long distance touring, unless the sump is emptied very often. No doubt a great many competitors did empty their sump, but I am interested in those that did not. W. A. BOOTH.

[Pure castor oil, as our correspondent says, is only suitable for sprint work. Wakefield's Castrol oil, on the other hand, is an entirely different proposition, although it smells very like castor, and is the favourite of many competition riders for all classes of riding. Possibly our correspondent has confused the two lubricants.—ED.]

SATISFACTORY ROAD SERVICE.

Sir,—Having recently noticed in your valuable periodical disparaging letters regarding the A.A. and M.U., I would like to draw your readers' attention to my recent experience of the A.A. road service.

On a recent Saturday I was motor cycling through North Lancashire, and this particular afternoon was an extraordinarily wet one. When a few miles from the nearest town my machine broke down. After vain efforts to trace the trouble myself, to my great relief one of the A.A. roadside mechanical outfits bore down upon me. In a very efficient manner the trouble was then traced to the magneto. There was no available shelter from the pouring rain, which added very considerably to the difficulty of putting the matter right; but this work was, nevertheless, uncomplainingly and thoroughly accomplished.

I might mention that this A.A. outfit was returning after being already on duty during the London-Edinburgh run.

Anfield. J.C.

PERFORMANCES OF NEW MACHINES.

Sir,—On reading your article under the heading, "The Performance of a Stock Machine," my attention was attracted by the statement that owners taking delivery of new machines should observe the following operations: "Dismantle and clean carburetter, examine plugs and adjust points, and examine contact breaker points and chains to see that spring links are correctly fitted." Surely such a procedure as this should be unnecessary with the present-day highly-developed and highly-priced machine.

When the price of an outfit runs up as high as £200, the buyer expects these things done before the machine leaves the works. That they are not done, I know to be true.

Very few machines will tick over in neutral absolutely steadily and evenly, yet a few minutes spent in attending to adjustment of plug and contact points immediately effect a big improvement. I have known new machines delivered with fluff, etc., blocking petrol pipes and carburetters; carriers, mudguards, etc., tacked on finger-tight. Such experiences lead one to wonder whether many machines do more than two or three miles on test. Petrol consumption seems to receive little attention also from the test department.

These are all small details, but when a purchaser has paid a fancy price for his machine, he expects it "ready to ride away," as so often advertised, in proper tune—not in any old condition. The buyer of a car does not expect to have to look over engine and transmission to make sure that all adjustments are correct, so why should a motor cyclist? W.G.

Wolverhampton.

PRIVATE OWNERS AND MACHINE-SMASHING TRIALS.

Sir,—I should like to enquire whether the Arbuthnot Trophy Trial this year is likely to resemble last year's as regards "road" surfaces. I personally was unable to compete, but on seeing the state of some of the machines afterwards I was thankful I did not, for the simple reason that I am not a millionaire. Judging from descriptions, the crank case of my machine (a Zenith, which, as is well known, has a smallish road clearance) would certainly have been damaged, if not completely ruined. One Zenith rider, I remember, had to stop a gash in his crank case with a cork. The majority of riders broke something.

Although this may be very enterprising for those who are well off, it makes the Naval officer (who usually is not) think twice before entering for the trial.

By all means make the course stiff. Introduce really bad hills with loose surface and difficult hairpin bends. Let the roads be bad and give a healthy minimum average speed. There is no need to let us off the inevitable watersplash; we are used to that!

The whole point seems to me to differentiate between roads (second, third, or even fourth class) and a collection of rocks and boulders. The latter are probably of much more use to geologists than to motor cyclists.

What do other N.O.'s think on this subject? K 15.

London.

["K 15" voices the plaint of amateurs generally regarding most trials. On the other hand "a healthy minimum speed" is unfortunately illegal at present.—ED.]

LUCAS AERO DYNAMOS.

Sir,—Our attention has been called to an advertisement appearing in your issue dated May 19th, in which Lucas aero dynamos, etc., ex surplus Government stores, are offered as being suitable for motor car or motor cycle lighting.

We have to point out that these dynamos are not suitable for use on motor cars or motor cycles, and that we cannot accept any responsibility in connection with them when so used.

Lucas aero dynamos are of a special pattern, originally manufactured by us for the Government for use on aircraft, and they were so designed that most of the energy was used for heating airmen's clothing, etc., and only a small portion of the output was available for charging the battery.

Even with the dynamo running at a speed of not less than 6,500 revolutions, although 20 ampères were passing into the resistances, only a maximum of 4 ampères was obtained for battery charging.

Obviously, it will be quite impossible to obtain an output of 20 ampères without the machine being specially cooled, as it was when fitted to an aeroplane, and for ordinary motor car or motor cycle work the dynamo would become dangerously hot, and the whole of the windings burn out.

We ask you to give this letter publicity in your columns in order that your readers may be made fully aware of the fact that we do not accept any responsibility whatever in connection with these dynamos when used on motor cars or motor cycles. JOSEPH LUCAS, LTD.

SIDECARS SUITABLE FOR DISABLED DRIVERS.

Sir,—With reference to the letter signed "1914-1919" in last week's issue, we have lately been consulted by an officer in very much the same predicament as the writer of this letter. He had purchased a Royal Enfield sidecar outfit, but had lost his right leg at the hip. We fitted both a right-hand and left-foot control to the rear brake, working independently or both together, and he now finds no difficulty at all in controlling the machine. The conversion took two days to do and cost about £3. It employs direct lever action and no Bowden wires. THE EXETER GARAGE CO.

Exeter.

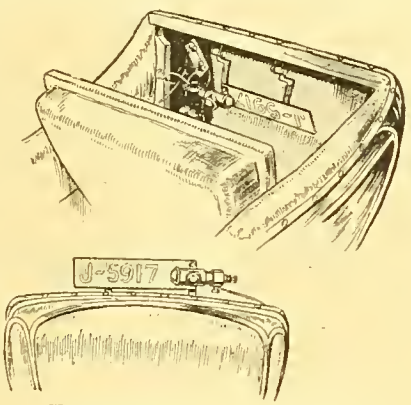
ANOTHER CLAIMANT TO THE HONOUR OF "THE FIRST SIDECAR."

Sir,—An article entitled "The First Sidecar," in a recent issue, has revived memories of my 2 h.p. leviathan, its trailer with open basketwork body, and the days when petrol was 8d. per gallon.

The accuracy of your historical data concerning Mr. Graham's patent and its subsequent exploitation by Components, Ltd., is not in question, but the history of the sidecar starts at an earlier date than is mentioned in your article.

It was, I believe, in the spring of 1902, that I submitted to Messrs. Mills and Fulford, Ltd., of Coventry, proposals and designs for a trailer body to be carried at the side of the bicycle in such a manner that the latter might bank at any desired angle, as is now done with the modern flexible sidecar. Messrs. Mills and Fulford constructed a carriage to my designs, and, after tests, reported that the steering of the outfit was faulty. The characteristic of flexibility was therefore discarded.

Application was then made for a master patent, but all efforts were frustrated by the publication of the humorous drawing referred to in your article. Prior to forwarding designs to Messrs. Mills and Fulford, I was advised to seek the opinion of the editor of a motoring journal (not *The Motor Cycle*), who admitted the novelty of the idea, and suggested giving it a practical trial. A few weeks later, while the experimental sidecar was undergoing tests, the journal published the aforesaid humorous drawing, which depicted Edwin taking advantage of the close proximity afforded by the sidecar to embrace his Angelina *en route*.



It transpired subsequently that a firm at Staines and another in U.S.A. were experimenting on similar lines at about the same time, so that it is difficult to say where, when, and by whom the first sidecar was devised; but to Messrs. Mills and Fulford should certainly be given credit for producing the first sidecar in marketable form.

One cannot but note with satisfaction that, after nearly twenty years, this pioneer firm, to whom sidecarists owe so much, maintains its position in the face of wider competition.

E. E. WALLINGTON BUTT.

PROTECTING THE REAR LAMP.

Sir,—I am sending two illustrations, which may interest some of your readers, showing the back number plate with electric lamp of my sidecar outfit. The plate when not required for night riding is swung inside the back locker. I think the following may be claimed for this idea: Breakage of bulbs reduced to a minimum. No loose cables to carrier frame. No unsightly numbers painted on panel or plate attached. Clean number plate. I do not know who the the makers are, but the best lamp I know of is the "Nytelyte," which suits the position splendidly. E.W.S.

These two sketches show clearly the plan adopted by "E.W.S." to insulate and protect his rear lamp.

Durham.

[While this plan has much to commend it, the position of the rear lamp does not comply with the strict letter of the law.—ED.]

SAFETY IN HILL-CLIMBS.

Sir,—In view of the several accidents that have taken place at recent hill-climbs, may I be allowed to make a suggestion or two to the various promoters and also to the A.C.U.

The first is that programmes should be limited in the number of entrants. It almost invariably happens that where the programme is a long one interest declines, and spectators begin to stroll about the course, and others to move their machines or cars about the course, as witness the exciting incident of the Crouch at Stile Cop on a recent Saturday, where nothing but the most superbly fine driving and nerve of Cocker averted what could otherwise hardly have failed to be a bad smash. I would suggest that programmes may be curtailed without hardship to anyone if the 750 and 1,000 c.c. or unlimited classes be cancelled where there are not at least five entrants for each class which are too large in capacity for the preceding classes. Usually the big capacity classes are composed of the same men and machines that competed in the smaller classes. Also, I see no reason why open and amateur classes of like capacity should not be run together, or, at any rate, consecutively, without a pause for the previous class to return down the hill. Provided the open class is run off first, this would also tend to prevent the same special machine being ridden by different men (*i.e.*, amateurs and professional) in their different classes.

It cannot be too strongly impresesd upon spectators, and also competitors (who are not faultless in this respect), how great is the danger of putting their machines on the road side, particularly near bends, and too close to the finishing line. It is not merely the fact of the machine being on the roadside, but the fact that it obstructs the view of the open road for the competitor that creates the danger, and has been the cause of so many accidents. I would also suggest to the A.C.U. that the rule applying to the T.T. regarding compulsory wearing of helmets be applied to all open speed events.

I am not an alarmist, but certainly think every precaution for safety should be taken, particularly as the lay press is beginning to ask, "Why should such dangerous sport be allowed on the public roads?"

Greater care, also, appears necessary in the choice of hills for competition. Speeds are so far in excess of those of but a short time ago, that conditions of curve and surface, width and other features of a hill that pre-war would be considered safe, may to-day be highly dangerous, and no open event should be held without the hill being first inspected and passed by an official of the A.C.U. properly qualified by experience, and who should determine the position of the finishing line with a view to a safe pull up.

JAS. L. NORTON.

IS THERE OVER-DEVELOPMENT?

Sir,—In your leading article in the May 12th issue, I notice that, while you naturally applaud the development of the motor cycle, which has taken place, you do not mention "over-development."

I certainly think that there is to-day a tendency to over-elaboration of our mounts. On my 1921 outfit I carry four dummy belt rims for the front brake (one on each and spare wheels), only one rim being in use at a time. Naturally, the cost of supplying and fitting these four rims is included in the purchase price.

Again, why fit the rear wheel with internal expanding brake?

On my machine the limit of cable adjustment has been reached in 1,000 miles, and, on dismantling, I found the brake to be a beautiful and expensive piece of work—in fact, there is only one thing wrong with it, it will not stop the machine. Surely the old rod and shoe rear brake is simple, effective, and cheap; and, in any case, I would rather rely on a steel rod for braking than on a wire cable.

Further, as I wanted a spare wheel carrier, I wrote for one to the makers of my outfit, and was told that this was incorporated in the luggage grid: price £4 10s. My friend, who required a spare wheel carrier for his Ford, obtained one for 6s. 6d.

I certainly think that the tendency of modern design should be towards simpler and cheaper fitments.

A departure. As I intend visiting the Yorkshire coast this summer, will one of your local readers kindly say if it is convenient to cross the river at Barton-on-Humber with a sidecar outfit (week days and Sundays)? OUIDON.

Brixton, S.W.2.

SUMMARY OF CORRESPONDENCE.

A Plumstead reader sends us a snapshot, unfortunately not suitable for reproduction, of a bridge, just beyond Outwell, not far from Wisbech, on which there is a warning that speed must be reduced to 2 m.p.h. whilst crossing. His only comment in sending us the photograph is "Herewith a sample of 'things we meet'"—and as the road seems very safe the description is very apt.

"Fairplay" complains that recently, having occasion to replace the coils of his lighting and generating set, he wrote the firm which represents the machine and the firm which represents the makers of the generator for quotations. From the former came a *pro forma* invoice for £2 12s. 1d., and from the latter a reply quoting £4 nett.

Mr. H. Lidington calls attention to the possibility of Sturmey-Archer clutch spring screws working loose when hidden in chain cases.

"L.R.S.," in the course of an expression of great satisfaction with his 1921 P. and M., comments on the greater speed of this year's model as compared with R.A.F. and earlier types.

BOOKS AND MAPS FOR MOTOR CYCLISTS

Issued in conjunction with *The Motor Cycle*.

	Price net.	Book post.
"HINTS AND TIPS FOR MOTOR CYCLISTS." Containing over 400 useful "wrinkles" and helpful hints in regard to motor cycles. Seventh Edition	2/-	2/3
"TRACING MOTOR CYCLE TROUBLES." A system for tracing motor cycle faults and of remedying them when found. Fourth Edition ..	2/-	2/3
"MAGNETOS." By A. P. YOUNG. A complete treatise on magneto ignition for motor cars, motor cycles, and aeroplanes. Second Edition	4/6	4/10
"TWO-STROKE MOTOR CYCLES." A reliable treatise on Two-strokes, from the rider's point of view. Just published	3/-	3/3
"MOTOR CYCLE REMINISCENCES." By "IXION," of *The Motor Cycle*	5/-	5/3
"THE MOTOR CYCLE" ROAD MAPS, England and Wales, Scotland, London (showing roads into and out of London and avoiding London). Mounted on linen. Set of three, complete in case.	5/6	5/10
"THE MOTOR CYCLE" ROUTE BOOK. With 32 pages of Road Maps of England and Wales, Scotland, and the London District ..	5/-	5/4

Obtainable by post (remittance with order) from ILIFFE & SONS Ltd., 23, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.

QUESTIONS AND REPLIES

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 2d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects. ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

CONVERTING A STARTER MAGNETO.

Having just purchased a magneto which has been used for aeroplane work, I want to fit it to a single-cylinder machine. The slip ring has two cams directly opposite each other. Would it be best to remove one of the cams or fit a seven-teeth sprocket (fourteen-teeth on timing)? If I remove cam, are any other alterations necessary?—H.W.D.

It is immaterial which cam you remove from the contact breaker, so long as you take one away. Run the magneto at half-engine speed, *i.e.*, use the same size sprocket on the armature as on the camshaft.

HEAT AND WATERPROOF DOPE WANTED.

(1.) Can you recommend a good dope which will stand heat and water, and yet give a bright finish with some degree of permanence? The beauty of my machine is not exactly accentuated by the presence of a somewhat bulky silencer covered with brown rust. (2.) What, in your opinion, should be the maximum speed attainable on a standard 3½ h.p. Rudge Multi in good tune? (3.) Possibly I use too high a ratio. What is usual for the Rudge engine?—E.H.B.

(1.) We do not know of any enamel or paint which will preserve its appearance permanently when subjected to heat and water. Probably the best thing to do is to blacklead the silencer frequently. (2.) 55 to 60 m.p.h. (3.) On the level you will probably get the best speed results with a gear of about 4¼ to 1.

MR. PUNCH'S ADVICE!

Will a Dixie magneto for a twin engine supply current for lighting purposes—that is, if it is mounted separately to the one now on the machine?—P.H.

It is quite possible that anyone experienced in the construction of simple electrical apparatus could devise a means of converting a Dixie magneto into a lighting generator, but it is impossible for us to give instructions on such an involved question in the short space at our disposal here. In any case, the conversion would be of an experimental nature, and might not be altogether successful; therefore, it would be preferable to buy a dynamo specially designed and manufactured for motor cycle lighting.

MAXIMUM SPARK ADVANCE.

To what extent would it be safe to advance the ignition on a Villiers engine with flywheel magneto? As the timing rod can move through an angle of 90°, this means that on full advance the spark occurs 35 mm. before T.D.C. This seems to me excessive, though the engine takes it nearly all at about 25 m.p.h., though not when all out.—RI 9333.

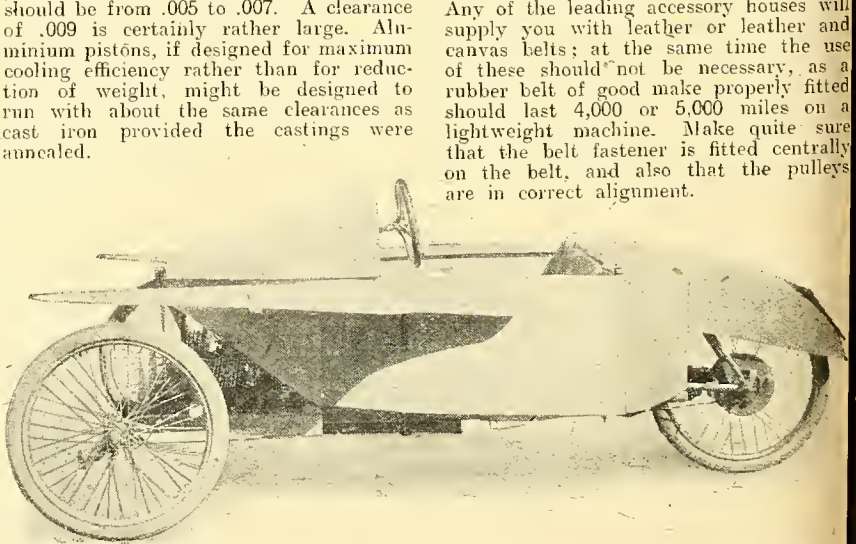
If the spark is timed to occur on top dead centre when the control is fully retarded, it should be possible to advance it from 27° to 30° without any detriment to the engine.

PISTON CLEARANCES.

In fitting aluminium pistons to an 8 h.p. air-cooled J.A.P. engine, bore 3.375in., what clearance should be allowed, *i.e.*, what diameter must the new pistons be? The existing cast iron pistons are 3.366, which makes a total clearance of .009. Is this not excessive for cast iron?—J.C.

It is impossible to give you definite figures, as everything depends upon the design of the piston. With cast iron pistons in your engine the clearances should be from .005 to .007. A clearance of .009 is certainly rather large. Aluminium pistons, if designed for maximum cooling efficiency rather than for reduction of weight, might be designed to run with about the same clearances as cast iron provided the castings were annealed.

A QUESTION OF SIDECAR WHEEL SIZE



(1.) Is a 1914 two-speed 7·9 h.p. Indian suitable for sidecar work? (2.) What would be the effect on the running, steering, etc., with sidecar with 26×2⅜ tyre, the machine's tyre being 28×3? Will it cause machine to run to one side, as the sidecar wheel would have to travel faster than the 28in. wheels on level?—J.W.W.

(1.) The machine is quite suitable for sidecar work, although, of course, its hill-climbing powers will not be so great as those of a modern three-speed model. (2.) If the sidecar is properly attached with the wheel vertical and in correct alignment, the smaller tyre will not cause any appreciable ill-effect in the running; as a matter of fact, a 28×3 tyre can be fitted to a 26×2⅜ rim provided there is sufficient clearance beneath the mud-guard.

BELT TROUBLE

I have a 2¾ h.p. four-stroke machine, and have had endless troubles with broken belts; rubber belts seem to be useless for the present day roads. Can very strong leather belts be obtained now?—L.E.

Any of the leading accessory houses will supply you with leather or leather and canvas belts; at the same time the use of these should not be necessary, as a rubber belt of good make properly fitted should last 4,000 or 5,000 miles on a lightweight machine. Make quite sure that the belt fastener is fitted centrally on the belt, and also that the pulleys are in correct alignment.

An experimental cycle car constructed by the Foster Instrument Co., of Letchworth, for the purpose of testing a 4½ h.p. flat twin Levis engine. The nucleus of the machine is a 1912 F.N. motor cycle, of which the clutch, two-speed gear, and shaft transmission have been retained

AN OBSOLETE MODEL

The connecting rod of my 3½ h.p. Minerva motor cycle has broken. Where can I have it replaced?—B.S.

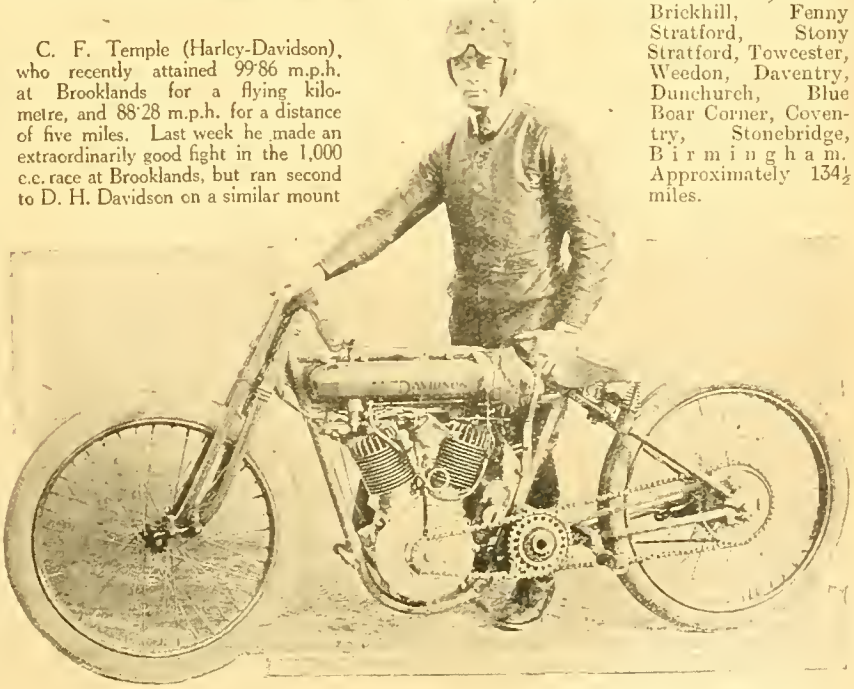
Minerva motor cycles ceased to be manufactured about eleven or twelve years ago, and it will be very difficult to obtain a new connecting rod. You might be able to get a second-hand one, however, by advertising your requirements; it would be a most expensive proceeding to have a new one machined from a hand-made forging.

WORN MAIN BEARINGS.

A 1910 single gear Triumph which I ride has developed a noise in the crank case, on the pulley side I think. It is a knocking sound, with a distinct ring to it, and only occurs when the engine is running fast on the level or downhill; I cannot notice it when the engine is pulling hard. I have just had the connecting rod rebushed (both ends), and the piston rings renewed. I cured it once by putting a leather washer behind each ball bearing in the crank case, but the cure was only temporary. I am inclined to think that the fault is in the ball bearings, and yet they both are a good push fit in the crank case.—A.H.T.

It appears that the ball races themselves are somewhat worn, or that the one on the pulley side is too loose a fit in the crank case. We assume, of course, that you have made quite sure that the pulley is not loose on the main shaft, and that there is not an excessive amount of end play on the shaft.

A TRANSMISSION KNOCK.



My 2½ h.p. two-stroke had developed a loud knocking sound. Thinking that the big end was worn, I took down the clutch, pulley, and crank case cover, and was about to take down the big end when a mechanic told me that it did not need rebushing, because there was only a little side play, so I put back the parts I had taken down. Engaging low gear, the machine started easily, but on trying to start it a second time I found that the machine could be wheeled in low gear as easily as if in neutral. I then tried to start it in top gear, and it started easily; and, changing down to low gear, I found it would run, although it pulled badly, but on no account will it start in low gear, and the knocking sound is worse than ever.—E.C.

Your description of the trouble is not at all clear, but we should imagine that the dogs of the low gear are only partially in mesh, and that they come out of engagement when you attempt to start the engine by pushing the machine along in low gear. Provided that the dog clutches are not damaged, it is merely a matter for adjustment of the gear control mechanism, but as you do not state the make of gear box we cannot tell you what to do. We would strongly recommend that you allow a reliable motor cycle mechanic to examine the machine, as you may do a considerable amount of damage if you use it for any length of time in its present state.

Important Dates.

Tues., June 14th—Junior T.T. Race.
Thurs. June 16th—Senior T.T. Race.
Sat., June 18th—North-Western Centre A.C.U. Open Speed Trials.
Sat., June 25th—M.C.C. Inter-team Trial for "The Motor Cycle" Cup.
Fri., July 1st, and Sat., July 2nd—Arbuthnot Trophy Trial.
Sat., July 2nd—Bournemouth M.C.C. Open Reliability Trial.
Sat., July 2nd—500 Mile Race at Brooklands for the Miller Gold Cup.
Thurs., July 7th—Essex County and Southend A.C. and Essex M.C. Joint Open Speed Trials.
Sat., July 9th—St. Andrews Speed Trials.
Sat., July 9th—Cardiff M.C.C. and associated clubs Open Hill Climb.
Mon., July 11th, to Sat., July 16th—Scottish Six Days' Trial.
Sat., July 16th—Ilkley M.C. and L.C.C. Open Reliability Trial.
Sat., July 23rd—East Midland Centre A.C.U. Open Speed Trials.
Sun., July 24th—Motor Cycle Grand Prix Race in France.
Sat., July 30th—Newcastle and District M.C. Open Speed Trials.
Mon., Aug. 1st, to Sat., Aug. 6th—International Six Days Trial in Switzerland.
Mon., Aug. 1st to Sat., Aug. 6th—Anglo-Dutch Reliability Trial.
Sat., Aug. 6th—B.M.C.R.C. Open Brooklands Meeting.
Sat. Aug. 6th—North Wales M.C.C. Open Reliability Trial.
Fri. Aug. 12th—Motor Cycle Grand Prix in Belgium.
Sat., Aug. 13th—Cumberland M.C.C. Open Reliability Trial.
Sat. Aug. 20th—Western Centre A.C.U. Open Speed Trials.
Thurs. Aug. 25th—Ystalyfera and Carmarthen M.C.C. Open Speed Trials.
Mon., Aug. 29th, to Sat., Sept. 3rd—A.C.U. Six Days Trial.
Sat., Sept. 17th—Grand Prix Race for Cyclo Cars.

C. F. Temple (Harley-Davidson), who recently attained 99·86 m.p.h. at Brooklands for a flying kilometre, and 88·28 m.p.h. for a distance of five miles. Last week he made an extraordinarily good fight in the 1,000 c.c. race at Brooklands, but ran second to D. H. Davidson on a similar mount

EXPERIENCES WANTED.

"C.W.P." (Herne Hill).—7 h.p. A.J.S. and 8 h.p. Clyno, specially regarding consumption (oil and petrol), climbing, and speed.

"J.E.M." (Harrow).—5 h.p. Sporting Zenith, petrol consumption, ease of starting, and use of Gradua gear.

RECOMMENDED ROUTES.

SHEFFIELD TO SCARBOROUGH.—W.H.

Sheffield, Rotherham, Doncaster, Wentbridge, Ferrybridge, Aberford, Wetherby, Long Marston, Rufforth, York, Malton, Rillington, Sherburn, Ganton, Seamer, Scarborough. Approximately 106 miles.

HITCHIN TO WOODBRIDGE.—W.S.

Hitchin, Stevenage, Walton, Hertford, Ware, Standon Station, Little Hadham, Bishop's Stortford, Dunmow, Rayne, Braintree, Coggleshall, Marks Tey, Colchester, Stratford St. Mary, Capel St. Mary, Copdock, Washbrook, Ipswich, Martlesham, Woodbridge. Approximately 88½ miles.

WEMBLY TO MANCHESTER.—E.A.C.

Wembly, Harrow and Wealdstone Station, Bushey Heath, Elstree, Radlett, St. Albans, Dunstable, Hockliffe, Woburn, Newport Pagnell, Gayhurst, Stoke Goldington, Hackleton, Northampton, Kingsthorpe, Brixworth, Market Harborough, Kibworth, Oadby, Leicester, Loughborough, Hathern, Kegworth, Shardlow, Derby, Belper, Matlock, Rowsley, Bakewell, Buxton, Fernilee, (edge of) Taxall, Whaley Bridge, Disley, High Lane Station, Stockport, Levenshulme, Manchester. Approximately 183½ miles.

SALFORDS TO BIRMINGHAM.—A.H.T.

Salfords, Reigate, Burgh Heath, Ewell, Surbiton, Kingston-on-Thames, Richmond, Kew, Kew Bridge Station, Ealing Common, Alperton Station, Harrow and Wealdstone Station, Bushey Heath, Elstree, Radlett, St. Albans, Redbourn, Markyate, Dunstable, Hockliffe, Little Brickhill, Fenny Stratford, Stony Stratford, Towcester, Weedon, Daventry, Dunchurch, Blue Boar Corner, Coventry, Stonebridge, Birmingham. Approximately 134½ miles.

Burying the Hatchet.

Peace now reigns in Belgium, and the Motor Cycle Union of Liège has become affiliated to the Belgian Motor Cyclists' Federation, which is the A.C.U. of Belgium.

Forewarned is Forearmed.

Motor cyclists in the Wanstead district are warned by a reader, who signs himself "A Victim," of great police activity in that locality. Our correspondent states that two special constables are stationed at the Eagle, Snaresbrook, examining brakes and number plates, etc. Sinn Fein activities in London and the number of burglaries around Wanstead are also commented upon by "A Victim."

An Air Force Reunion.

So many airmen are motor cyclists that we make no apologies for publication of the following announcement:

"The annual reunion dinner of the Independent Air Force will be held at the Hotel Cecil on Monday, June 20th, at 7.30 for 8 p.m. All officers of Army troops and other attached units are invited. The Chief of the Air Staff, Air-Marshal Sir H. M. Trenchard, Bart., K.C.B., D.S.O., A.D.C., will take the chair, and Wing-Commander H.R.H. the Duke of York, K.G., has graciously signified his intention of being present."

I.O.M. Car Road Races in 1922.

Next year, for the first time since the war, there will be Tourist Trophy races for cars in the Isle of Man. Two races are certain, *i.e.*, classes for cars of 2,500-3,000 c.c., and not exceeding 1,500 c.c. respectively; and, if the authorities sanction a third day's racing, it will be reserved for the 1,100 c.c. class (in which case the 1,500 c.c. class will have a minimum limit of 1,100 c.c.).

Competing cars in both the big races must have *engines of not fewer than four working cylinders*, which, in conjunction with minimum capacity and weight clauses, means that the super-efficient twin-engined cycle car is effectively barred from competing for either the Tourist Trophy or the "Fifteen Hundred" Trophy.

Entries at ordinary fees (£75 per car) close on December 31st, but late entries at £100 per car may be accepted until March 31st, 1922.

Another Race in France.

What is known as the Grand Prix de France, organised by the Moto Cycle Club de France, over the Circuit de Provins, which has taken the place of the Circuit de Fontainebleau, will be held on June 26th.

This is not to be confounded with the Grand Prix of the Union Motocycliste de France, which will be held at Le Mans on July 23rd, for which a number of British entries have already been received.

The former race will be open to motor bicycles, sidecar outfits, and two-seated cycle cars. Entries close at ordinary fees on June 10th, and should be sent to the Moto Cycle Club de France, 81, Avenue de la Grande Armée, Paris, France. Entries cost 250 francs.

We have a few entry forms in *The Motor Cycle* offices, 20, Tudor Street, London, E.C.4, which we shall be happy to send to any motor cyclists who are interested.

THE MOTOR CYCLE

T.T. & SUMMER NUMBER

Will be published on

THURSDAY, JUNE 16th.

Published on the day of the Senior Race, it will form a comprehensive guide to the blue riband of the motor cycle world, including the latest news from the course, details of the competing machines, and practice lap times.

THURSDAY, 4d.

Special Features.

MOTOR CYCLES FOR THE T.T.
A FOUR VALVE ENGINE.
WEEK END EVENTS.

Belt Drive.

Since the Rudge Co. introduced its chain drive models, there have been rumours current regarding the abandonment of the well-known Multi models. These rumours are entirely without foundation.

Open Speed Trial at Westcliff.

On Thursday, July 7th, joint open speed trials will be held by the Essex M.C. and the Essex County and Southend A.C. at Westcliff-on-Sea. Full particulars and entry forms for this important event are now available, and may be obtained from Mr. Ernest J. Bass, 40, Chancery Lane, London, W.C.2. ('Phone: Museum 2234.)

Speeds through Winchcombe.

Probably no village in England figures more on the route cards of big motor cycle trials than Winchcombe, and, the streets being narrow, it is particularly dangerous on Saturdays (the favourite day for trials), when, of course, the school-children are on holiday. Mr. H. W. Barker, secretary of the local Traders' Association, asks us, on behalf of that body, to give publicity to the above, and appeals to motor cyclists to drive with great caution through the town. We feel sure that our readers—trials riders or otherwise—will comply with the request.

A Permanent Trap in Welwyn.

Owing to complaints made with regard to motor vehicles driving through the village of Welwyn, which lies north of Hatfield on the Great North Road, the Chief Constable of Hertfordshire is placing a permanent control, and intends to prosecute motorists against whom a *prima facie* case of driving to the common danger is established.

We greatly admire the sportsmanlike attitude of Colonel Law, the Chief Constable of the County of Hertfordshire, in bringing this fact to our notice. He states: "I am satisfied that in many cases the offences are due more to thoughtlessness than to wilful disregard of the law; and, as I am anxious that only the careless and inconsiderate drivers shall be prosecuted, I shall be glad if you will give the matter publicity."

Stile Kop.

We hear that it has been decided by the authorities concerned not to grant permission for future hill-climbs on Stile Kop, near Rugeley. It is considered that modern motor cycles are too fast for the hill.

The Five Hundred Mile Race.

Supplementary regulations for the 500-mile race at Brooklands on July 2nd are now available from the secretary of the B.M.C.R.C., The Mill House, Warlingham, Surrey. Entries, with racing colours, cost £2 12s.

The Price of Petrol.

The drop of sixpence in the price of petrol last week came as a disappointment to those who expected the fall to be a shilling; but 2s. 6d. petrol may yet be available before the year is out. Present prices are: No. 1, 2s. 11½d.; No. 2, 2s. 9½d.; aviation 3s. 3½d.; and benzole, 3s. 5½d. Thus for the first time we see petrol substantially cheaper than benzole. Notwithstanding, those who prefer the home-produced fuel will still continue to use it, as there must be a further reduction in the price of petrol before it really becomes appreciably cheaper in miles per gallon.

A Sporting Trial Midst the Surrey Hills.

Owing to the clashing of other important events, only a small number started for the Mellano Cup Trial of the New Surbiton and District M.C.C. on Saturday, the results of which follow:

MELLANO CUP (50 gns.), for Best Non-stop Performance.—W. G. Boyer (3½ Norton), total error, 15s.

COULSON CUP (12 gns.) for Best Performance of any Lightweight up to 350 c.c.—F. E. Salter (2¾ Zenith), total error, 50s.

SILVER MEDALS (for a Non-stop Run, and for the loss of not more than 5 marks): C. Michaelis (6 Zenith), E. L. Showell (5-6 Martinsyde), W. A. Hobbs (8 Zenith), H. F. Edwards (2¾ Coulson-B), P. R. Dowson (2¾ Hawker), T. O. M. Sopwith (2¾ Hawker), R. B. Clark (2¾ Coulson-B), W. J. Kelly (3½ Norton), W. Julian (7-9 Harley-Davidson sc.), and L. Bachalier (6 A.J.S. sc.).

BRONZE MEDALS (for the loss of not more than 15 marks): J. P. Marvin (8 Broogh Superior sc.), F. J. P. Dioney (3 A.B.C.), J. S. Bennett (2½ Metro-Tyler), and C. Crossthwaite (3½ Duzmo).

Screw Road.

A party of Pwllheli motor cyclists last week visited the corkscrew hill known as Screw Road. D. Thomas, on a 4¼ h.p. B.S.A., claims the honour of being the first Welshman to make a clean ascent. We understand that several hundred spectators from the surrounding districts witnessed the event.

Challenge to North-western Clubs.

Stockport and District M.C.C. desire to challenge any motor club affiliated to the North-Western Centre A.C.U. to a reliability trial for the Reynold Inter-club Challenge Trophy. Particulars may be obtained from Mr. E. S. Abram, 226, Manchester Road, Heaton Chapel, Stockport.

Lost Licence Holders and Number Plates.

A lost licence holder and number plate epidemic has set in. The Rev. E. G. Bird, chaplain R.N., R.N. Barracks, Devonport, has lost his licence holder near Ringwood; a trade number plate, mark HK 0148, has been lost by Lambs, of Walthamstow, between Malvern and London; and W. Jackson, jun., of 101, Greenfield Road, Denton's Green, St. Helens, is minus his combined rear plate and lamp, No. DJ 1043.

Record Public Interest in a Trial.

Several thousand spectators assembled at the start of the Newcastle and District M.C.'s all night run to Edinburgh and back on May 21st and 22nd. There were seventy-two starters, including two ladies—Miss Usher and Miss Bessie Gibson—both mounted on N.U.T. machines. Hugh Mason was also riding. Competitors used sealed watches. The Baker Challenge Trophy and specially engraved gold medal was taken by J. B. Bainbridge; whilst G. H. White, J. L. Murray, J. L. Travers, J. G. Friars, A. A. Adams, R. Astbury, and D. Hall qualified for gold medals. The two ladies were among the thirty-four silver medallists.

Twelve-hour Open Event at Glasgow.

A twelve-hour open trial will be held by the Glasgow M.C.C. on June 12th over a route including Rest and be Thankful in a non-stop section. Particulars may be obtained from Mr. J. F. Balharrie, 20, Renfield Street, Glasgow.

Motor Cycle Union of Ireland.

The annual general meeting of the Southern Centre of the Motor Cycle Union of Ireland was held on Friday last under the chairmanship of Mr. T. J. Dunphy. The report and financial statement was presented by Mr. P. Grimes. It showed a substantial balance in hand and was adopted. The new officers for 1921 were elected as follows: President, Mr. T. J. Dunphy; vice-presidents, the presidents of the Cork and District, Dublin and District, and Leicester Motor Cycle Clubs; hon. secretary and treasurer, Mr. P. Grimes; hon. auditors, Messrs. D. Doolin and F. H. Draper; representative of members, Mr. T. W. Murphy.

Sangster Cup Trial Results.

Official results of the Birmingham M.C.C. Whitsun Trial from Land's-End to Birmingham have now been announced. The premier award, the Sangster Cup, has been won by F. Short (5-6 James sc.), the gold and silver medals being awarded as follows:

GOLD MEDALS.

CLASS A (250 c.c. solo).—R. C. Bennett (2½ Federation), Gus Kühn (2½ Verus), B. Bourke (2¼ New Hudson), W. Bell (2¼ New Hudson), and G. Denley (2¼ Velocette).

CLASS B (250 to 350 c.c. solo).—C. F. Hollyoak (2½ Federal), H. V. Collins (2¾ Marloe-Blackburne), C. L. Sprosen (2½ Connaught), F. C. Parkes (2½ Sun-V.T.S.), W. L. Handley (2¾ O.K. Junior), and J. W. Parkes (2½ Sun-V.T.S.).

CLASS C (350 to 560 c.c. solo).—R. W. Duke (4 Triumph), J. R. Follows (3½ Sunbeam), S. Hall (3½ Sunbeam), R. Fellows (3½ Sunbeam), G. J. Baragwanath (3½ Sunbeam), A. W. Thrush (3½ Sunbeam), and L. Paynter (3½ Norton).

CLASSES D, E, F, and G, merged into one class (solos above 560 c.c. and passenger machines up to 1,100 c.c.).—H. Boynton (5-6 James sc.), T. Short (5-6 James sc.), T. Stevens (7 James sc.), E. J. Neal (8 Matchless sc.), F. W. Giles (7 A.J.S. sc.), H. B. Denley (10 Rhode cycle car),

SILVER MEDALS.

H. C. Jennens (3½ James), R. T. Cooke (4 Triumph), and J. Bacon (3½ Sunbeam sc.).

KEEN INTER-CLUB HILL-CLIMB IN OXFORDSHIRE.

J. W. Tolladay, who rode a well-tuned Velocette at the Oxford M.C.C. Hill-climb. He won two classes, and put up faster time than many higher-powered machines.

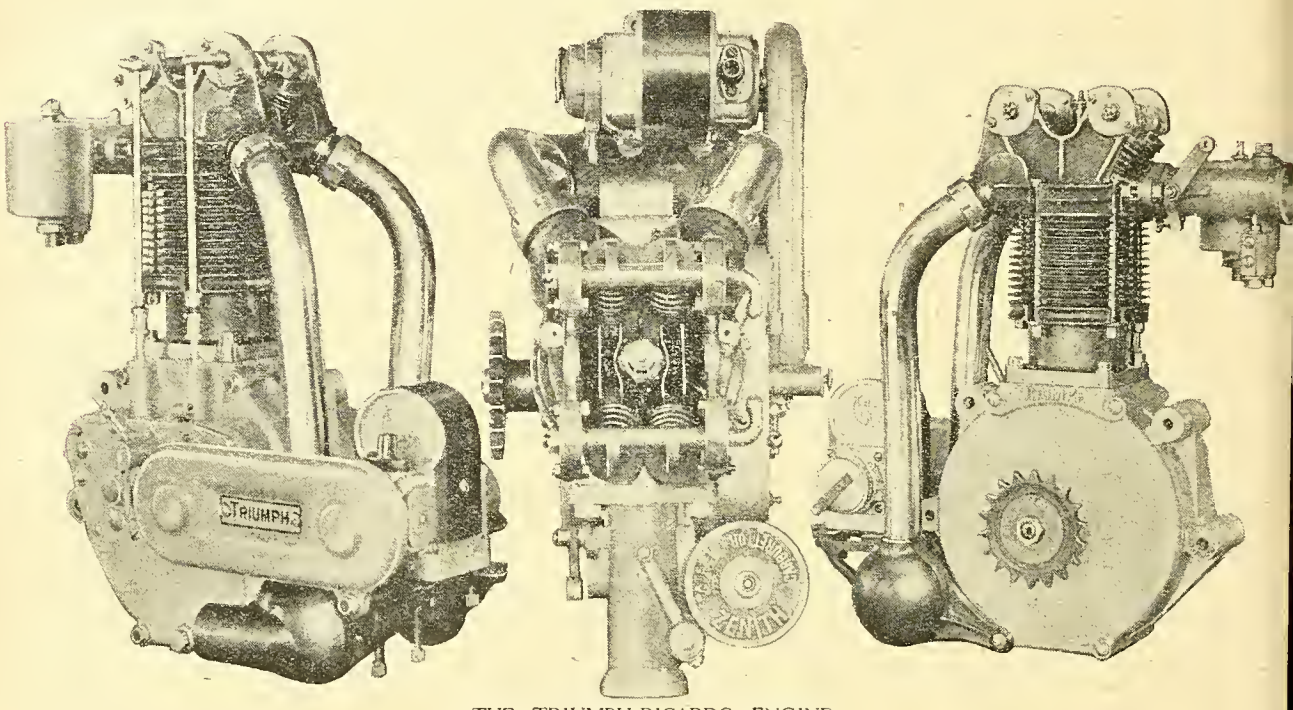
INTER-CLUB rivalry is evidently very keen in some parts of the country, for a recent challenge by the Banbury M.C. to the Oxford M.C. attracted an entry of seventy in the motor cycle and sidecars alone for the resulting hill-climb, which was held under ideal conditions at Irondown Hill, near Deddington, on Saturday. Results on time of the motor cycle, sidecar, and cycle car classes follow:

CLASS 4 (1,000 c.c. Solo).—1, A. D. Cruikshank (3½ Norton), Oxford, 36⅘s.; 2, L. B. Askew (7-9 Indian), Banbury, 37⅖s.; 3, R. J. Pigott (4 Norton), Oxford, 39s.

CLASS 5 (600 c.c. Sidecars).—1, N. V. Young (4 Triumph sc.), Oxford, 56⅗s.

CLASS 6 (Unlimited Sidecars).—1, L. Avery (7-9 Harley-Davidson sc.), Oxford, 43⅗s.; 2, E. A. Thornitt (8 Acme sc.), Banbury, 48s.; 3, S. J. Avery (7-9 Harley-Davidson sc.), Oxford, 48⅗s.

CLASS 7 (1,100 c.c. Cycle Cars).—1, G. L. Hawkins (G.N.), Oxford, 45⅕s.; 2, F. E. Wootten (10 Morgan), Oxford, 55⅕s.



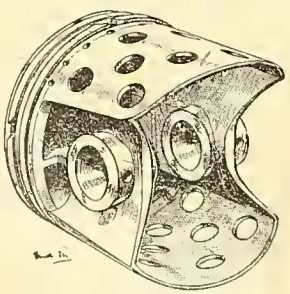
CLASS 1 (250 c.c. Solo) on Time.—1, J. W. Tolladay (2¼ Velocette), Oxford, 41⅗s.; 2, E. A. Thornitt (2¼ Levis), Banbury, 44⅘s.; 3, H. S. Askew (2¼ Cedos), Banbury, 48s.

CLASS 2 (350 c.c. Solo).—1, J. W. Tolladay (2¼ Velocette), Oxford, 42⅗s.; 2, E. A. Thornitt (2¼ Levis), Banbury, 45s.; 3, H. S. Askew (2¼ Cedos), Banbury, 47⅗s.

CLASS 3 (600 c.c. Solo).—1, A. D. Cruikshank (3½ Norton), Oxford, 36⅗s.; 2, H. S. Askew (3½ Rover), Banbury, 38⅗s.; 3, J. W. Tolladay (2¼ Velocette), Oxford, 41⅗s.

A FOUR-VALVE ENGINE FOR THE T.T.

First Illustrated Description of the New Triumph-Ricardo Single-cylinder Engine of 80.5 × 98 mm A "Mystery" Mount which accomplished 60 m.p.h. on Low Gear at Brooklands.

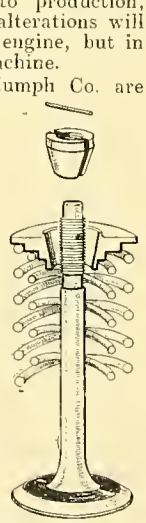


Timing gear side. THE TRIUMPH-RICARDO ENGINE Plan view. Driving side

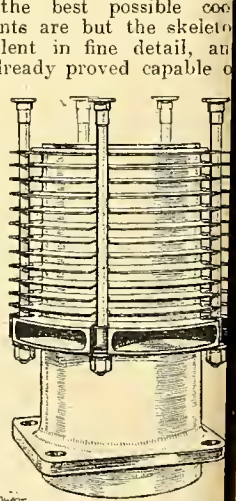
EVER since it was first known that the Triumph Cycle Co. had nominated a team for the 1921 Senior Tourist Trophy, an air of mystery has surrounded the entry. For some years past the 550 c.c. 4 h.p. engine has been the main production of the Coventry factory, and, since this type is too large to comply with the A.C.U. limits, considerable public interest has been evinced in the design of the new 500 c.c. mount.

We are now for the first time able to lift the veil, and disclose perhaps the most interesting machine which has ever left this world-famous factory.

The present engine, so far as the cylinder and valve gear and parts above the crank case are concerned, has been entirely redesigned by Ricardo and Co., Ltd., under the supervision of Mr. H. R. Ricardo. The modifications comprise ideas which embody the most up-to-date internal combustion engine practice.



Complete with gudgeon pin and rings, this aluminium piston weighs only 14 ozs



It must be understod that the engine is still in the experimental stage, and that, before it is put into production, several further important alterations will be made, not only in the engine, but in other vital parts of the machine.

We gather that the Triumph Co. are entering the new engine as their second string, with a view to obtaining such valuable information as only a prolonged road race can provide, and that the Senior T.T. will form part of the strenuous road test to which all new Triumph models are subjected before being offered to the public.

Attention has been concentrated in this design upon obtaining and maintaining the greatest b.h.p. and speed revolution from an engine of given size, and to this end every detail has been shaped. Thus we find a machined steel cylinder to avoid warping through uneven thickness of metal; an aluminium piston to reduc reciprocating mass and to ensure tha heat can flow away from the vital places multiple overhead valves of light recipr cating weight, seating in a special cyli der head approximately hemispherical i shape for efficiency, and so constructe as to provide the best possible coo ing. These points are but the skeleto of a design opulent in fine detail, an one which has already proved capable o remarkable performances from the angle of view of sheer efficiency. Having said that in the complete machine this engine drives a special two-speed gear box through an enclosed $\frac{1}{4} \times \frac{5}{16}$in. chain and Triumph clutch and shock absorber, and that the final drive is by chain on the right-hand side, we can now proceed to deal with the all-absorbing details, which are superbly carried out and merit

The valves have 30° seats and two concentric springs A split taper collar is used to locate the spring cup

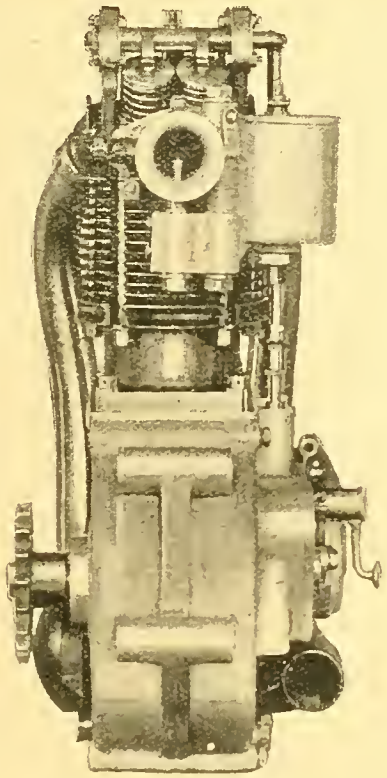
The detachable head is held by five equally spaced bolts, secured to a double bottom rib on the cylinder barrel

Four-valve Engine for the T.T.—

areful individual consideration, since ney are the outcome of some of the ost able brains in the country, and show onsiderable originality as compared with ccepted motor cycle practice.

Four Valves.

Commencing with the cylinder design, he detachable head is spigoted on to a eel cylinder, a plain ground joint being sed for retaining compression. Five ng bolts secure the head to the two west cylinder fins, which are milled out the solid in such a manner as to form gs at equally spaced intervals.



At first sight, it may provoke surprise at the lowest ribs are utilised as a point head attachment, but a little thought ill show that by the employment of this ethod, unequal masses of metal are oided on the hottest portion of the arrel.

Three circumferential ribs surround the se of the head, the remainder being sposed vertically. Two inlet and two haust valves are arranged in pairs at proximately 90° to each other, the rmer being contained in a common port. hile the latter are separately housed d the ports lead outwards to correspond- g exhaust pipes. The sparking plug is cated in the centre of the head.

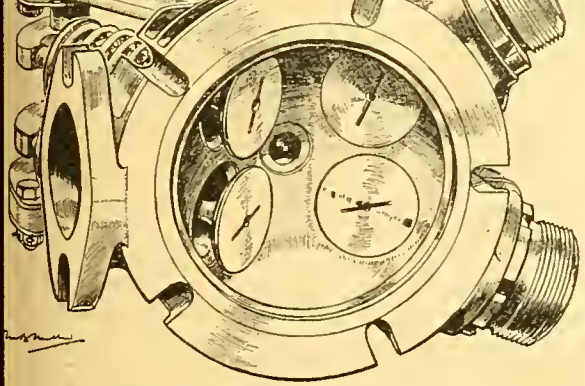
Four drilled set pins screwing into steel ashes secure the cylinder to the crank se, this method being employed to save ting the cylinder clear of the crank se studs, and thus allowing either the ad alone or the cylinder and head as a it to be removed with the engine *in u.* .45% carbon steel is used as a linder material, and the bore is ground t to 80.5 mm.

Light Reciprocating Parts.

With the exception of the fact that e crank case has a flat base forming a all oil sump, the crank case may be ssed over without comment, but it is eresting to observe that the flywheels ve been slightly decreased in overall ameter, so as to increase crank case arance and thus reduce oil friction.

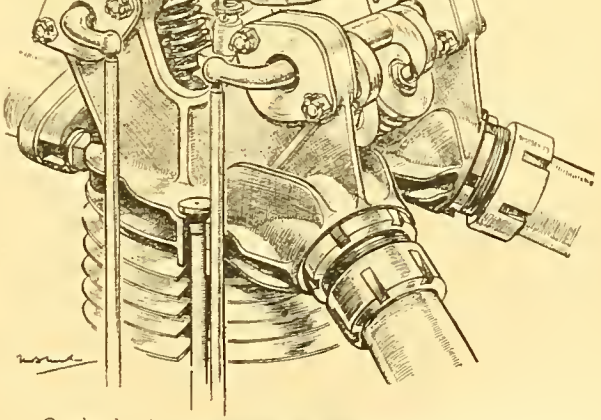
Rear view of the new engine, showing the pair of inclined inlet valves.

A standard Triumph double row roller bearing is employed for the big end, and the connecting rod is of H section somewhat wider than that fitted to previous standard models. The small end is bushed with phosphor bronze, and the 17 mm. hollow gudgeon pin is allowed to float in both small end and piston bosses, being located endways by spring rings.



A very light aluminium Ricardo slipper piston, having two narrow rings, is used, and the gudgeon pin bosses are supported close to the centre to enable a light pin to be employed. The piston, complete with rings and gudgeon pin, weighs but fourteen ounces, while the complete reciprocating weight amounts to only nineteen ounces.

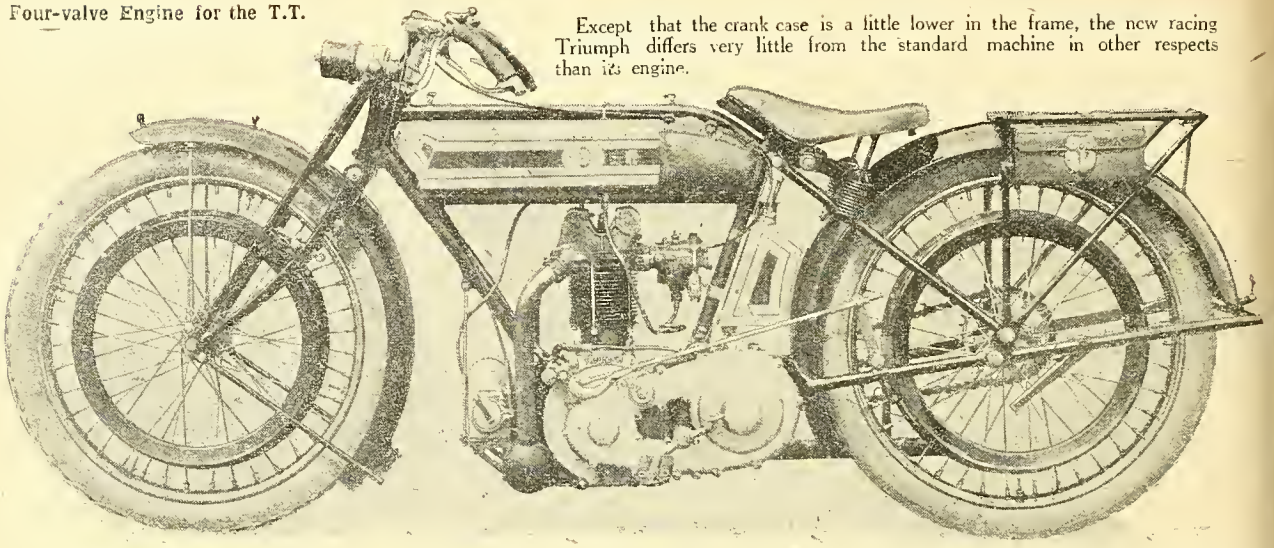
In connection with the silencing arrangements, it may be mentioned that brake tests have shown no loss of power up to 4,300 r.p.m., with expansion box and tail pipe in position.



Perhaps the most interesting feature of this unconventional engine lies in the valve gear. Primarily, it may be stated that a light rocker is interposed between each cam and tappet, and long ball-ended push-rods with adjustments at the lower ends are used to convey the motion to the one-piece nickel chrome rockers, which are carried in dustproof ball bearings housed in an extension of the head casting. Each valve, of 3% nickel steel (case-hardened), is returned by two concentric springs of only 25 lb. total tension, when the valve is seated. Separate cast iron valve guides are used; the spring cups are retained by split taper collars screwed on the stem and pinned.

Masked Inlet Valves.

Masked inlet valves on the Ricardo system are employed for the first time on motor cycles, so that their salient features may require explanation. The valve heads are sunk below the level of the cylinder head, so that the first portion of the opening and the last part of the closing action are practically ineffective. By means of special cams the valves may be gently started and gently seated, though the effective opening and closing is sudden in each case. In this connection, it may be mentioned that the valve gear is noticeably quiet in action. Several types of carburetter, both automatic and two-lever, are being used for experimental purposes, but all are of considerably larger bore than that of standard motor cycle instruments, and specially large diameter petrol pipes are employed. It has been found, however, as a result of careful experiment, that an Amac carburetter gives the most satisfactory results on this engine.



Detachable head, showing face joint and inlet valves raised. The inlet valves are slightly recessed into the head in accordance with Mr. Ricardo's patent.

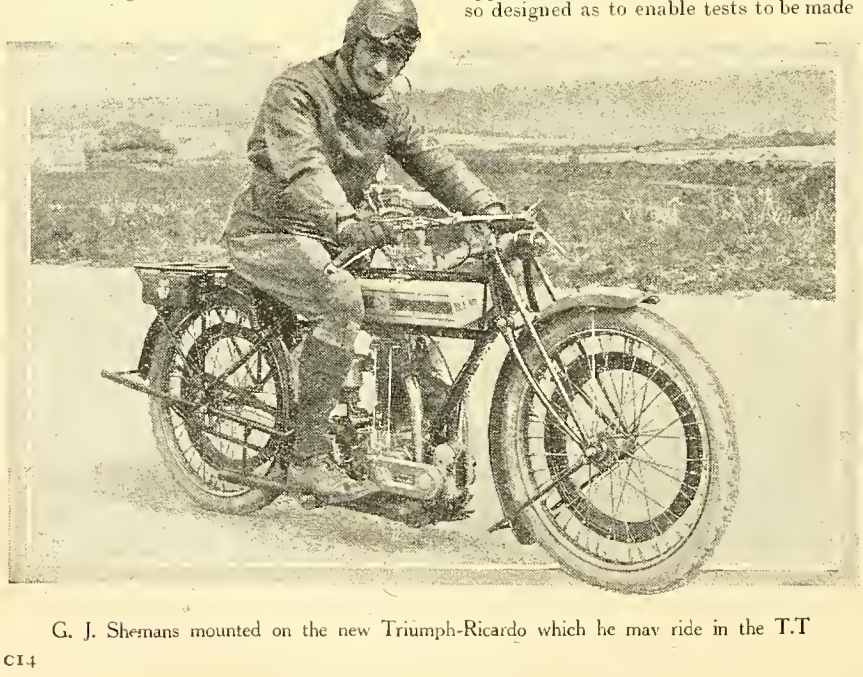
Overhead valve arrangement showing the ball bearing rocker arms and double exhaust pipes.

A Four-valve Engine for the T.T.

Except that the crank case is a little lower in the frame, the new racing Triumph differs very little from the standard machine in other respects than its engine.

Splash Lubrication.

No special system of lubrication is fitted, except for the fact that a very neat method of positive foot operation has been designed to force oil from a half-gallon tank, located behind the saddle tube, to the crank case.



After being subjected to prolonged bench tests of a most searching character, the first engine was taken to Brooklands, where it created something of a stir. We were permitted to observe certain tests, which proved most interesting.

During these trials, a lap of Brooklands was attempted on the low gear ratio of 5.6 to 1, and from a standing start an average speed of 60 m.p.h. was accomplished for a complete lap, equivalent in engine revolutions to about 4,400 r.p.m., or with slip allowance to 4,600 r.p.m. At the conclusion of the lap the engine was reasonably cool, and showed no signs of distress. The machine on which this trial was accomplished was in full touring trim, with mudguards, silencer, chain case, stands, carrier, etc., and was ridden by G. J. Shemans.

We are informed that since this time over a hundred laps at Brooklands have been covered at speeds varying between 65 and 79 m.p.h. Although these speeds appear highly creditable for a new machine, we understand that the designers are not satisfied that the maximum speed has yet been obtained. Their opinion is based upon the fact that figures from the testing works of the Ricardo Co. indicate that over 20 b.h.p. has been obtained which should certainly produce a higher maximum performance.

One is at first inclined to doubt the accuracy of such a high maximum horsepower from so small a cylinder, but we may state that we have personally had the opportunity of examining the testing apparatus, and we can affirm that it is so designed as to enable tests to be made with a degree of accuracy which is not obtainable with the type of testing gear ordinarily used.

Three of these machines will be in the Senior race ridden by G. J. Shemans, Stanley Gill, and C. Sgonina, in addition to six of the "side-by-side" type, which also has an entirely new engine. We propose to describe the more standard mount in our next issue.

G. J. Shemans mounted on the new Triumph-Ricardo which he may ride in the T.T

NEXT SATURDAY'S POOR CHILDREN'S OUTING.

Thirty Sidecars Wanted for a Charitable Work in London.

A NUMBER of sidecars are still wanted for the Poor Children's Outing next Saturday, when a member of the General Committee of the A.C.U. will entertain a party of the younger generation at his home in Hertfordshire.

Motor cyclists in the London district are invited to give a day and the services of themselves and their sidecars for this charitable work, and we feel sure that the response will provide sufficient vehicles to transport the children to the home of their host, as, at some time or another, most drivers have seen the look of envy which poor children bestow upon those children fortunate enough to have a father with a sidecar.

Regarding Saturday's trip, Mr. Loughborough, secretary of the A.C.U., writes:

"I happen to know that the children will be provided with a most enjoyable and beneficial afternoon's entertainment, and I feel sure that our members will appreciate that, by providing the necessary transport, the Union is assisting in a charitable work, the value of which is almost inestimable. Several parties of children will be entertained, and it is proposed that the first party shall visit their benefactors' home on Saturday, June 4th.

"It would seem quite practicable for members of the Union all over the country to assist occasionally in similar undertakings, and I should at any time be only too pleased to give what assistance is possible to further any such good work.

"Members who are able to give their services and the use of their sidecar machines on Saturday, June 4th, should communicate with me as early as possible in order that the necessary detail arrangements may be made."

Fifty or sixty children will be entertained on Saturday, and the venue is Kingsley Hall, Botolph Road (off Devon's Road), Bow, at 9.30 a.m.

OAKAMOOR HILL-CLIMB.

Nearly 100 Entries in A.C.U. East Midland Centre Contest. Fast Times by Lightweights.

At the summit of Oakamoor Hill, the venue of the East Midland Open A.C.U. Hill-climb last Saturday. A Wooler rider crossing the finishing line.

OAKAMOOR Hill was again the scene of a hill-climb last Saturday, organised by the East Midland Centre of the A.C.U. With an entry of ninety, the organising committee was none too satisfied, but recognised that the proximity of the T.T. drew many possible entrants in other directions.

The weather was fine at the start, with a gusty wind, and a goodly crowd had assembled to witness the start, which was timed for 2 p.m. There were many most praiseworthy ascents of the measured half-mile, and certainly excellent judgment was called for, since three gradual bends, which in pre-war days could be taken "all out," now demand caution with faster machines. As usual, Norton exponents were to the fore, notably Harold Petty (of Leicester) and H. Palin (of Derby).

Petty's machine was apparently the fleetest on the hill, for he had to cut out at least twice, and yet succeeded in accomplishing fastest time in 32s. = 56.25 m.p.h. Palin adopted a different method of cornering, for he controlled speed entirely by the throttle in contradistinction to Petty, who used his valve lifter.

Then there was a stripped P. and M. in the capable hands of G. M. Townsend: and if any doubts of the speed of a P. and M. lurks in motor cyclists' minds, Townsend's times of 33⅘s. and 34⅕s. should certainly dispel them. In short, it was an eye-opening performance, particularly as Townsend's best time was recorded on a wet course, for, sad to relate, it poured with rain for half-an-hour halfway through the classes, and sent many home wet through, for there was little shelter. Stevenson (flat twin Brough), Seal (Indian), and Vale, Andrews, and Child (Nortons) were also conspicuous for outstanding performances in the bigger classes.

Fleet 250 c.c. Mounts.

Among the lightweights no more popular and clever rider among youngsters has been seen than A. Palin (son of the Norton exponent). Palin, jun., was astride a Levis with Enfield gear, tuned to perfection. He shot off the mark like greased lightning, and took his corners fearlessly. Though he looks but a child, his age was officially given as fourteen. Another surprise packet was a 2 h.p. Matador machine of 247 c.c., ridden by Bert Houlding. The engine has two overhead valves arranged obliquely, and proved itself in good enough fettle to account for three classes, though it only appeared in two of them. For a tiny mount 35⅘s. represented a very sporting and creditable performance. J. V. Prestwich was there with a 249 c.c. side-by-side valve chain-driven J.A.P., of the 6,000 r.p.m. order. Though geared too high to get off the mark rapidly, he made up for lost time with a vengeance on the flatter stretch near the finishing tape, recording 38s. on two occasions. The results were promptly announced by K. S. Topping *via* a megaphone after the times had been clocked by J. Simmonds and A. Hodgkinson, and the details are subjoined:

The Results.

SILVER CUP (for fastest time of the day).—H. Petty (3½ Norton), 32s.

GOLD MEDAL (for fastest Derby Club resident).—H. Palin (3½ Norton), 33⅕s.

GOLD MEDAL (for fastest time by Lincoln Club member).—J. R. Sylvester (2½ Velocette), 43⅕s.

One award for the Nottingham Club member making "the fastest time on formula solo" remained in doubt, as no provision was made for formula awards. May we suggest that "the best figure of merit on time" was intended?

CLASS 9 (open solo motor cycles up to 250 c.c.).—B. Houlding (2 Matador), 36⅕s.; A. Palin (2¼ Levis), 38⅖s.; and J. V. Prestwich (2 J.A.P.), 39⅕s.

CLASS 10 (open solo motor cycles up to 300 c.c.).—B. Houlding (2 Matador), 36⅕s.; J. V. Prestwich (2 J.A.P.), 38s.; and A. Palin (2¼ Levis), 38⅕s.

CLASS 11 (open solo motor cycles up to 350 c.c.).—A. Palin (2¼ Levis) and J. V. Prestwich (2 J.A.P.), 38s.; and J. M. Heath (2¾ J.A.P.), 38⅕s. On running off the tie Prestwich improved his time to 36⅕s., Palin taking 37⅕s.

CLASS 12 (open solo motor cycles up to 500 c.c.).—H. Petty (3½ Norton), 32⅖s.; G. M. Townsend (3½ P. and M.), 34⅖s.; and H. Palin (3½ Norton), 34⅕s.

CLASS 13 (open solo motor cycles up to 650 c.c.).—H. Petty (3½ Norton), 33⅖s.; H. Palin (3½ Norton), 34s.; and T. B. G. Vale (3½ Norton), 34⅘s.

CLASS 14 (open solo motor cycles of unlimited c.c.).—H. Petty (3½ Norton), 32s.; S. Seal (7-9 Indian), 34⅖s.; and T. B. G. Vale (3½ Norton), 34⅘s.

CLASS 15 (experts barred, solo motor cycles up to 250 c.c.).—A. Palin (2¼ Levis), 37s.; B. Houlding (2 Matador), 39s.; and G. T. Povey (2¼ Velocette), 41⅖s.

CLASS 16 (experts barred, solo motor cycles up to 300 c.c.).—A. Palin (2¼ Levis).

CLASS 17 (experts barred, solo motor cycles up to 350 c.c.).—J. M. Heath (2¾ J.A.P.), 39⅖s.; A. Palin (2¼ Levis), 40⅖s.; and W. F. Norris (2¾ H.B.), 43⅖s.

CLASS 18 (experts barred, solo motor cycles up to 500 c.c.).—H. Palin (3½ Norton), 33⅖s.; G. M. Townsend (3½ P. and M.), 34⅖s.; and G. Child (3½ Norton), 35s.

CLASS 19 (experts barred, solo motor cycles up to 650 c.c.).—H. Palin (3½ Norton), 33⅖s.; G. M. Townsend (3½ P. and M.), 33⅗s.; and G. Child (3½ Norton), 34⅖s.

CLASS 20 (experts barred, solo motor cycles of unlimited c.c.).—H. Palin (3½ Norton), 33⅖s.; G. Child (3½ Norton), 34s.; and F. W. Stevenson (3½ Brough) and A. Rider (Indian Scout), 34⅖s.

All the sidecar classes were cancelled before the event, due to insufficient support.

HANDICAPPING A PAPER-CHASE.

AN innovation was introduced by the North London M.C.C., which "handicapped" their paperchase on Saturday, from Elstree to Little Gaddesden. Sidecars under 500 c.c. had ten minutes' start, sidecars over 500 c.c., and solos under 350 c.c., five minutes' start, and solos over 350 c.c. were scratch. In spite of the hares having threequarters of an hour start, they were caught by D. H. Williams (4 Indian), who started scratch, after about sixteen miles—an excellent performance. G. Bartlett (2¾ Coulson B), 5m. start, was a very close second, and proved the handicapping to be fairly accurate. A very excellent tea was enjoyed at the famous Bridgewater Arms Hotel, Little Gaddesden. Next day a trial hill-climb was held on Kop Hill for the inter-club climb versus the North-West London M.C.C.

THURSDAY. JUNE 16th.

THE MOTOR CYCLE

T.T. AND SUMMER NUMBER

Special Articles. Guide to the T.T.

C19

95 COMPETITORS AT YORKSHIRE HILL-CLIMB.

Harrogate and District M.C.C. hold a Successful Centre Event on Otley Chevin.

ON Saturday a highly successful hill-climb was organised by the Harrogate and District M.C.C., this being the first climb held in the Centre under the new system.

The organisation was good, the weather proved kind, and the spectators who lined the hill in thousands were fairly tractable, although at times they encroached on the course.

The only serious fault was the state of the road surface which, in places, had been badly cut up during the previous week. Three riders fell, and one, L. A. Runton, riding an A.B.C., was rather badly cut and shaken.

Only two of the ninety-five competitors failed to turn up for their numbers, although for various reasons some few more did not face the starters.

The results are as follows, the special prize awards being subject to confirmation :

350 c.c. SOLO.—*Amateurs:* 1 and special, B. B. Bointon (2¾ Coulson-B.), 1m. 10⅘s. *Trade:* 1 and special, B. Parkinson (2¾ Douglas), 56⅘s.; 2, N. Woolley (2¾ Beaumont), 1m. 8s.; 3, W. R. Brooks (2¾ Blackburne), 1m. 12⅘s.

560 c.c. SOLO.—*Amateurs:* 1 and special, L. Padley (3½ Norton), 41⅘s.; 2, E. Searle (3½ Sunbeam), 42⅘s.; 3, G. A. Nunneley (3¾ Scott), 1m. 16⅘s. *Trade:* 1 and special, R. T. Cawthorne (3½ Norton), 41⅘s.; 2, F. Reynard (3½ Sunbeam) and J. E. Clayham (4 Triumph), 45⅘s., tied.

Although over sixty years old, T. W. Monkhouse, who holds many pedal cycle records, made a very creditable performance on his Triumph.

750 c.c. SOLO.—*Amateurs:* 1, L. Padley (3½ Norton), 41⅘s.; 2, E. Searle (3½ Sunbeam), 43⅘s.; 3, G. A. Nunneley (4 Indian Scout), 1m. 5⅘s. *Trade:* 1, F. Reynard (3½ Sunbeam), 42⅘s.; 2, J. E. Clayburn (4 Triumph), 45s.; 3, W. Backhouse (4 Triumph), 48⅘s.

UNLIMITED SOLO.—*Amateur:* W. H. Rodes (7-9 Indian), 38⅘s., the only one to start. *Trade:* 1 and special, F. W. Dixon (7-9 Harley-Davidson), 35⅘s., fastest time of the day; 2, F. Reynard (3½ Sunbeam), 41⅘s.; 3, P. Barron (7-9 Indian), 43s.

560 c.c. PASSENGER MACHINES.—*Amateur:* 1, L. Padley (3½ Norton sc.), 1m. 2⅘s.; 2, R. Brown (3½ Norton sc.), 1m. 3⅘s.; 3, T. Monkhouse (4 Triumph sc.), 1m. 31⅘s. *Trade:* 1, R. T. Cawthorne (3½ Norton sc.), 54⅘s.; 2, G. Hill (3¾ Scott sc.), 1m. 18⅘s.; 3, W. E. Grange (3½ Norton sc.), 2m. 17⅘s.

750 c.c. PASSENGER MACHINES.—*Amateur:* 1 and special, L. Padley (3½ Norton sc.), 57⅘s.; 2, R. Brown (3½ Norton sc.), 1m. 0⅘s.; 3, W. Wells (3½ Norton sc.), 1m. 14⅘s. *Trade:* 1 and special, R. T. Cawthorne (3½ Norton sc.), 48⅘s.; 2, G. Hill (3¾ Scott sc.), 1m. 14s.; 3, W. E. Grange (6 Bradbury sc.), 1m. 24⅘s.

UNLIMITED PASSENGER MACHINES.—*Amateurs:* 1, N. Longfield (7-9 Indian sc.), 51s.; 2, L. Padley (3½ Norton sc.), 57s.; 3, R. Brown (3½ Norton sc.), 1m. 0⅘s. *Trade:* 1 and special, F. W. Dixon (7-9 Harley-Davidson sc.), 42⅘s.; 2, R. T. Cawthorne (3½ Norton sc.), 47s.; 3, P. Baron (7-9 Indian sc.), 49⅘s.

A special prize is awarded to Miss Monkhouse, who made the fastest ascent on a passenger machine (lady drivers only). She rode a Triumph, and her time was 1m. 34⅘s.

Consolation prizes to Mrs. Watts and G. A. Reed.

SPECIAL CLUB PRIZES.—*Amateur:* G. A. Nunneley. *Trade:* W. E. Grange.

A successful New Imperial rider, E. J. Anderson, taking a corner at the Essex County and Southend A.C. Hill-climb at Thundersley Church Hill last Saturday.

ESSEX COUNTY & SOUTHEND A.C. HILL-CLIMB.

FROM the motor cyclist's point of view, the hill-climb organised by the Essex County and Southend A.C. at Thundersley Church Hill, Essex, was not so interesting as it might have been had the entries been more numerous in proportion to the cars. Nevertheless, some good speeds were witnessed and creditable performances recorded, notably those of E. J. Anderson on a 2½ h.p. New Imperial, who secured first place in the first three events. The results are as follows :

350 c.c. (Touring).—1, E. J. Anderson (2½ New Imperial), 23⅘s.; 2, E. C. Baldwin (2¾ Douglas), 28⅘s.; 3, R. C. Barnes (2¾ Douglas), 30s.

350 c.c. (Sports).—1, E. J. Anderson (2½ New Imperial), 24⅘s.; 2, F. R. Cotgrove (2¾ Wooler), 29⅘s.; 3, R. Weatherell (3 R.W. Scout), 31s.

600 c.c. (Touring).—1, E. J. Anderson (2½ New Imperial), 26s.; 2, R. O. Coneher (3½ Sunbeam), 28⅘s.; 3, B. A. Bennett (3½ P. and M.), 29s.

600 c.c. (Sports).—F. Jeffery (3½ P. and M.) and A. J. Turnbull (4 Triumph), 28s., tied for first place; 2, F. R. Cotgrove (2¾ Wooler), 28⅘s.

UNLIMITED (Members).—1, A. L. Turnbull (4 Triumph), 29⅘s.; 2, F. R. Cotgrove (2¾ Wooler), 29⅘s.; 3, R. W. Weatherell (3 R.W. Scout), 30⅘s.

SIDECARS (600 c.c. and Unlimited).—1, S. D. T. Croneen (7-9 Harley-Davidson), 32s.; 2, H. G. Stewart (4 Triumph), 34⅘s.; 3, H. G. Stewart (8 Zenith), 42s.

THE CLUB CHAMPIONSHIP FOR 1921.

The Fourteenth Inter-club Team Trial for "The Motor Cycle" Cup.

By nominating a team for the M.C.C. Team Trials on Saturday, June 25th, the clubs of this country have a chance of winning the Club Championship for the year. Entries, which close on Saturday next, will be limited to thirty teams.

The Motor Cycle Challenge Cup for the Club Championship. At the present time both the M.C.C. and the Coventry and Warwickshire M.C. own two shares. Last year it was won by the Leicester and District M.C.

FOR the fourteenth year the M.C.C. will organise the Inter-club Team Trial for the Challenge Cup presented by the proprietors of this journal. The competition is between club teams for what has long been established the club championship of the year.

Each team consists of six riders, three driving motor bicycles and three passenger machines, such as sidecars or three-wheeled cycle cars. A passenger must be carried. The joint weight of passenger and driver must not be less than twenty stone.

The course is 100 miles in extent, which will be covered non-stop three times in succession. Sufficient fuel and oil must be carried for the complete journey. Competitors may replenish from a metal receptacle carried with them provided the replenishment is effected by the *driver* while the machine is in motion. Fuel and oil must be carried from the start, and must not be taken up after starting.

Each lap must be covered at a speed of between 17 and 20 m.p.h. Each rider may, therefore, set his own time within the limits for the first circuit, and should aim at repeating this exactly on each subsequent occasion.

Improved Regulations.

Should more than one team complete the course intact, the order of merit shall be determined by consistent running on the three circuits. If no team completes the course, the number of miles accomplished by each rider of each team without stoppage will be added together, and the team scoring the highest mileage will be accounted to be the winner.

The rules are practically the same as they were last year, but there will be one or two important additions. *Entries will be limited to thirty teams*, so that there is not too much congestion on the course, and the first thirty teams sending in their names will be accepted, while any subsequent applications will have to be refused.

A new rule is that concerning the carrying of numbers by competitors who have had an involuntary stop. If a rider has to stop for any other reason than the exigencies of traffic he is counted as having retired, and must remove his number plates at once and leave the course as soon as possible. Considerable trouble and confusion was caused to officials last year by competitors continuing to ride round after having stopped, and this year, under the new rule, any competitor who has experienced a stop and passes the timekeeper still wearing his numbers will involve disqualification for himself and his whole team as well.

Starting Order.

The following will be the order of starting: first, the Leicester and District M.C.C. (who won the cup last year); second, the Surbiton and District M.C.C. (second last year); third, the Worcester and District M.C.C. (third last year). All these teams made non-stop runs in 1920. They will be followed by the Coventry M.C.C., who made the next best time, and then by other clubs.

Every team must supply two observers.

The judges will be Captain Geoffrey Smith, M.B.E. (representing the donors), Mr. L. A. Baddeley (representing the Motor Cycling Club), and a judge nominated by the A.C.U. Mr. W. Cooper will be chief marshal.

Entries cost £3 3s. per team, and, as stated before, close on June 4th. They should be sent to Mr. Southcomb May, 34, Gower Place, London, W.C.1.

Below we give in tabular form a brief history of the Club Championship Trials:

DATE.	NO. OF TEAMS COMPETING.	CHAMPION CLUB.
1904	5	Coventry M.C.
1906	5	Motor Cycling Club.
1907	5	Coventry M.C.
1908	9	Coventry M.C.
*1909	17	Motor Cycling Club.
1910	18	Coventry and Warwickshire M.C.
1911	20	Derby and District M.C.C.
1912	25	Nottingham and District M.C.C.
1913	41	Sheffield and Hallamshire M.C.C.
1914	31	Motor Cycling Club.
1919	15	Coventry and Warwickshire M.C.
1920	28	Leicester and District M.C.C.

* In 1908 the Coventry M.C. won the first cup outright, and the proprietors of *The Motor Cycle* presented a second trophy, in which the Coventry and Warwickshire M.C. and the Motor Cycling Club each holds two shares.

VICTORY WORTH EARNING.

"WHAT would the American riders and promoters think if they were compelled to follow the English system? If we were one-quarter as thorough in organising our runs and checking up on the competitors as they are over there, we might have some cause to feel that there was more work than fun in it, at least for the officials.

"The English system has much to recommend it despite the extra work involved. When the results of one of their reliability runs are published, they mean something. The winner knows he has earned his medal and so does everyone else. This is so well understood that, our correspondent declares, the winning of one or two of the prominent events of the year is sure to mean the commercial success of the winning machine, even though it may be a comparatively newcomer in the field."—*Motor Cycle and Bicycle*, New York.

AN INTER-CLUB HILL-CLIMB.

The Wallington and District M.C. and L.C.C. v. The Public Schools M.C.C.

C. M. Bowen (Norton) awaiting the word to go in the inter-club hill-climb between the Wallington and District M.C. and Light Car Club and the Public Schools M.C.C.

FREQUENT heavy showers delayed the start of the inter-club hill-climb, arranged between the Wallington and Public Schools Clubs.

Breaks in the continuity of the programme were also occasioned by traffic on the hill. The events were run off on time only; three marks being awarded to each club for a first place, two for a second, and three for a third, while the competitor who made the fastest time of the day scored an extra three marks for his club. Competitors were given a flying start, and the timing was arranged by field telephone, which after a few minutes' timing worked faultlessly throughout the competition. The time-keeper was Mr. F. T. Bidlake.

CLASS 1 (not exceeding 275 c.c.).—1, J. S. Worters (2¼ Velocette), 49s., Public Schools M.C.C., 3 points; 2, E. S. Campbell-Cooper (2¼ Cedos), 1m. 4s., Wallington M.C. and L.C.C., 2; 3, H. Symonds (2½ Cedos), 1m. 21s., Wallington, 1.

Symonds's stand fell down after the start and caused him some trouble and delay.

CLASS 2 (not exceeding 350 c.c.).—1, A. A. Prestwich (2¾ Dot-Jap), 27s., Public Schools M.C.C., 3 points; 2, H. Symonds (2¼ Cedos), 50s., Wallington M.C. and L.C.C., 2; 3, G. H. Symonds (2½ Levis), 1m. 10s., Wallington M.C. and L.C.C., 1.

The last-named rider, who finished third, failed in Class 1. Prestwich arrived without mudguards, but was allowed to start on fitting one to the front wheel.

CLASS 3 (for motor bicycles not exceeding 500 c.c.).—1, B. S. Allen (3½ Norton), 31⅘s., Wallington M.C. and L.C.C., 3 points; 2, W. H. Sheraton (3½ Norton), 32s., Wallington M.C. and L.C.C., 2; 3, A. N. A. Hewett (3½ Sunbeam), 32⅘s., Wallington M.C. and L.C.C., 1.

CLASS 4 (not exceeding 750 c.c.).—1, A. N. A. Hewett (3½ Sunbeam), 31s., Wallington M.C. and L.C.C., 3 points; 2, B. S. Allen (3½ Norton), 31⅘s., Wallington M.C. and L.C.C., 2; 3, C. Volk (3½ Sunbeam), 31⅘s., Wallington M.C. and L.C.C., 1.

Hewett scored an extra three points for his club by making the fastest time of the day. Charlesworth, riding a Zenith for the Public Schools Club, would have probably gained a place but lost time by closing his throttle accidentally just before crossing the finishing line. Dobson (3½ Norton), Wallington M.C. and L.C.C., fell on the lower portion of the hill.

CLASS 5 (not exceeding 1,000 c.c.).—1, A. N. A. Hewett (3½ Sunbeam), 31⅘s., Wallington M.C. and L.C.C., 3 points; 2 (tie), W. H. Sheraton (3½ Norton), 32s., Wallington M.C. and L.C.C., 2 points, C. Volk (3½ Sunbeam), 32s., Wallington M.C. and L.C.C., 1; 4, R. C. Charlesworth (6 Zenith), 32⅘s., Public Schools M.C.C.

CLASS 6 (sidecar outfits not exceeding 1,000 c.c.).—1, B. S. Allen (3½ Norton sc.), 39⅘s., Wallington M.C. and L.C.C., 3 points; 2, R. C. Charlesworth (6 Zenith sc.), 42s., Public Schools M.C.C., 2.

It will be seen that the Wallington Club won easily, gaining thirty points and four events, while the Public Schools M.C.C. only gained the first two events and a second in the last.

WESTERN M.C.C. (GLASGOW).

UNDER the auspices of the Western M.C.C., a very interesting team trial was held on the 21st ult. for the "John Bull" Trophy, held by the Edinburgh M.C.C. Starting at Amulree Hotel, competitors had to ascend the hill of that name, thence *via* Kenmore and Aberfeldy back to the starting point, covering this circuit twice non-stop. Chief interest centred in the ascent of Amulree, and very few failed to climb this famous hill. Excellent ascents were made by A. J. C. Lindsay (Scott Squirrel) and D. S. Alexander (3½ Norton). J. W. Adamson, who used to make fine climbs of Amulree in the single-geared days, also made a good ascent on a 4 h.p. Triumph. In the sidecar class Mrs. Bell (7 A.J.S. sc.) gave a finished display, while Downie (on a similar combination) was also good. G. Hope Wilson (7-9 Indian sc.) made a fast ascent, as did R. S. Macrae (7-9 Harley sc.). Several Norton sidecars also made good climbs.

The winners turned out to be the Falkirk M.C.C. team, consisting of W. Sinclair (3½ Norton), T. Climie (6 A.J.S.), Mrs. D. Bell (7 A.J.S. sc.), and A. Neilson (7 A.J.S.), with a total mileage of 207½. The second team was Western M.C.C. No. 2: T. McCreadie (3½ Sunbeam), A. D. S. Barr (3 Barr and Stroud), R. Brown (7 A.J.S. sc.), and M. Fraser (7 A.J.S. sc.); mileage 202½.

OPEN SPEED TRIALS AT MORECAMBE.

VISITORS to Morecambe this month will have an opportunity of witnessing some high speeds on the promenade, for the North-Western Centre A.C.U. is organising its open speed trials to take place on the 18th, the Saturday following the T.T. races. There will be six classes for solo machines, and five for sidecars, and one each for three-wheel and four-wheel cycle cars. Each class will be in two sections. General and expert barred. The first event is due to start at 11 a.m.

Several very important trophies are offered for competition, including the Reliance Speed Challenge Cup, at present held by G. Dance; the Baxter Memorial Cup for the best performance by a private owner member of the Liverpool M.C. residing within fifty miles of Liverpool. In each class there will be three prizes provided there are fifteen entries.

Entries close on Tuesday morning next, and should be sent to J. H. Place, 8, Dugdale Road, Burnley.

Colmore for "choice"

To the ardent Motor Cyclist, it is the wonderful choice of machines available at the Colmore Depot which always brings him to us whenever he wants a new mount. He appreciates the varied selection and the infinite amount of pains taken to ensure that the motor cycle he selects exactly meets his requirements. Among that selection, this week, we would bring to your notice two machines of unusual merit:

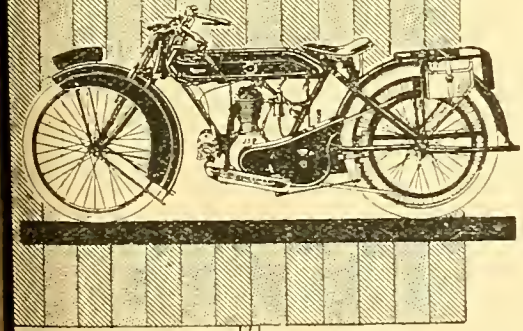
Douglas.

2¾ h.p. Two-speed All-on Model £85
2¾ h.p. Three-speed All-on Model .. £105
4 h.p. Three-speed All-on Sidecar Outfit £170

Matchless.

"Popular" Combination Model £174
Standard Combination Model £205
Family Combination Model (2-seater Sidecar) £212 10

To have kept all our old friends for many years, and to have secured a daily increasing host of fresh ones, is surely eloquent testimony of their enthusiastic appreciation of the Motor Cycle Service we strive to give to *all*, not only in our large selection of machines, but also in Spares, Accessories, and Repairs.



Remember that varied choice we offer you, and, in giving any preference, let it always be—

COLMORE FOR "CHOICE."

Delivery Immediate. Price 80 Guineas

The "Federation" J.A.P. cannot be properly appreciated unless you have all the details of its construction before you. It is a Lightweight Sporting Tourist machine of highly exceptional merit, for, despite its light weight it provides very many comforts that are otherwise reserved to the high-powered heavies. It is of a design that is bound to please established motor cyclists, and also has many features that make it an unrivalled mount for the novice. Please write us for fully illustrated 16 page booklet, which we will gladly send.

The ideal lightweight outfit.

Send now for the Dunhill Illustrated Catalogue of Sidecars. Simply tear out this advertisement, write your name and address in the margin, and post to us.

ALL Dunhill Sidecar Chassis embody the triangular frame design of which we were the original patentees (No. 4784/15). This design gives the strongest possible chassis which is yet exceedingly light in weight. Dunhill Chassis satisfactorily do the work of other chassis more than twice their weight.

Obviously, then, the Dunhill patent triangular design materially reduces running cost and enables you to get better service from your sidecar outfit. The triangular frame design is described and illustrated very carefully and thoroughly in our catalogue, copy of which we shall be happy to send on request.

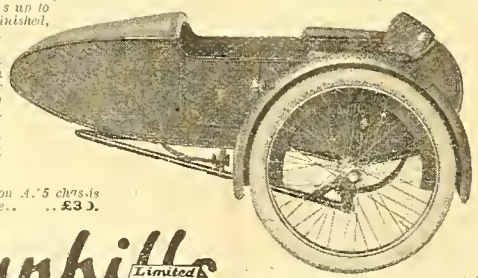

Illustration shows our Model A.55 Underslung Lightweight Chassis. This chassis is suitable for use with machines up to 3½ h.p. The patented triangular principle upon which it is constructed gives exceptional strength and rigidity combined with minimum weight. Frame distortion is totally impossible. It gives a low and comfortable riding position.

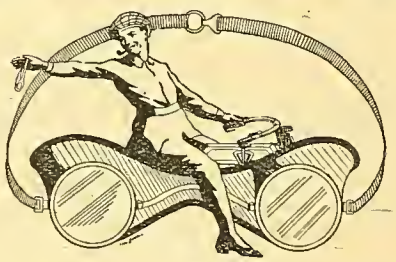
The three-point attachment fittings are machined from the solid steel bar, thus eliminating all risk of breakage at these points.

Price of chassis is only **£18.**

Dunhill Lightweight body, model B.36, suitable for machines up to 4 h.p. Smartly finished, attractive design, strongly made very light in weight, with ample room for tools and duty of legroom. With or without door. Standard colour green upholstered leather cloth to match.



Price, mounted on A.55 chassis as described above.. .. **£30.**

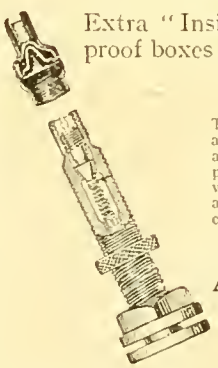
What should a Tyre Valve be?

It should be airtight;
It should be easily inflated;
It should allow you to test the air pressure in the tyre;
It should be simple in construction;
It should be dustproof;
It should be made in standard sizes.



All of these qualifications are embodied in the

Schrader Universal TYRE VALVE

The spring "Inside" is the finest air retainer in the world. The slotted cap can be used as a key to remove or replace "Insides." Testing by pressure gauge is a most simple operation. It is the only Tyre Valve made in one piece. There are no joints—no weak spots.

There is a "Schrader" Tyre Valve for every type of wheel.

Extra "Insides" are obtainable in dust-proof boxes of five from all good dealers.

CONVERSIONS

The valves on your present tyres—if not already "Schrader Universals"—can be adapted to the "Schrader Universal" principle at a trifling cost. And then you will have no inconvenience from leakages arising from perished valve rubbers or other causes. Write to us for particulars.

Illustrated Booklet post free.

BRITISH EXCELSIOR
Motor Cycles. — All Models.

For Business, Pleasure, or Health the motor cycle is a sound investment

Cheaper than train, much more convenient, for you can travel when and where you please—no waiting—no crushing—the open road is at your command with all its health and beauty.
If you are a family man and desire to carry passengers and luggage, and are looking for the acme of comfort for yourself and family, then the famous 7 h.p. A.J.S. Combination should exactly suit your needs. The A.J.S. is generally admitted to be *the* sidecar outfit de luxe, and the internal expanding brakes fitted to both wheels make it absolutely safe in the most hilly country
For the solo rider and lover of speed, the 5 h.p. Zenith, with its infinitely variable gear which can be immediately adjusted to suit the gradient of any hill, should make a strong appeal; or the super-efficient 2¾ h.p. A.J.S. which offers unusual riding comfort with maximum speed and economy.
Our stock is large and varied and our prices are the lowest charged by the makers. New mounts are available from £49 10s. to £250
